Your big guide to the Acorn World Show

- Hi-res online video editing
- MIDI explained and explored
- Rainbow CD from RESOURCE

FOR ACORN RISC COMPUTERS

he ScanLight 256 scanner offers a maximum resolution of 400 dpi true 256 grey-levels at

THE CLEAR LEADER
IN SCANNING SOFTWARE
FOR THE ARCHIMEDES

full 105mm width. In addition there is support for monochrome, 16 grey level and 256 grey-level scanning at 100, 200, 300 and 400 dpi. The latest scanner model offers a convenient one-touch scanning button and a unique overscan buzzer which gives an audio warning when you are scanning too fast. A handy ruler is also supplied to ensure perfectly straight scans. The ScanLight software offers several unique facilities that make it the leader in its field - e.g. the ability to provide all picture processing and enhancement functions with only the one original copy of the image in memory - vital since scanned pictures require a great deal of memory.

The perfect way to capture high quality pictures for inclusion in DTP or practically any other RISC OS application.

The ScanLight software offers

Instant image rotation by any angle.

Support for the RISC OS 3 true 256 grey-level sprite format.

Only one copy of the image in memory at once.

On the fly screen dithering for maximum image quality.

A selection of sampling sizes from 2x2 to 8x8.

Image enhancement facilities such as sharpening, edge detect etc.

Simple brightness and contrast controls.

Spline curve control over grey-map for additional control.

ScanLight 256 scanner, guide ruler, interface board, manual and software;
For the 300/400/5000 & Risc PC: £129.00 + VAT (£151.57 inc)
For the 30X0 and 4000 internal card: £139.00 + VAT (£163.32 inc)
Specify machine type when ordering. Requires 2MBytes. No carriage is charged.
You can purchase a second card for any Acorn model for just £39.00 + VAT (£45.82 inc) - no need to move the

board when you want to use ScanLight on a second machine.

Computer Concepts Ltd

THE FAR SITED OPTION!

f your site has more than three machines

then a site licence might be your best option.

Site licences were originally designed with schools in mind, but they work equally well for any organisation that has several machines on one site. The exact number at which a site licence becomes economical varies with the product, but if your site has more than three machines then it's worth investigating further.

Impression Publisher, Impression Style, TurboDrivers and ArtWorks are the most popular licences. The software can be supplied for use over networks or on stand alone machines (same price, hut please specify). Network licences are AUN Impression Style £350+VAT (£411.25 inc)

Impression Publisher £440+VAT (£517.00 inc)

ArtWorks £440+VAT (£517.00 inc)

TurboDriver & LaserDirect network spooler £149+VAT (£175.07 inc)

We have site licence arrangements for most other software products. Please ask for details.

Computer Concepts Ltd

The licence fee includes one complete package with manuals. The current purchase price of a single copy, if one is already owned and registered, can be offset against the fee. The licence covers up to 20 machines, but for the larger sites additional units of 10 can be bought at a later date

or Nexus networks.

Think of it this way; if your site has 20 machines, an Impression Puhlisher network licence works out at £22 per copy, when the RRP is £129. We're sure you will agree that this pricing is attractive, which is why 4000+ sites have Computer Concepts licences.

Unless you've just arrived from Mars you'll no doubt be aware that the Acorn World show is the happening thing at the beginning of November.

In this issue we're providing the most up to-date guide to whose there and what they'll be showing at the new Olympia venue.

In the interviews and chats we've had with the Acorn staff it's clear that they're just as excited about the show as the rest of us and it does promise to be packed with amazing new products — and I don't just mean the StrongARM.

Battle has been joined in the video editing arena with Eidos wading back into the fray with the StrongARM power and Irlam's fantastic quality Videodesk system — offline video editors have only two decent low cost choices and they're both Acorn.

If we take all the niches there'll be nowhere for our opponents to retreat to when the Net Computer hits them from the front.

What did you do in the web-war?

HOW TO ORDER

Carriage is free within mainland UK if you pay on ordering.

Cheques should be made payable to lan Copestake Limited.

You may also pay by *credit card*, *debit card* or *switch*. We normally make *no charge* for this, and take no payment until goods are despatched. We need your address as known to the card issuer, the card number and expiry date, and the valid from date and issue number if any.

If you leave an order on our answering machine please include your telephone number, your card details as above, and your calculation of the total payment due.

Official orders are welcome from UK edu-cational and government institutions (invoices are due for payment within 14 days and are subject to carriage and late payment charges).

subject to carriage and late payment charges). Prices including VAT are shown in italics, followed by the price excluding VAT: eg "£11.75 £10". Zero-rated items are marked VO. Please pay the amount including VAT unless you are a VAT-registered EC customer outside the UK, in which case please quote your international VAT number. Ours is GB 595 7258.84.

Obserses armage: If you are paying by credit card we will add airmail and insurance at cost. Otherwise please add £6 (Europe) or at least £12 (elsewhere) for each software item and send a pounds sterling bank diaft payable at a London clearing bank, or Eurocheques for not more than £100 each.

All products, prices and specifications are offered in good faith and are subject to availability and change without notice. Special offers apply only while stocks last. Goods are guaranteed but we do not supply them on approval, Returns (in original packaging) and cancellations can only be accepted by prior agreement and there may be a charge to cover the costs involved.

Scantastic Deals! From the leader in Acorn scanning.

Epson GT5000, GT8500, and GT9000

A range of professional quality A4 colour flat bed scanners. Packages are supplied complete with scanner, our highly acclaimed ProImage software, leads and manual.

- GT5000, 24 bit colour, 300 dpi (optical) resolution, connects directly to bidirectional parallel port.
- GT8500, 30 bit colour, 400 dpi (optical) resolution, connects directly to bidirectional parallel port or suitable SCSI interface.
- GT9000, 30 bit colour, 600 dpi (optical) resolution, connects directly to bidirectional parallel port or suitable SCSI interface.

A quality 24 bit colour motorised scanner, with resolution up to 400 dpi (interpolated). Automatically scans flat images and can be used as a hand scanner for books. Colour scanning has never been so affordable.

Optional stitching package includes scanning guide and software to allow larger images to be scanned in strips.

Connects directly to bidirectional parallel port, and provides through connection for printers, dongles and parallel port CD-ROM drives.

- · ColourMobile package £242.05 inclusive.
- Stitching package £29.38 inclusive.

Logitech ScanMan Colour

A high quality 24 bit colour hand scanner, with resolution up to 400 dpi (interpolated). Unlike traditional greyscale hand scanners, the ScanMan Colour is fast, accurate and easy to use.

Package includes scanner, single width expansion card, our ProImage scanning software, leads and manual.

• ScanMan Colour package - £298.45 inclusive.

Packages prices are inclusive of carriage (UK mainland) and 17.5% VAT.

Please 'phone for latest pricing details on Epson GT series scanners.

For the Complete Picture...

1

Irlam Instruments Ltd, Brunel Institute for Bioengineering, Brunel University, Uxbridge, Middlesex, UB8 3PH. Tel/Fax 01B95 811401. Email: sales@irlam.co.uk

Please check suitability before ordering. You must have RISC OS 3.10 or later, a hard disc and 2Mb RAM minimum (4Mb recommended). All hardware products come with full 1 years guarantee. E & OE.

News

New Psion organisers, will Acorn follow?

PSION has introduced two new pocket computers, the Siena and the Series 3c. This news might get some optimists in the Acorn world prematurely excited. Unfortunately it's a bit early to expect StrongARM-based Psions and, so far, there is no detailed confirmation from Acorn that the new Psions will receive an Acorn Pocket Book badge. However, Acorn has mentioned in passing that it will be increasing the current Pocket Book range, which is based on the Psion Series 3a.

Siena – smaller and cheaper

THE SIENA is a smaller, lighter (183g) and cheaper alternative to the original Series 3a while the new Series 3c is much like its predecessor but adds an infra-red communication facility and has better facilities for linking up to other computers via modem or mobile phone.

A completely new design, the Psion Siena is slightly slimmer than the familiar 3a/3c case in all dimensions. It's also a fair bit lighter and feels quite at home in a shirt pocket. An unusual catch hides the battery compartment and infra-red IrDA-compliant transmitter as well as performing the function of opening and closing the clam-shell case. With the infra-red link you can beam files to and from other Sienas or the new Psion 3c without the need for a clumsy cable. An increasing number of printers support IrDA wireless printing too.

There are some sacrifices in the Siena - the screen is just half the width of a Series 3a/3c, however it retains the same dots per inch resolution, so although you only see half as much of the screen, it's still quite clear, though not back-lit. To the right of the off-set screen is a

conventionally arranged calculator keypad. You can toggle hetween a standard calculator (with virtual till-roll which can be scrolled back to see recent calculations) or the superb, if unusual, scrolling algebraic calculator, which has been a standard feature of Psion Series 3 models from day one.

The keyboard and application touch keys look familiar and though the keyboard is

With the infra-red link you can beam files to and from other Sienas or the new Psion 3c without the need for a clumsy cable

more crowded, it doesn't seem to be any less easy to use. Gone is the telephone dialler function and the sound function no longer has a record option. Sounds are synthesised rather than sampled, so they sound a little tinny. Both the new Psions have a new external cable

socket, but the Siena can't, according to Psion, be connected to either a modem or a mobile phone. There seems to be some indication that this was a deliberate ploy by Psion to avoid confusing the market and compromising the new 3c models.

Two memory sizes are available for the Siena – 512K and 1Mb. No SSD (solid state disc) slots are included, though the manual refers to an external SSD drive. All the main Series 3 built-in applications remain and the Data function now has a list view. Psion will be marketing a range of trendy alternative cases with a selection of weird and wonderful colours and designs. Smaller AAA batteries are used, but at least 40 hours of normal operation are promised by Psion.

The two Siena models are priced £169.95 inc VAT for the 512K version and £229.95 inc VAT for the 1Mb version. Psion hopes those who have been put off hy the higher price of 3a models in the past will now he tempted by the Siena. The lower price point will also be welcomed by schools, should we see a Siena Pocket Book.

Million-seller made better

PSION has concentrated on evolutionary enhancements to the tried and tested Series 3a and come up with the Series 3c - not sure what happened to 3h. The electronics work at a lower voltage and battery life has increased to around 80 hours of typical use. Like the Siena there is a new IrDAcompliant infra-red link and the new comms port is also featured. The serial communications link now operates at 57600 bits per second, three times faster than before and there is a new Psion

14.4Kbps 3Link modem to match.

The Series 3c supports OVAL, Psion's latest programming language which is compatible with Microsoft Visual Basic. Among the various tweaks to the built-in software applications there is a list view for the datahase, a 'husy' view for the Agenda diary/scheduler and the sound recorder now has an editing function. There is also a notepad function for convenient 'jotting' and a revised fde manager.

Psion is promising a full suite

of Internet applications, including Internet e-mail and a Web browser. One criticism of the original Series 3 design was its lack of support for industry-standard PCMCIA mini-card devices, like modems, for example. This has been answered via an optional PCMCIA drive which connects to the new expansion port. The two SSD drive hays are, however, retained.

Recommended prices for the 1Mb and 2Mb versions of the : Series 3c, £339.95 and £399.95

respectively inc VAT, are the same as the earlier corresponding 3a models before their recent price cut. Now that Psion's new Siena has been priced from less than half its up-market sibling, one could speculate that Acorn will be examining its Siena Pocket Book options with some enthusiasm. The old Psion Series 3a range will continue on sale for some months, but a Psion representative hinted to Acorn User that the 3a would be phased out fairly soon.

ARM unveils 810 chip

the first time at the recent Hot Chips 96 semiconductor show. The ARM810 has been somewhat over-shadowed by the ultra-fast StrongARM developed by Digital. Delivering 80mips (million instructions per second) the StrongARM is nearly three times faster than the ARM810.

Acorn has dropped plans to introduce ARM810 versions of the Risc PC in favour of the StrongARM. However, the 810 has a bright future as a higher performance alter-

ARM processors which have been acclaimed in power-sensitive applications, like portable devices. ARM revealed that the 810 consumes 500mW power at 3.3V, compared to 72mW at 3.3V for a basic ARM7 core and 900MW at 3.3V for the StrongARM.

The ARM 810 has an 8K cache and ARM says the design is optimised for cost-sensitive applications like digital televisions, PDAs (personal digital assistants) and NCs :

ARM Ltd has shown its 810 processor for : native to the original 600 and 700-series : (network computers). The ARM810 features a five-stage pipeline which enables each instruction to be executed over more cycles, reducing the amount of work done at each stage and allowing bigher clock rates. Although the higher speed increases the chip size and power consumption, performance is doubled compared to the ARM710, and ARM points out that its industry-leading mips/Watt and mips/mm2 ratios are preserved. ARM Limited's weh site is at: http://www.arm.com/

Psion StrongARM?

PSION will do nothing more: than make vague hints about their next-generation technology. They won't even confirm forthcoming products will be ARM-powered, even though they are openly working with Digital on porting their Epoc operating system development environment to StrongARM.

One thing a Psion spokesinan seemed to rule out to Acorn User was the adopof handwriting recognition. Instead, voice recognition will be the technology Psion will concentrate on, which ties in nicely with their mobile telephony aspirations. Co-incidentally, Motorola has revealed that it is working on speech processing developments involving ARM processors as well.

Psion sold 163,500 organisers in 1995, capturing a leading 32.7 per cent of the world market, according to Forrester Research figures. A million Series 3 organisers have been sold since their launch over five years ago. Nearly 20,000 of those are Acorn-badged Pocket Books. Psion PLC, tel: 0171 262 5580, fax: 0171 258 7340

StrongARM benchmarks

THERE has been considerable debate on the Internet newsgroups regarding the relative performance rating nf the StrongARM processor. This cnmes after a benchmark list was published on the Internet, placing the StrongARM inside the topten of processors tested, ahead of Intel Pentiums, and only beaten by super-RISC chips like the awesome DEC Alphas.

StrongARM is, indeed, an amazing chip, but its capabllities have to be put into perspective. The Dhrystone benchmarks quoted by the performance ranking, which was the subject of the debate, only measures integer processing performance and even then, the henchmark can be affected by the quality of the C compiler

Also, the StrongARM is a 32-bit chip compared to the 64-hit architectures of most super-RISC chips and even the Pentium CISC design. The efficiency of the overall system is not tested as Dhrystone benchmarks usually execute entirely within the host processor's cache memory. Nevertheless, Acorn quotes a figure of 204MIPS at 200MHz for StrongARM. The fastest chip on the list is 266MHz Alpha

returning almost 367mlps.

Our very own loose performance 'calculation' suggests a 30MHz ARM610 is equivalent to an Intel 486 DX2/66. An Intel Pentium 75 usually benchmarks in a system twice as fast as a 486 DX2/66. If we argue that a 40MHz ARM710 is about 40 per cent faster than a 30MHz ARM610 (benchmarked in a Risc PC) and a StrongARM is five times faster than a 40MHz ARM710, then we can work out that a StrongARM is about seven times faster than a 30MHz ARM610.

If a 30MHz ARM 610 represents half the speed of a Pentium 75 - say a Pentium 37.S, a StrongARM should equate to seven times the performance of a Pentium 37.S, or a Pentium 262.S. Ah, so a StrongARM out-performs a Pentium 200, which is the fastest available Pentium Intel yet sells. That's a very dodgy statement Indeed but fun to wind up the Wintel brigade.

The famous Internet processor benchmark list is proof of its own fallibility - it lists different Pentlum 90 systems as returning MIPS results of between 4S and 124, while a lowly Pentium 66 recorded over 100MIPS. The same rule applies to any benchmarking program - lies, damned lies and benchmark results.

(THE PROFESSIONAL DESKTOP PUBLISHER)

Ovation Pro combines fast responsive word processing with state-of-the-art page layout features to deliver the ultimate desktop publishing system. Packed with a staggering range of professional features—many available on the Acorn platform for the first time—Ovation Pro opens up a whole new world of document design. At last you can flow text inside and outside irregular frames or rotate them to any angle—in both cases the text remaining fully editable. Even with such vast range of features Ovation Pro is still easy to use, thanks to a superb user interface that makes the software easy to learn and instinctive to use.

(SUPERB FACILITIES INCLUDE:)

- ◆ Definable Button Bar
- ◆ Multi-step Undo and Redo
- ♦ Named colour system
- ◆ Definable width Pasteboard
- Frames with skew and rounded corners
- ◆ Straight and curved line drawing
- ♦ Easy-to-use active master pages
- ◆ Reads Ovation, RTF, DDF, Artworks
- ◆ Irregular frames with Bézier curves
- ♦ Drag & Drop for text and objects
- ◆ Definable colour charts
- ◆ Justification and letter spacing
- ♦ Vertical justification
- Autoflow around irregular graphics
- ◆ Context sensitive info palette
- ◆ Macro handling and script language
- Rotated text frames with editable text
 - ♦ Drag and drop between documents.
 - ♦ Automatic drop caps
 - ♦ Multi-column frames
 - Frame borders and drop shadows
 - Show invisibles
 - ◆!Chars and single-shift font change
 - ◆ Customisable with saveable changes

(FREE UPDATE)

A free update will he sent to all registered users, offering more advanced features such as full-colour and spot colour separations, image processing, auto paragraph numbering and 'local OPI' for handling large graphics bigger than the memory size.

(THE EXTENDABLE DTP SYSTEM)

Ovation Pro has advanced expansion capabilities using extension modules called Applets. These allow new features to be added without the need to upgrade the main application. Simple extensions may also be written using the integrated script language.

A range of extension applets and scripts are planned for the future.

THE OVATION PRO PACKAGE

Ovation Pro is supplied with a 300-page reference manual, separate tutorial, reference card, Bubble Help, Desktop Thesaurus 50 outlines fonts (from EFF, Acorn and Beebug) and a sample selection of clipart from DEC_dATA.

Full colour brochure available on request.

OVATION PRO costs £193.88

Upgrade from Ovation (bought hefore 27/10/95) £92.83

Upgrade from Ovation or other DTP* £116.33

*includes impression, EasiWriter, PenDown+ and Advance
Other upgrades and site licences available – please phone for details

To upgrade you should return your original disc with payment (discs will be returned).

Prices include VAT but please add £3.50 carriage
Airmail will be charged at cost to overseas customers

Beebug Ltd.

Power-tec 4x4 CD Multi-Changer

from Alsystems

Actual Size.

THE LATEST ADDITION TO THE POWER-TEC RANGE IS HERE

The Power-tec 4x4 is a fast quad speed ATAPI drive from NEC with a quality built-in multi-changer mechanism which allows you to insert four CDs simultaneously into the drive. The Power-tec software positions 4 CD icons on the icon bar allowing you to access different information from any one at any time. For example: Import some photos from one CD into your document, then access some clip art from another all at the click of a mouse. No need to keep fiddling about swapping CDs every time you want to access different information.

The 4x4 will mount easily into your RiscPC's spare 5¾ inch bay, has been thoroughly tested with StrongARM and Risc OS 3.7, and is fully compatible with PhotoCD, MPEG and audio CDs allowing you to get the most from your collection.

The Power-tec 4x4 CD Multi-Changer is available only on the Alsystems Stand (68) at Acorn World and costs just £125 exc VAT. Bring along your RiscPC for free fitting by our experienced technicians while you wait.

email: sales@alsys.demon.co.uk

NB: All prices exclude VAT and carriage. E&OE Please call Alsystems on 01420 561111 for more details Alsystems. 47 Winchester Road, Four Marks, Alton, Hampshire. GU34 5HG.

Avery ink-jet labels

ROM discs, this month it's labels for ink-jet printers. Avery Dennison's latest offering is more accurately described as labels made from specially coated paper designed specifically for ink-jet printers.

The special coating prevents the hlurring or feathering of the ink-jet image caused by paper fibres on the surface of the sheet. Supplied samples of Avery's new ink-jet labels certainly hack up the company's claims, with sharp graphics

LAST month it was labels for CD-: and well-saturated colours. Specially ROM discs, this month it's labels for coated paper for ink-iet printers has coated paper for ink-jet printers has been available for almost as long as inkjet printers have heen on sale, so it's surprising to learn that Avery is the first lahel supplier to use special ink-jet paper for its label stock. Sizes available include 8, 14, 16 and 21 labels per A4 sheet. 25-sheet packs have a recommended price of £22.99 and you're covered by a money-back guarantee.

Avery Office Lahel, tel: 01628 764 000, fax: 01628 764 110.

oyager voice-mail

VOYAGER, the Internet communications suite supplied by Argonet to its Internet subscribers has been enhanced with the addition of a voice-mail function designed to work with the company's recommended modem, the USR Sportster Vi.

The voice-mail facility, which effectively enables the modem to function like a digital answering machine, using your computer's hard disc as a recording medium, was developed in conjunction with USR and is being made available free to Argonet subscribers. It's possible that the voice-mail facility may become a commercial product in its own right at some time in

Meanwhile, the group of companies including Argonet, VTI and Eclipse are now listed on the stock market. If you are interested in purchasing shares in VTI Holdings PLC, a prospectus is now available from the company on tel: 01243 531 194, fax: 01243 531196, e-mail: vti@argonet.co.uk

Tektronix Phases in colour printers

TEKTRONIX has announced new solid-ink, or phase change colour ink-jet printers and has celchrated the news by offering buyers free supplies of black ink. The new Phaser 350 replaces the successful 340 model which was launched in March last year. The PostScript Level II printer can now operate at up to six pages per minute instead of four and the printer can he linked via Internet protocols to a suitable network so that printer status and settings can be remotely examined and adjusted using a standard Web hrowser.

Phaser solid ink printers use a wax-based dye which has to he melted and then jetted via piezo-electric

nozzles onto the print medium. As the ink is a wax, it can print on almost any material that fits safely through the printer mechanism, including some fabrics.

Tektronix also claims that, like for like, the Phaser 350 represents a 25 per cent cost saving over the outgoing 340 model. Phaser 350 prices were not actually available at press time, however. Tektronix has also announced the Phaser 300X, an A3 format printer which replaces the Phaser IIIPXi/300i, The Phaser 300X is faster than its predecessor and has improved proofing facilities.

It is priced £7,495 + VAT. Tektronix, tel: (01628) 403 640, fax: (01628) 403 653.

Xemplar catalogue

XEMPLAR Education, the joint venture between Acorn and Apple targeting the education market, has launched its first autumn catalogue. The company says the new catalogue covers solutions for preschool, primary and secondary schools and colleges and also includes partnerships with other educational resource suppliers apart from Acorn and Apple.

Brendan O'Sullivan, Xemplar Education's managing director, commented: "since its formation, Xemplar Education has been totally focused on supplying complete solutions for the classroom which enable and assist teachers in their teaching. We have developed this focus hy taking a closer look at the needs of teachers throughout pre-school, nursery, primary and secondary schools markets we know better than any other company. We then designed solutions which incorporate the particular resources required to teach in the given subject area." O'Sullivan added: "Supplying the educational market is no longer simply about selling computers to school, it is about providing everything needed to make IT most effective in the classroom. Our new catalogue presents Xemplar's commitment to this approach."

Primary schools are being offered primary Classroom Resource Packs, which include selections from a broad range of educational software and book, audio and video tape suppliers, as well as hardware from either Acorn or Apple. There is a similar formula for Xemplar Toolhox products, each of which is supplied with software, hardware and other resources tailored for various curriculum needs.

A3I

you

The new Autumn'96 catalogue is being mailed to over 40,000 teachers and IT co-ordinators around the country, but if you don't receive one you can obtain one free of charge from Xemplar direct via tel: (01223) 724262, fax: (01223) 724300, e-mail: info@xem plar.co.uk

Great new monitors

TWO leading monitor makers have interesting news this month. : iiyama, which has developed a reputation for producing excellent budget-priced displays, has reduced the prices of its 17 and 21 inch monitor ranges. Unfortunately, for some reason our press release contained US\$ prices, but for example, the popular Vision Master 17 has been reduced from £549 + VAT to £529 + VAT.

At the other end of the cost and features scale, Taxan has launched a futuristic LCD flat panel LCD which is aimed at replac-

new top of the range Taxan Crystalvision 650 has an activematrix thin film transistor (TFT) display with a 14.5 inch visible diagonal and a pixel resolution of 1024x768. This compares with some conventional 17 inch monitors which can measure up to a mere 14.8 inches of true visible diagonal.

As the display is truly flat, there are no geometric aherrations to worry about and colours will be consistent too. The only concession to conventional technology that the Crystalvision 650 makes, is the number of displayable colours, which is 262 maximum

compared to most quality CRT monitors' ability to render 16 million plus. One advance Taxan claim over most of their flat panel rivals is that you don't need a separate interface card via which the monitor is connected.

The Crystalvision 650 has its own analogue to digital converter so it can be plugged into any industry standard VGA connector, including those on later Acorn computers. Multiple scanning means that 800x600 and 640x480 resolutions can also be ing conventional and bulky CRT (cathode-ray tube) monitors. The supported, plus there is VESA DPMS power-saving too. But the

biggest feature this monitor has is its cool looks - it really wouldn't look out of place on Jean-Luc Picard's ready-room table.

Back down to earth, while iiyama are shaving the pounds off the prices of its conventional 17 inch monitors and rapidly approaching the £500 mark, you could buy almost six liyamas for the price of one Crystalvision 650, which is priced £2999. Taxan say that dealers will almost certainly discount that price, however. iiyama Europe, tel: (01923) 219050, fax: (01923) 219048, Taxan (Europe) Ltd, tel: (01344) 484 646, fax: (01344) 50974.

Welsh Bible software

TAVISTOCK-based ExpLAN: Ltd Computers announced a Welsh language version of its Holy Bihle software, which is called Y Beibl Cymraeg Newydd (New Welsh Bible). The software is aimed at Welsh-speaking schools and

version of the Welsh Bible which can be electronically searched and cross-referenced. The first edition supplied also contains the Apocrypha.

The rich-format Welsh text

ministers who require a : and Foreign Bible society and has been internally renumbered to the Hebrew standard, so it can correctly auto-track with other Bible versions having alternative book and verse ordering. The is licensed from the British . New Welsh Bible Pack is :

priced £25 + VAT for a singleuser licence and requires a Base Pack if you don't have one already. For more information, contact ExpLAN on tel: (01822) 613868, fax: (01822) 610868 or e-mail explan@explan.demon.co.uk

The UK's premier Acorn peripherals manufacturer

ANNER

plus SCSI Interface

SCSI II INTERFACES from £66

(when bought with Scanner): A3000, A3010, A3020, A4000 £66 (£77.55) A310, A400, A540, A5000, RiscPC, A7000 £72 (£84.60)

Castle Technology's plug-&-play software allows up to 7 SCSI peripherals to be connected. Free software includes !Setup (SCSI), PhotoView, CDPlayer, and !Change FSI. *Backplane may be required

Buy one of our top quality Scanflat A4 flatbed scanners and start to realise the true power of your Acorn. Save time: scan in photos, drawings or logos etc; create your own full colour pictorial greetings cards, newsletters or reports; or use it to enhance your multimedia programmes.

- ♦ Special Offer SCSI interface from £66 (£77.55 inc VAT) makes installation easy
- Line art, grey or 24-bit colour modes
- Pre-scan colour/brightness control
- Free ImageMaster Software & TWAIN driver

Optima returns

than an updated Eidos Optima digital video editing suite, now based on a Risc PC instead of an A540 and sporting much improved video resolution and clarity.

The original Eidos Optima package sold in small numbers to enthusiastic film producers, including the BBC, for use as a non-linear video editing system. You did your edits on digitised footage and then programmed the finalised edit instructions into a vastly expensive linear editing system to finish the joh.

Spotted at the recent ECTS'96 leisure: system was that, although it had every: born Optima package will be the computing trade show was none other: fade, wipe and special effect you could: StrongARM processor, enabling a Risc PC want, its display quality was poor. Enlightened film editors didn't mind at all, hut they were in the minority and the product was shelved a couple of years ago. Then the Risc PC came along and Eidos used the extra processing power provided to Improve the digital sampling quality. It's now almost VHS quality, according to our spies and more than acceptable for semi-professional and professional use.

Apparently, Eidos are eyeing up a sizeable contract being offered by the BBC The problem with the old Optima; once again. The final ingredient to the re-

to do quality real-time digitising and compression at a price which could stim the competition.

Eidos, the company, has moved on remarkably since its inception about five years ago. The company now owns the majority of the UK games software producers, but company co-founder Stephen Streater still has time for the Optima project. Hopefully, some of the technology Eidos has developed recently will find its way into Risc PCs of non-

!LazyPrint updated

!LAZYPRINT, the utility published on the Acorn User cover disc in June, has been enhanced and has now reached version 2.10. Author David Crennell tells us that enhancements include changes to fonts, underlined text and StrongARM compatibility work has been completed. There are also a few bug fixes as well.

David says that users of Hewlett-Packard printers who are interested in obtaining the latest version can do so by becoming registered users. All you have to do is read the Instructions in the ReadMe file contained in the version of !LazyPrint contained in the June cover disc or contact 'Fortran Friends' on tel: (01235) 834357 for further Information. David can also be contacted via e-mail at: crennell@v2.rl.ac.uk

Simply Simtec

Continuing the tradition of making user-expandable memory modules, Simtec has just launched a new VRAM upgrade. This comes in two guises, a userexpandable 1Mb board and a 2Mb board. The 1Mb version has the unique feature of having empty sockets into which additional chips can be plugged within a few minutes to give 2Mb. This avoids the current inconvenience of sending a card away to have the extra chips soldered on.

Also as part of the development of the multi-processor, Simtec will be demonstrating the new multi-threading extension for RISC OS at Acorn World. As well as simplifying software design, it will enable new software to run on any machine from an A3000 to Multiple ARM Risc-PCs automatically taking advantage of any extra processors present. More details will he available at the show.

zip/jaz Drives

• zip & jaz Drives work just like hard drives except they are removeable, letting you instantly access tiles and applications.
• zip drives use 100Mb capacity discs & jaz drives use 540Mb/160 discs allowing any number of discs giving unlimited capacity.
• The drives are fast. Data transfer speeds around 1Mb/s for zip drives & >2.3Mb/s for jaz drives – ideal to backup your hard drive,
• Each drive comes with 1 year warranty and a starter disc.

Graphics

Acorn artists & designers only

TJ REPRODUCTIONS, arguably the hest Acorn repro hureau of them all, now offers a new service dedicated to Acorn graphics users. Using state-of-the-art, 64Mb, Postscript 2 dye-sublimation printers, the one week service costs £12.50 for the first 9.5x13in high gloss print and just £7.50 thereafter.

Officially this is open to Acorn users only, and is less than half the standard price for professional proofing. It is true that printers like the Epson Stylus and BJ600 are a cheaper alternative but not even the impressive Fargo Primera or colour laser copiers can match the size and quality of output from TJ's true photoreal equipment.

As would be expected of a high end repro house, the bitmaps and vector graphics can be colour matched to different printing press standards or to the screen display.

Bitmap files such as Sprite, Tiff and JPEG are supported as are Compo, Artworks, Draw and Vector graphics, even Impression documents; all acceptable on most types of removable storage media.

Specifically aimed at schools, young artists and designers, it seems the service will enable schools and non-professionals to attain professional quality final output at an affordable price.

TJ Reproductions Tel: 0171-372 4430

October Show There has been much in the

Hot tips for the

There has been much in the way of new graphics software in the last six months but hardware will be the pulse-raising element at this year's Acorn World.

Look out for Irlam Instruments'
MJPEG card, deals on the superb
Risc TV podule and the long
awaited Video Desk. Lots of
stands will be featuring
StrongARM technology, none less
than Acorn themselves. I look
forward, once again, to the
demos and wizardry of the
Bondar and Cox variety. I am sure
that graphics users will not be
disappointed by this very real
technology.

Professional grade 3D graphics has been threatening to burst out into the open for longer than many have been comfortably able to bear. What better a time then to reveal all.

Finally, not wishing to forget other users whose needs are more practical or simple, keep a keen eye open for some super deals on DTP applications, multimedia hardware and graphics stuff. With all the new releases there are bound to be some fantastic bargains around. CC, Clares, Spacetech, Pineapple, Alternative Publishing, Beebug and Oregan are the Graphics Page's hot tips.

Draw aid 3

Not having reviewed any of the previous versions of *Draw Aid* from Carvic, number 3 is simply too good to ignore. Owing to a lack of room on this month's page, we are not able to preview the application in full, but at first glance it works remarkably well as a very easy to use, multitasking BASIC programming tool for creating otherwise extremely time consuming vector graphics. More next month.

Carvic, tel: (01309) 672793

Contacting me

You can contact the graphics and DTP page by writing to me, Jack Kreindler at Acorn User, Media House, Adlington Park, Macclesfield SK10 4NP, or by email to augrafix@idg.co.uk.

Pics of the Month

SCIENCE fiction is the theme with Nigel Wood's winning picture this month. The piece, entitled Galactica, looks as if it has been rendered on a Sparc or similar but was in fact originated using a combination of Architech and Photodesk.

One of the other images, Abduction, was actually A2 sized originally and makes good use of *DaVinci's* powerful 'environment-mapping' rendering technique, *Artworks* and *Photodesk*. A number of other bitmaps were supplied as JPEGs on just a single floppy; the second month running that enough for a good portfolio has been supplied on a single disc.

Galactica and Abduction (below) by Nigel Wood from Lymington. Who needs Silicon Graphics?

COLTON software

Going Strong(ARM)!

Colton Software's Fireworkz Pro in action ...

Colton Software has always been here:- since the inception of the BBC Micro with the legendary View suite of productivity software - so good that it was shipped in ROM with every BBC Master. We always have, and will are continuing to produce software of the greatest quality and power.

Our suite of productivity software across PCs and Acorns continues to be unrivalled, and as we continually update and enhance our software for this ever-changing world, we remain at the forefront of the Acorn world.

As Acorn User said in July 1996's edition, "Fireworkz is something you should really check out".

Why not do so, right now?

3	
Please send me a de	emonstration disc of:

StrongARM power

AS more technical details of the new StrongARM hecome available I've heen particularly interested in details of the new processor's low level function. Judging purely from technical reports from the manufacturers, the new processor is set to he as much of a revolution in performance since Acorn first strapped a cache on to an ARM for the groundbreaking ARM3 – perhaps even more so.

As well as the radical increase in clock speed, important improvements to the caching and cycle time of the instruction executions will have a dramatic effect on processing power with major benefits for graphical code. The separate 16K instruction and data caches will certainly relieve some of the bottleneck imposed by the hus, although straight shifting of bitmaps to the screen is unlikely to receive much of a hoost.

Of equal importance is the acceleration of the execution of many instructions, most of which execute in less cycles than on previous ARM chips. While common instructions like branching, ADDs and MOVs execute in only two cycles compared to three cycles on older processors, the MUL instruction takes a maximum of only three cycles. The number of cycles to perform this instruction varies depending on the size of the numbers being multiplied, hut in its worse case, this could have taken up to 17 cycles on the ARM700.

These dramatic improvements will be particularly invaluable to the 3D graphics coder who performs many calculations for each pixel of the screen. In my early days as a demo coder on the old ARM2, real time ray tracing used to he an in joke describing the next effect we were working on, but the reality is really not that far away.

In addition to the great benefits of the StrongARM, there are drawbacks. Self modifying code is only possible with the use of a very expensive *SynchroniseCodeAreas* call, and this will lead to major problems with existing code that uses this method without the call. Problems are also encountered over previously recommended compaction tools. Self expanding archives, like those produced by BASS's *Crunch* utility do not work on the StrongARM. Watch out for Cranched versions of *Acoru User*'s QTM module which will cause problems.

As the overall design of the ARM processors becomes more complex, the very direct and obvions way of coding is taking a big change for the StrongARM. In some areas, performance may actually be reduced, as is the case when reading data from uncached areas like the screen. Conversely, many of the new methods of operating the cache and write back huffer can be used positively by code tailored to their method of working.

Many of these details are outlined in the technical specs available from Digital Semiconductors, but much experimentation will be needed before it is clear how hest to optimise code to exploit the power of StrongARM to its full. As the StrongARM comes into use in the PD scene I'd love to hear from anyone who gets to grips with these aspects of the processor. I'll certainly he covering the effect and potential that the new processor has for the PD scene over the coming months.

Programmers who have so far succeeded in protecting their bank balance from the ever increasing temptation of the new StrongARM, will receive a renewed assault from the details found in Digital's introductory technical specs and guidelines. These can be located on the Digital Databank BBS. Further information can be found in the StrongARM Technical Reference Manual, available from Digital Semiconductor's WWW site at http://www.digital.com/info/semiconductor/dsc-strongarm.html

Fishtank simulator

THIS rather unusual idea is the first mini demo from a group new to the Acorn scene. DFI have produced a little 3D world, populated by gourrard shaded fish. The surrounds of the fishtank are light sourced in a highly colourful manner, producing an interesting background to the fish themselves.

A shoal of tiny vector triangles swims around the foreground of the picture, and a much larger shark type fish circles the tank menacingly. This little loader certainly shows off the group's 3D talents, but I couldn't help noticing little niggles present in the polygon rendering routines, and an apparent hug in the fill routine that causes flickering horizontal lines across the screen on odd occasions. It's this attention to detail that the Acorn demo scene has often lacked in the past.

The team are promising further releases soon, including a 3D megademo entitled the *White Room*, which should hit the streets in October. *Fishtauk* is available from the Arcade BBS and from 5 Star on disc D79.

WebGif2

WEBGIF has been mentioned before in David Matthewman's HTML tutorial, but I thought this handy little program deserved a further mention here. Producing graphics for web pages is all ahout compromise – getting the hest graphical appearance out of the smallest

file size. WebGif2 helps you to do this by giving easy drag and drop conversion of sprite files to web standard Gif files that incorporate several extra features.

The most valuable of these is the Mask, which allows images to be given a transparent background. You can also

make an image interlaced so it can be displayed a bit at a time as it is downloaded for display on someone's weh page. WebGif2 is available on the net from anthor lan Jeffray's weh site, at: http://www.compulink.co.uk/~paradise1/ian.html

Public Domain

Games on the way

The recent flood of PD games looks set to continue as up and coming groups on the scene, Arm'd and Dangerous and Gilbert The Hamster Software continue to release new programs. GTHS are working on a new game - the "Advanced run for the bus simulator" and the latest news from Arm'd and Dangerous can be found on a new web site at: http://www.argonet.co.uk/users/r obert.t/

Optic

The Optic disc magazine can be obtained for just £1 per issue, or £2 for all three issues, direct from Jonathon Gutteridge at: 2 Newton Close, Eaton Rise, Norwich NR4 6RB. Apologies to Jonathon for omitting the prices in the September column.

Acorn World

Despite writing this at the height of summer, the time of the biggest Acorn show of the year is approaching fast. As always, it looks set to be the most exciting Acorn event on the calendar and its significance to the PD scene is no exception to this rule.

I'll be on the Acorn User stand all day on the Saturday, so please come along for a chat. As always, I'd love to hear your views on the PD scene and help out with any problems you might have. Feel free to bring along your PD for review in the column or submission to the cover disc and PD scheme. A special Digibank meet for PD enthusiasts and BBS users is taking place on the Saturday at 2.30pm at the Acorn User stand.

Contacting me

You can contact the PD page by writing to me, Paul Wheatley, at Acorn User, IDG Media, Media House, Adlington Park, Macclesfield, SK10 4NP. Or preferably, by e-mail to aupdpage@idg.co.uk.

Software requests

ACORN USER PC columnist, Mike Buckingham, is looking for a specialised application to record the cost of voice phone calls. The ideal app would provide a mini database of contacts linked to a mouse controlled stopwatch window.

When making a call, the user would select the contact from the database and time the call with the stopwatch. This information would then be used by the program to calculate the cost of the call and append the details to a spreadsheet or

In response to John Billings' request for an Apple Mac to Acorn sound convertor, Dis-le author, Mike Smith has a ConvSnd application that currently only converts the other way. Mike might he able to help however, and can he contacted by email at: mike@msmith.zynet.co.uk or hy snail mail at: 26, Grenville Road, Saint Judes, Plymouth, Devon, Pt.4 9PY.

ARMEdit

ALEXANDER THOUKYDIDES has just released a new version of his popular ARMEdit software. This suite of utilities provides a host of aids for the use of Acorn and Aleph One PC podules and co-processors. The new release adds many new features, including a DOS device driver that allows RtSC OS filesystems to be read from the PC just like normal DOS drives.

Support for Acorn's PC emulator has also heen added. Full documentation and library code has been included to allow other programmers to write their own software using the comprehensive communications facilities provided.

ARMEdit is freeware, and may be downloaded from http://www.tcp.co.uk/~thouky/tcfa.html

StrongARM disc

THE CD-ROM Acorn plans to release with the new StrongARM processor will include several new demo releases. A number of demo crews have been enticed by the chance to show off what the StrongARM can do, and judging from both eye witness reports of the StrongARM, and details of the technical specs (see StrongARM power) they are likely to be very impressive.

Contributors include co-author of Xtreme, John Tytgat, the master of everything innovative, Frederic Elisei of Arın's Tech, as well as productions from demo veteran Tor Houghton and a release from my own group, Quantum. According to my inside information, the highlight will he a mandelbrot routine from Frederic that can he scrolled and zoomed in realtime. I'll be casting my usual critical glance over these releases in a couple of issues time and hopefully we might even have them on display on the AU stand at

Flashback

FOLLOWING up Nathan Atkinson's request for a music patch for the popular commercial game, Flashback, Stephen Harrison has provided an excellent solution to the problem. The Acorn conversion of Flashback from the Amiga uses an inferior music player that not only plays the music out of time with the game, but also does it rather inaccurately. Fortunately we now have an easy to use patch created by Protracker music guru, and QTM author himself, Stephen.

All you need to do is double click on the !FBackQTM patch located on this month's cover disc, and then run your copy of Flashback.

While I'm on the subject of music, Stephen's Q The Music player has now reached version 1.27, which now offers a host of features ideal for the budding demo or game coder. The player module itself is included with the Flashback patch described above, but the complete programmers pack with full info of how to use QTM's new features can be found on the Digital Databank BBS.

The latest version of Chris Rutter's front end for the music player, can be found on the net at: http://www.doggysoft.co.uk/qtmplay/.

PHIL WEBSTER has started a regular sprite hased cartoon strip that will be available direct from the Digital Databank BBS. Phil's graphics are surprisingly effective given his use of Paint for all the drawing, and are well worth checking out.

rest,

Rumours on the BBS hint at a possible collaboration with a team of other users and a possible relaunch of the New Dawn disc magazine. Teenage Mutant Ninja Potatoes can be found in the graphics section of the Digibank BBS.

TREAT yourself to one of the worldfamous Sibelius music programs for Christmas - and get a Sony CD player, Aiwa personal stereo or CD-

1000 headphones for free! Simply buy your Sibelius program before Christmas from any dealer, then return the voucher below with your registration card, to claim your amazing free gift!

Choose between our new beginners' program Junior Sibelius! (£49+VAT. covers National Curriculum Key Stages

1+2), Sibelius 6 (£179+VAT, for GCSE), Sibelius 7 Student (£495+VAT, for A-level and semiprofessional work) or the state-ofthe-art professional Sibelius 7 program (£888+VAT).

The Sibelius programs need no introduction - suffice to say that they are the most highly-acclaimed music software on any computer, used by such famous names as the

BBC. Royal Academy of Music, Royal College of Music. Yehudi Menuhin School, National Theatre, Oxford University and thousands of others.

They've received rave reviews throughout the computer and music press - and in almost every national newspaper, including The Times, Sunday Times, Independent, Financial Times and Doily Telegraph.

To find out more about the Sibelius programs, contact your local dealer or Sibelius Software today, and ask for an information pack and free demonstration disk.

"This extraordinary computer program has changed the music world forever"

The Times

"In a totally different league from anything else"

Paul Patterson, Professor of Composition, Royal Academy of Music

"There are countless educational possibilities for this software"

Music Teocher magazine

"Instantly captured the imagination of staff and pupils alike"

Paul McMasters, Head of Computing, Winchester Callege

"Sibelius 7 feels as if it has musical instincts" The Independent

"The biggest surprise with Sibelius is how simple it is to learn and use effectively... the most comprehensive music package imaginable"

Times Educational Supplement

"Dramatically reduces the time it takes to compose a piece of music" Financial Times

"As easy to use as pen and ink" Jahn Rutter (composer)

"Sibelius 7 can notate, print and play a musical score at a pace even more rapid than Mozart at his most fecund... Imagine what wonders Bach could have worked with such technology"

The Times leader column, 31.1.96

Sibelius Software, 75 Burleigh St, Cambridge CB1 TDJ Tel: 01223 302765 • Fax. 01223 351947 email: info@sibelius.demon.co.uk http://www.acom.co.uk/developers/sibelius/

e Rest, O Christ

Please send me my FREE...

- AU 11/96 ☐ Sany Discman partable CD player (Sibelius 7 & 7 Student purchasers only)
- Aiwa Personal Stereo with super-bass, bass/treble control and 3-way auto-reverse (Sibelius 6 purchasers only)
- CD-1000 stereo headphones (Junior Sibelius! purchasers only)

To claim your free gift, buy your program from any Sibelius dealer and then return your registration form with this voucher stapled to it, in an envelope, to Sibelius Software to arrive no later than 31.197.

Only applies to programs bought between 1.11.96 and 25.12.96 inclusive—we reserve the right to require proof of purchase Limited to one free gift per purchaser. Upgrades, updates and extra stand-alone copies are incligible heences and bundles count as a single program for this purpose. This voucher will not be accepted if returned separately from registration farm. May not be used in conjunction with any other special offer or discount. We reserve the right to substitute an alternative gift of similar specification if necessary. Voucher nominal value 0.001p, E&OE

Comms

On the Up line at The Sidings BBS

IF you think there might be a connection between The Sidings BBS and railways you'd he right, but sysop Gary Parr is no mere trainspotter. He has always been fascinated by the railways and hopes to make a career in the rail business with that Boys' Own dream occupation of train driver. Gary successfully combines enthusiasm for science and technology with his railway interests in running The Sidings BBS.

Gary Parr and co-sysop

On the right lines at the Sidings BBS

Matthew Cook started The Sidings BBS in July, and the BBS has been growing steadily ever since.

Located in Nottingham, The Sidings BBS runs ArmBBS on an A305 with 1Gb of IDE discs, a 100Mh SCSI hard disc, CD-ROM drive and a SyQuest EZ 135 drive for backup. The Pace MicroLin FX Plus modem allows connections at np to 14k4 bps, and Gary hopes to add a 28k8 Sportster and another line later this year.

The Railway Related section

includes a local rail area map, rail news, timetables and information on preserved railways, and there are plans for a railway filebase. The Football area, edited by Neil Cartledge, contains up-to-date reports and information on mat-

ches, forthcoming fixtures and player statistics and there is a large selection of Liverpool pictures in the BBS filebase.

The Games and Doors sections offer callers other means of recreation; there's even a sneak preview area describing what's going to happen in various TV Soap series. Other special sections include the ARM Club with its own filebase, ARM'd and Dangerous Coding group files and a large collection of GIF and JPEG pictures in the Media Freeform filebase as well as up-to-date Acorn, FTP Mirror and PC files.

The Mail Room at Sidings BBS contains some local areas and a large number of networked RiscNet and X-Net message areas, and the user list already contains many names familiar to users of other Acorn BBSs. To add yours to the list, you can call The Sidings BBS at any time.

The Sidings BBS (0115) 9563481

Homepage automation

Many Acorn users have been busily setting up their own Demon Internet Homepage WWW sites. Roy Fellows has come up with a very useful script-generating program to enable !TCPIP users to upload and refresh such web sites automatically. Direct your browser to http://www.tilmun.demon.co.uk/c lub/roy/uplhome.spk making sure that you save the resulting file as HTML if the browser tries to display it.

Icarus Allsorts BBS

David Hart is causing a stir among invited callers with his new BBS system called Icarus Allsorts BBS. It's a hybrid system running ArmBBS on an 8Mb ARM3 A310, but with RiscBBS performing some background tasks on an A3010, linked to the other machine by a Virtual Hard Disc Server called SerNet by Andrew Timmins. Unique menus and novel animated graphics make this BBS one to watch out for when its final phone number and online times are settled.

The latest in a great line of offers from

CUMANA

CUMANA

Cumana, in partnership with Anglia Multimedia, bring you a unique opportunity to take the first steps into equipping for multimedia.

SPECIAL CD-ROM PACKAGI

* The Oscar CD-ROM Drive (including Acorn and PC driver software and a set of mini stereo headphones) plus

* A FREE CHOICE of 4 from 14 Angli Multimedia CD-ROM titles

For the Special Price of

£299

(including delivery and exc. VAT) Order Code: Anglia.Off (Offer ends 31st November 1996)

The New QUAD PEED Oscar Drive

Now equipped with quad speed performance and featuring a computer/CD audio mixer plus a 256Kb cache memory. With fast, reliable

performance Oscar can access a whole range of CD-ROM's, audio CD's, Kodak Photo CD's and fully support the most powerful multimedia applications.

Oscar is simple to connect and being external can be moved between computers and platforms. Being parallel connected Oscar has a 'through printer port' to connect other parallel devices giving complete flexibility.

PC column

Masterclips collection

EVEN the best art package cannot turn someone like me into an artist. The best solution is to resort to clipart. Browsing around PC World I came across a shelf loaded with it. I chose IMSI's *Masterclips* – a collection of 35,000 images including artworks, photos, fonts and borders.

It installs easily and runs smoothly on my system. Browsing is easy and selection of images very simple. An icon allows you to save a selected image to the clipboard from where it is available to any other Windows program that can access it – and most do. If you have PC Exchange running, your selected clip image is also available

to anything in RISC OS. Switching back to the RISC OS desktop will show PC Exchange holding a data file which can simply be dragged either onto a suitable directory and saved, or direct into a package like Impression.

The transfer works well but you can run into problems with colour images – pure colours are rendered as tartaus or become

blotchy. This happens if the display settings in *IPC* config are set to low res. If you reconfigure to high res, the colours are rendered properly.

The collection comes on two CD-ROMs with a substantial printed directory, in which the images are displayed as thumbnail black and white sketches.

The images are inevitably biased towards America – policemen wear US uniforms and the history section is heavily populated with US fignres although some of the major world politicians are also included. There are also maps and cultural images from around the

world.

Note on installation: In Win95 I had to go through the My computer'/'new programme route as the d:\install function via the 'run' option didn't work as described in the loading notes -Win 95 claims not to be able to find the install file. In fact this isn't that mmisual - so bear it in mind if something refuses to install as expected.

A browser lets you view the images by category

Learn to speak French?

OR perhaps Spanish, German or Italian. Over the last few days I've wished I could afford another computer - getting at my own has been difficult due to a language software package from The Learning Company. The Learn to Speak series isn't exam oriented, it is aimed squarely at amateurs - people who want to go to a country and get by. It concentrates on practical, everyday language and includes sections on business phrases and expressions too. It may be of use to language students taking GCSE but don't expect it to relate to the syllabus.

I haven't had much of a chance to play with them to he honest but my better half has given the French CD a good going over and my six year old has been curiously addicted to the Spanish course. They include sections of straight vocabulary, each section based upon a theme: you click on words and they are pronounced and translated. You can also

ture

hear them in context – a native speaker reads out a sentence which includes the chosen word or phrase, the text being displayed in both original and translation. Substantial use is made of 'movies' – you can see the person speaking the words. You could, of course, limit yourself to that but if you want to delve deeper and be more rigorous, there are also full grammar notes available at the click of a mouse.

Criticisms are few, but some exercises are rather over-pedantic. If, for example, you type in a phrase correctly but omit an accent, you'd expect to be told off. However you are also marked down if you forget a capital letter or even a comma. Until you know precisely what the exercise wants, that can be frustrating. Again, the software is oriented towards Americans. When you boot up the Spanish programme and expect to see a map of Spain, you actually see Mexico.

From the technical stand-

point there were no problems loading it (I've tried the French and Spanish versions) under Win95 and they should be equally suitable for 3.x. They run well. The sound is mostly very good, though it appears to be out of sync with the video much of the time.

The main problem is with compatibility: if you had a 'real' PC with a record capable soundcard, this programme allows you to record your answers and claims to he ahle to recognise whether you have spoken the right word or not. It will even comment on your accent. How good this is I don't know but a word of warning – I tried pressing the record button and everything locked solid. So don't.

Aleph One tell me there may be a way to get the record function working even though it's not supported by *IPC*. I'll let you know if I succeed as it could be useful, not only for individuals but for schools and possibly for other software too.

!PC news

In my last column I announced that the new !PC would be available and would be called !PC 96. It has been renamed !PC Pro which won't date, and is now shipping. I've installed the beta version manually, but the full release should be a doddle as it includes an installer.

As promised it's the first version of IPC to support Windows 95 properly, and so far I've no complaints on that score. It fixes several bugs, includes faster screen drivers and supports shared memory options that increase the speed of the software markedly. I've noticed a definite improvement in my machine. It's tricky to be absolute about speed improvements, but loading times for large disc based programs (eg Word) has dropped by about 15 per cent, with all other settings unchanged.

Incidentally an extra 8M (to 16M) allocated to the card makes a similar, additional improvement.

It may not seem a huge amount, but in practise everything is noticeably quicker – animations, for example, are much smoother, and games requiring sound and animation are far less fragmented than they were. So far I haven't altered my drive_c to Direct SCSI which should make it faster still.

Aleph One Tel: (01223) 811679

Aleph One rel. (01223) 0

Tip of the day

Microsoft's Word comes up with a tip for the day, usually it's something vaguely useful about how to improve your technique with Word. The other day it helpfully suggested I should be careful with scissors – they can be dangerous! Thanks Uncle Bill, I never knew that.

Contacting me

You can contact the PC page by writing to me, Mike Buckingham, at Acorn User, IDG Media, Media House, Adlington Park, Macdesfield, Cheshire, SK10 4NP, or e-mailing to aupcpage@idg.co.uk

It's a race against time to damp down the nuclear core that's going critical hy passing over it and spraying it with your craft's special extinguisher. Once the area has been cleared the teleporter must be found to exit to the next level.

Along the way you will encounter the plant's service robots, security robots and defence systems which will have to he overcome. Different units are known to hehave in different ways to intruders.

Power-ups such as lasers, a booster, better extinguishers, shields and coolant may be collected to enhance the craft. There are many bonus objects and you'll have to find out what they do yourself.

Controls

You can set the keyhoard or joystick controls from the main menu but once in the game you also have:

- FI Pause game
- F2 Display area map
- F3 Abort mission

Power-ups

Electron shield which gives your craft a short period of invincibility.

Area coolant jar cools the immediate area giving a little more of the precious time needed to complete the mission.

Paradise

Turbo thruster upgrade so you can move faster.

Plasma laser upgrade gives the craft even more powerful blasts that can travel through solid objects, only three can he carried at any one time.

Coloured keys activate and deactivate security beams of the appropriate colour, when

lit the key display shows that the corresponding security beams have been deactivated.

ACCOUNT USER COVER DISC Inferno Superba lovels of this fact is substantial device feath Parchal substantial and the substanti

Hints and tips

- All the core in an area must be extinguished hefore the teleporter becomes activated.
- Attempt to find the most effective route through each area to save time.
 - · Learn how to outwit droids and robots in the plant.
- Save the area coolant jars and extra energy cells until they are really needed.
- Avoid collecting multiple plasma laser upgrades as you can only store three of them.
 - · Use electron shields wisely.

Inferno is a budget game and you can get the full version for just £9.99 (cheques payable to *David Flynn*) from Paradise, 12 Kings Close, Longburton, nr Sherborne, Dorset.

Processor Vector Module

Stephen Harrison

The purpose of this small module is to add a new, very useful SWI to the operating system. This SWI is & 69,OS_ClaimProcessorVector, and allows programs to 'legally' take over the hardware vectors handled by the processor, such as the SWI vector and abort vectors.

This SWI is available in RISC OS versions 3.5 and later, but users of RISC OS 3.1 and RISC OS 2 cannot easily duplicate it's function and are left to fend for themselves – this usually results in incompatible code being created which will not work on newer

machines, and causes many problems.

The details of SWI

OS_ClaimProcessorVector can be found in Volume 5 of the RISC OS 3 PRMs, and are duplicated in the 'SWidetads' fde with this module on the cover disc.

Disc information

The software on these discs has been compressed using ArcFS 2 from VTi, and are opened by running a copy of ArcFS then double-clicking on the archive to open it. There is a copy of ArcFS on each disc.

Most software will run straight from the archive, but some programs may need to be copied out of the archive before being run, uncompressing them in the process. Any program that saves a file to disc, for instance, will be unable to do so into the archives on the disc.

Faulty disc?

If your disc is faulty, test whether it will verify by clicking with Menu on the floppy drive icon and choosing Verify. If it fails to verify or is physically damaged you should return it to TIB, TIB House, 11 Edward Street, Bradford, Yorkshire BD4 7BH. If it verifies successfully return it to the Acorn User editorial office at the usual address.

The Acorn User cover disc has been checked for viruses using Killer version 2.401 from Pineapple Software.

Cover disc

Flashback music

Stephen Harrison

This program was written in response to a plea in the software request section of the excellent *Acorn User* PD column in the July '96 *Acorn User* magazine.

Background

Anyone who has played the Acorn version of *Flashback*, and has seen the versions available on the Amiga and PC will have noticed there is a big difference in the music. The original Amiga version of *Flashback* has excellent music, sound, graphics and gameplay. The Acorn conversion has equal gameplay and better graphics (VGA support) but is sadly very lacking in the sound department – which just happens to be one of the most important parts of this game.

An example of the poor playing of the music in the Acorn version is the hackground music to the loading intros. If you have not seen the other versions you won't know that the US Gold title page is meant to appear in time to music, not seemingly randomly to a buzzing noise, as in the Acorn version.

The cause of the problem is the music player. The play routine used in the Acorn version of Flashback was probably writen by the game's author – which is always a bad sign, games authors should stick to games, and let music player authors bandle the music.

Solution

Luckily all is not lost. The music files stored in the Flushback game, although altered, still contain most of the original data from their original ProTracker format, and with a little effort can be converted back to their original glory.

This program, !FBackQTM, does just this, and converts all the music played in the game, while it is running, into their original ProTracker format – fixing badly converted effects and volumes as it goes, and sends the results to the best ProTracker music player available for your computer, OTM, Q The Music.

Jingles in the game, although much more altered in the Acorn version, are converted back to ProTracker format too, and are played by QTM using it's transparent sound system which allows Flashback's sound bandler to play all the sound effects through the

music as well.

The result is a much better game. Flushback's intro sequences are now perfectly timed to the music just as on the Amiga, and the whole game benefits from in-tune music, with much better timing and syncronisation.

How to use !FBackQTM

To play Flashback with the new, correct, high quality sound simply run this application, then run the Flashback game! Hard disc users can simplify this even more by copying !FBackQTM into the same directory as !Flashback, double-clicking !FBackQTM will then load the patch and run the game as well.

Note: This program only alters memory contents and does not modify any files in the *Flashback* game, so it won't alter your original discs.

Apologies to 1Mb users, deeply sorry guys, this won't run on 1Mb. Well it will run, but Flashback won't run with it, if you see what I mean. Maybe you should consider getting 2Mb? But if you've managed to survive so far with only 1Mb, you prohably don't need two.

This program will definitely run on RISC OS 3.0 and above, but has not been tested on RISC OS 2, as my RISC OS 2 test-computer only has IMh, but it should run. If it doesn't I will release an update to do so as soon as someone tells me about it.

David Thomas

IBrowse

IBrowse is a Sprite and JPEG image viewer for RISC OS computers equipped with the SpriteExtend module version 0.99 or later. This version of the module is built into RISC OS 3.6 and is available as a soft-loadable module for RISC OS 3.5 machines.

IBrowse was created to run in as little memory as possible, for this reason it doesn't provide some of the less-used features of image viewers such as scaling the view, 'slidesbowing' etc. However, it does support app-to-app transfer of images and performs excellently in its capacity as a fast way to view images.

Drag a Sprite or JPEG file to the *IBrowse* icon har icon. A window will open displaying the file. Also, double-clicking on a Sprite or JPEG file when *IBrowse* is loaded will load it.

In addition to the standard Info and Quit entries on the icon bar menu, there is also a 'Choices...' entry which, when selected will open the choices window which allows you to set the types of dithering used on the display:

Sprite Choices

• Simple dithering uses a simple patterning technique in most modes which helps lessen

the banding effect you get when you display deep sprites in paletted modes. My preference is to leave this option off, as it seems to make sprites look worse in certain cases. (Note that the patterning technique will not always appear immediately on the display. Sometimes a change of screen mode is needed to 'kick' it into action.)

 Load on donble-click will make IBrowse respond to double-clicks on sprite files, which it will automatically load. This option is off by default as most sprite files will have more than one sprite in them and IBrowse will only display the first.

JPEG Gathering

- No dithering performs no dithering so the image may look banded in 256 and less colour modes. However, it is the quickest display method.
- Simple dithering uses a simple patterning technique in most modes which helps lessen the banding effect.
- Error diffusion is the slowest display method hut provides a much better quality of display. This method only works for 256 colour modes, in other colour depths this is

equivalent to Simple. It is the default. It is worth noting that even with error diffusion, in paletted modes the display quality will never be as good as that produced by ChangeFSI. Use ChangeFSI if you're converting an image permanently to a sprite.

A menu is available from the display window which allows you to open the Choices window as outlined above, also it allows you to access an information window which provides details ahout the image such as the resolution and depth.

IBrowse will use a Dynamic Area for storage of the image and is compatible with Clare's *Virtualise* package. Information on obtaining the module can be found in the *IBrowse* help ble.

Acorn World '9

This year's Acorn World is really something to look forward to. There's been so many changes over the last year and there's now so much to look forward to that it's sure to be a busy and exciting few days. For a start, the location has changed. This year, Acorn World is to be held at Olympia 2 from

November 1-3. Over the next few pages you'll find details of how to get to the exhibition, as well as a preview of what's happening. There's a stand guide, floor plan and details of theatre presentations, seminars and demonstrations. Everything you need to plan your day at Acorn World 1996.

Getting there

London

Underground: Take the District or Piccadilly Line to Earls Court. A connecting District Line service operates from Earls Court to Olympia at 10-15 minutes intervals.

Bus: Olympia 2 is on several bus routes Zone 1. The numbers 9, 9A, 10, 27, 28 and 49 will get you there.

Rail: Adjoining

Olympia is Kensington Olympia rail station which provides an Inter-City link for fast through train services between

Manchester-Birmingham London-Gatwick-Brighton-Dover. The North London Line also provides a link from Clapham Junction Kensington Olympia Willesden. Main line stations are linked to Earls Court Olympia by the underground network.

Car: If you're driving to the show Olympia is close to the M3, M4, M25 and M40/1. Via the M25 there are connections to the M1, M2 and M11. There are several car parks at Olympia in which you can pre-book a parking space. These need to be booked at least 7 days in advance of the event using your Access or Barclaycard. Freephone 0500 845800.

The Acorn User's stand 92

Great Ormond Street Children's Hospital Fund

The Acorn User stand

Acarn User is in its thirteenth year and is still the best selling Acorn magazine in the world. 'They'll be a selection of back issues as well as the latest issue on sale. We'll also have Acorn User binders to keep your collection in – so why not treat youself? Make our stand your first stop, neet the team and if you're not already a subscriber it's your chance to sign up and take advantage of our special show subscription offer. See us on stand 92.

AU Lucky Dip - Stand 218

Feeling lucky - then make your way to the Acorn User lucky dip stand. Each turn is £1, then just dig deep into the tub - there's a whole host of prizes, big and small, to be won. All money is going to the Great Ormond Street Children's Hospital Fund, so come along and support this worthy

canse. Prizes have been kindly donated by exhibitors at Acorn World. And if that isn't tempting enough there's one StrongARM upgrade to be won each day.

Innovation, Education & Entertainment

Acorn World organisers EPS Events have received an overwhelming response from exhibitors wishing to launch new products at the exhibition. "There is more innovation in this year's show than at any previous event" said Stephen Bozdan of EPS.

Acorn RISC Technologies

At the centre of the new developments is ART, whose introduction of the superfast new StrongARM card has provided the computing power to drive many of the new applications. ART will be demonstrating the new processor in Risc PCs on the stand and will be presenting StrongARM upgrades as competition prizes every half hour throughout the show,

A complete SA-equipped Rise PC will be presented to the winner of a 'Lucky Key' competition rum in conjunction with Byte magazine, and show sponsor Acorn User will have StrongARM upgrades among the many lucky dip prizes. For those not lucky enough to win one, StrongARM will be on sale to the public for the very first time from the Centres of Technology exhibiting at the show.

The new NetStation computer is now a reality, and production models rather than technology prototypes will be available for trial on the ART stand (85), centrally located and shared with Xemplar on the ground floor of Olympia 2. A prototype of 'Newspad', described as a personalised electronic newspaper with A4 touch-screen technology, will also he on show. Members of the ART team will be on hand throughout the exhibition to answer enquiries and demonstrate the new products.

Theatre programme – Education

On Friday November 1 ~ 'Education Day' – the theatre will be dedicated to a series of seminars aimed at educational visitors, teachers and schools IT bnyers, and a balance between primary, secondary and special needs subjects has heen achieved.

Most speakers are either involved in mainstream education, or have heen 'front-line' IT teachers.

Theatre programme – Developers

On Saturday November 2 and Sinday November 3, the exhibition is 'handed back' to Acorn's enthusiastic band of home, professional and specialised users. A wide range of topics and demonstrations cover DTP and graphics; music making and publishing; statistics; the Internet and a new application which renders the Risc PC capable of running more software than any other commercially available desktop machine.

Saturday will see five of the leading 'players' in Acorn DTP – Mike Williams of Akalat Publishing; Tony Tolver of T-J Reproductions, Richard Lambley, Editor of Land Mobile magazine; Trevor Hutton, DTP Professional of First Impression; Majid Anwar of Alternative Publishing – presenting everything you need to know about using Acorn RISC OS computers in design, software, layout and imagesetting/printing.

Geoff Titannss of Softease will he demonstrating the very latest version of the acclaimed DTP software – Textease – called Multimedia Textease. Learn how to lay out pages and incorporate text, images, sound and Replay lilms

Sibelius is known throughout the world as the finest imisic publishing software available. Jo McCulloch of Sibelius will be demonstrating all the versions including the latest feature – Flexi-time which allows Sibelius to ase MIDI to input and notate what you play.

'More software for RISC OS than for

Cybercafe

Crèche

Windows' is the bold claim from ARMEDForces Software who will be launching WINRisc. Chris Claydon will be showing how PC software can be used in the RISC OS desktop environment, as long as you have a PC card or podule installed.

Chris Cox of ART will be presenting StrongARM - its history, the upgraded operating system, installation, in fact, everything you wanted to know about StrongARM but were alraid to ask.

Dave Clare, that stalwart of the Accorn community will be presenting - Plug-in Compliant Applications. This is not limited to Clares products and is heing supported by various Acorn developers. It allows conforming applets to be 'plugged' into any conforming application. Dave will also he demonstrating Wimp Basic - a programming environment that allows quick and easy creation of WIMP applications. Both segments will be of interest to the user and programmers among the Acorn flock.

Mark Perry of Oregan Developments will be demonstrating ProSound and CineWorks software packages as well as their own (and others) hardware packages. All are designed for the latest in Digital Audio and video editing.

One of the longest established software houses is Serious Statistical Software and Robin Edwards will be demonstrating the latest versions of

the only true statistical software available to users of RISC OS machines. SSSs market is predominantly schools, but there are also users in universities and colleges as well as many NHS hospitals.

Lyndon Couch of Beebug will be demonstrating some (if not all) of the amazing features of OvationPro some features will be unveiled for the first time at Acorn World.

Dalriada have developed many useful applications over the last few years and George Bachanao will be introducing Spider - a new WYSIWYG-ish HTMLEditor as well as the latest version of TableMate - TableMate Designer, which does for WWW Internet pages tables what the original did for paper based publishing.

Ever seen any of Walter Briggs 'painting' creations? Want to know how It was done? Here is your chance - Walter Briggs will be demonstrating how to use Studio24Pro from Pincapple Software. Come and see the 'Master' at work.

ESP and Dr Andy Pierson will be showing the latest in sound processing using a StrongARM-equipped Risc PG. They will also be presenting updates and extensions to Synthesiser. Interested in MIDI? Andy expects that ESP will have a school hased product ready to both demonstrate and sell.

Other features

Parents with young and school age children are not forgotten at AW96. Dr Maggie flolgate and her colleagues at the 'Parents' Information Network (PIN) will have a stand at the show, and they will be presenting a seminar on using computers at home with young children. While important now, with the increasing use of computers with ever younger children at school, this will become vital as the spread of the network computer puts tl' in every home in the land.

Whale watching

The "flC.TOC" project, supported by Acorn and BT Campus World will enable visitors to the exhibition to link up live to schools taking part in a remarkable worldwide adventure. The name is derived from the title: 'The International Challenge -Tropic of Cancer', and it is an 18 month expedition around the world involving children in the 18 conn-

tries visited in environmental and wildlife projects, and encouraging them to raise money by sponsorship in support of cancer charities.

The epic journey will have started in October, and the expedition's vessel the Creightous Naturally will be well into the first project, tracking the migratory movements of sperm whales, aided by Dominican school children using IT equipment supplied by Acom. Visitors to AW96 will he able to link up to the expedition and talk on the Internet to the expedition members and the schoolchildren as they follow the

Cybercafé

No Acorn World can take place without a Cybercafé, now a regular feature, and often the first 'handson' contact with the World Wide Web for many visitors, With so many new Internet applications being demonstrated and lannehed at the show, this year's Cybercafe will be an interesting experience for novices and old WWW hands alike.

Crèche

Popular demand has ensured that the creche facilities will be offered for families with children too young to take an interest in the exhibits, or just too fired to 'keep on truckin', and Olympia's extensive restaurant facilities and rest areas should ensure a more relaxed event for all.

As this article went to press, more developers were contacting the organisers with news of innovations for the show. Watch the AW96 website on http://www.epsevents.com/ acorn-world for the very latest information.

... the Quality Upgrade

VRAM solutions for the Risc-PC....

Using our expertise in expandable module design and our development of the smallest SOJ sockets available, we have been able to manufacture the first user-expandable 1Mb Risc-PC VRAM module. Unlike existing VRAM designs, our 1Mb card has empty sockets on the reverse side and can be easily user-expanded to 2Mb in a few minutes by plugging in the extra chips. There is no need to suffer the risk and inconvenience of sending this card away to be upgraded. All our cards and upgrades are guaranteed to be 100% new product.

2Mb VRAM - £115 1Mb user-expandable VRAM - £80 1-2Mb plug-in chip upgrade - £59

To mark the introduction of our new card, we are offering 2Mb cards for only £95 when you trade-in your existing 1Mb Acorn VRAM card

Whatever your machine, if you need more memory choose Simtec, the quality upgrade. A full range always in stock.

Every upgrade is fully tested before despatch and carries our usual two-year warranty.

Prices include UK carriage and VAT @ 171/2%

They will also be an opportunity for non-CD customers to purchase special low price fonts on floppy discs.

Productive Finance software

Personal Accounts v3

Running your personal finances on a computer might seem like overkill, but until you try you will never know the benefits.

Keeping track of direct debits and standing orders is at best fiddly and at worst expensive when you consider the charges most banks levy if you become overdrawn.

Personal Accounts takes the

guesswork out of it. You will know exactly how much you have in each account and when it needs topping up. This, however, is only one of Personal Accounts' many features.

"Far faster and easier than any other package... an absolute dream to use..." -- Acorn User.

"You'll wonder how you ever coped." - Archimedes World.

Prophet (Business Accounts) v2

If a computer program could replace a manual business system and not only give you more information but also save you time, it would be a worthwhile investment.

If it could automatically enter standing orders on time, send overdue statements to your customers, produce VAT returns (approved by UK Customs a Excise), calculate Prof Loss and balance sheets and cost less than £200, it would be an absolut bargain.

Prophet not

It is here ore no wonder it was yarded Best Business Software by Acorn User in 1995.

Dealing in stocks and shares can be a time-consuming activity, but you can speed things up.

Shares 5 produces summaries including capit tax and growth function

omprehensive graphing facilities include moving averages, historical low and interest rate comparisons.

"Apricote has a talent for providing well-presented and simple software that has considerable technical sophistication lurking behind the user interface" - Acorn User.

Acorn User Subscription Offer*

To celebrate the return of the Acorn World Show, Acorn User has teamed up with show organisers and 12 leading Acorn specialists to offer all new subscribers one hell of a deal.

All offers
are exclusive to all new
Acorn User subscribers or
renewals, and are in
addition to any offers
already advertised by
these companies at
the show.

Subscribe... Save money, get a free ticket to Acorn World, fabulous money saving vouchers and 13 issues of the World's leading Acorn mag delivered free to your door! All for only £39.99

As well as receiving a free adult ticket to the show, worth £5, subscribers will get 12 vouchers saving you big money off some of the best software and hardware peripherals around. In fact you can save in excess of £170 off a host of products from:

Sibelius Soitware - Anglia Multimedia

VII Eclipse - JetPrint

AVP - Warm Silence Software

Desktop Projects - Doggysoft

Colton Soitware - Oregan Developments

CUE Micros - Softease Little

And after you've taken in the show, Acorn User will keep you up to date on all the latest developments in the world of Acorn computing over the next 13 issues. After all, we've been the main source of information for all Acorn enthusiasts for the past 13 years.

* UK only

StrongARM nere

s you read this the first batch of A StrongARM cards for the Risc PC will be winging their way across the country to Acorn Clan members, 1 spoke to Chris Cox and Dave Walker just two weeks hefore they expected the first ones to ship.

As the StrongARM processor prototypes are evaluated they continue to delight and surprise hoth Acorn and third party developers alike. When you use an application regularly you get to know how it reacts and expect delays when doing certain actions. It's when those expectations are not realised you get a surprise and a buzz.

For example one person at Acorn uses ProCAD for all the huilding work, floor plans and so on, it normally took about 20 seconds to download from the network and rendered on screen. So one day the development team slipped a StrongARM card in his machine without him knowMike Cook reveals the facts behind the power of the StrongARM chip

ing. The following morning, when he came to use it, the whole job was completed in less than a second, he was speechless. When he recovered he spent a good part of the day showing others how fast it was - a case of a faster processor not increasing productivity.

I suppose you could have predicted some sort of speed increase for that hut no one expected formatting a floppy disc to be affected, in fact it's 15 to 20 per cent faster. Network access and luternet operations also show a speed increase.

So the big questions are, what makes the StrongARM so last and just how fast is it? As you might expect there are many interdependent factors in play here, so many, in fact, that the full impact could not be evaluated before the prototypes arrived.

Perhaps the easiest to understand, initially at least, is the clock speed, at a nominal 200 MHz it is about three times faster than the fastest previous ARM chip. The exact clock speed is generated inside the chip and is expected to be 202.4 MHz.

Now that does not always produce a three times increase in overall speed because the computers main memory can't be accessed that fast, the chip has to slow down to do that. One way round this is to have a small section of memory on the processor chip itself.

Any instructions fetched from the main memory are stored there so that if they are

> needed again the processor doesn't have to slow down to get them. This is known as Level 1 cache as it is actually inside the processor chip.

> A Level 2 cache is fast memory that is added to the processor card, - it is not main memory but a buffer hetween the main memory and the processor. It would he too costly to have faster chips for all the machine's memory but a few K can improve things.

The current StrongARM card does not have a Level 2 cache and it's looking like speed improvements from it would only be marginal. However, Acorn are committed to producing at least an evaluation prototype of this type of card.

Now those of you that know the old ARM3 and ARM6 chips will know

The size of a 586 Pentium-type processor to the StrongARM — brute force versus elegance

You can buy the next issue of Parents & Computers for only £1

A guide to education for 3-11 year

Parents & Computers is essential reading for anyone with children concerned about how computers are used in school, standards of

education and how you, the parent, can make a real difference.

All you have to do is send off the coupon to the address below and we will send you

the next issue of this outstanding magazine for just £1.

The original StrongARM board

that they have Level 1 caches, so why does this bring about a speed improvement in the StrongARM? There are basically two reasons. First of all it's much higger at 16K

and secondly the processor architecture has been changed completely to a Harvard architecture. This means that there are two tevel t caches inside the processor, one for the data and the other for instructions, each t6K. This arrangement is much more efficient at running programs, requiring much less access to the comparatively slow main memory and making the most of the fast clock speed.

Another speed boost comes from a new unified 5 stage pipeline structure, (see panel for details). This makes the act of executing a series of instructions much more efficient hy, in effect, doing some

operations in parallel. The ALU or Arithmetic Logic Unit has also been redesigned, and as a result some operations

It's the multiply instruction that henefits most taking just 1 to 3

cycles compared to 3 to 16 cycles before—these cycles are three times faster due to the clock speed. Perhaps the most exciting consequence to the ordinary programmer is that BASIC programs show the greatest speed up of all, from 10 to a staggering 20

The most exciting consequence is that BASIC is only programs show the greatest speed increase of all

times faster. This from a processor that on paper is only about five times as fast. Are you listening, Bill? At least 1000% faster!

The reason for this is quite interesting and owes it's origin to the

early BBC Micro. The BAStC interpreter in the early machine had to fit into the memory of an 8-hit processor and so was very compact, about 16K. As this was adapted for the ARM chips, the increased width of the data bus meant it was *simpler* to write an interpreter.

So extra features were added and the size of the interpreter stayed at about the same size. Now it just so happens that the whole of the Basic interpreter fits into the cache of the StrongARM chip making the world's fastest BASIC interpreter, even faster! The greatest speed increases show up in program that perform large amounts of calculations, like satellite tracking or coordinate transforms used in 3t) graphics.

Compiled C programs do not show as much improvement, typically 5 to 10 times. There has been some concern about the C compiler not working but release 5 does work, in fact they used it to create the new operating system.

Programs written in hand-tuned assembler can also show a huge speed increase. The record goes to a piece of code that didn't do anything useful but was specially written to highlight the new processor. That one clocked in with a 35 times speed increase, which is a

Pipeline structure

When a processor executes an instruction it goes through a number of stages. First it has to be fetched from memory, then decoded, that is, the correct arithmetic and logic elements must be activated. Depending on what the instruction does, various internal registers have to be loaded with numbers. Finally the results of the operation have to be placed somewhere.

Originally, in microprocessors, one instruction went through each stage before the next instruction cycle was started. Pipelining is the technique whereby when an instruction finishes one stage, that stage starts working on the next instruction so the overall throughput of instructions is faster. However, it does not always work so smoothly, for exam-

ple, take the case of a branch. When the processor decides that a branch in the code should be taken, the instructions already in the pipeline are useless and need to be thrown away.

Therefore for a program to execute best in a pipeline branches should be avoided, but for a program to work best with a small cache you should have lots of tight loops, there's always a tradeoff. However, in general the more stages you have in your pipeline, the more efficiently you can execute your instructions.

The ARM processor has conditional operation on all of its instructions, this tends to reduce the need for short branches in code. Hence this sort of code benefits more from pipelineing.

good example of how to manipulate benchmarks.

One universally recognised benchmark is the Dhrystone, it is normally used to compare the raw processing power of different processors. In a recent test a 200MHz Pentium weighed in at an impressive 295K Dhrystones hut as you might have guessed the StrongARM outperforms this with 355K Dhrystones.

The StrongARM was always going to have it's downside in terms of compatibility with existing software, but even that is looking a lot better than might have been feared. You see, while the processors instruction set is the same as the older chips there are subtle differences imposed by the change in architecture.

The first big restriction is that you can't write self-modifying code due to the data space and instruction space being separate in the Harvard architecture. An example of self-modifying code might be found in a graphics routine to draw a straight line. When you decided what way the line was going one trick was to store a bit pattern in the appropriate part of the program that would change an instruction from an increment to a decrement. In that way the

program would either be much shorter or much quicker as you don't need to constantly test which way the line is going each time round the loop.

The StrongARM was always going to have it's downside in terms of compatibility with existing software, but even that is looking a lot better than might have been feared. You see, while the processors instruction set is the same as the older chips there are subtle differences imposed by the change in architecture.

Another favourite use for self-modifying code is in program protection where most of the instructions are stored on the disc in an encoded form and the program goes

Pipeline problems

The 5 stage pipeline can also potentially cause a problem. When you store the program counter in memory you actually get the value plus 12 on the old processors, but on the StrongARM you get the value plus 8. Fortunately, when the destination is another register you get the same as the original processor.

One instruction that does cause problems is when you have the PC as the destination and one argument is a shift or rotate specified in a register. This requires the shift to be done in the preceeding instruction. Multiple register load and store instructions are also treated differently, they are simply unrolled by the processor into a sequence of single load and store operations, thus taking slightly longer than the old processor.

through the instruction putting them right before they are run. These tricks simply don't work with Harvard architecture.

However, a trick that will work, and is used in many applications, is a jump look-up table. That's where the program stores a byte in memory and later takes that as a jump address, it's a sort of computed GOTO routine. Most developers were initially worried that their programs would need a substantial rewrite but in most cases this proved not to be the case.

There is a growing, definitive list of the software that has heen tested on the StrongARM compatability page at http://www.art.acorn.co.uk/HOTSTUFF/sac ompat.html However, Acorn found that the kernel, the heart of the operating system, needed rewriting and so they used the opportunity to add in some extras to give its RISC OS 3.7, see the panel for details. Note that this operating system will still work with the older ARM processors and will be available as a general upgrade later.

Another downside to the StrongARM chip is that the whole board only consumes 1 watt of power, so unlike Pentium users you will have to find other ways of making your toast and coffee.

Where to next? Acorn plan to make a big show at this year's Acorn World, they simply want people to use it because it will sell itself. As a follow-up to the show Acorn have a road show that they will take round to major cities in this country, there are even plans to exhibit it at a large German computer show.

In the computer industry there are always exciting new capabilities round the corner but it is a very exciting time as you near the next corner. Acorn's machines are, once again, about to take their rightful place at the front with the fastest processor in town.

Installation

Installation of the StrongARM card is not quite as straightforward as just plugging in the card because the operating system ROMs need to be changed as well. This might prevent the more squeamish or ham-fisted from proceeding. Acorn are supplying an anti-static wrist strap just to be on the safe side.

The recommended procedure is to deinstall any copy-protected applications back onto their original discs and make a copy of your boot files. Then the operating system ROMs should be changed and the new operating system installed. Only then with the new system running should the processor card be changed for the StrongARM.

Then reinstall your applications one at a time so you can spot any that cause trouble. Full and detailed instructions are supplied. Incidentally in addition to the floppy discs the new system is also supplied on CD-ROM. This contains lots of extras, like showoff demos, replay movies and the original Risc PC set of slide show images. For those of you who have been hanging onto them this will allow you to free up a bit more disc space.

Pssst...

Want a hot tip for Acorn World?
Acorn Centre of Technology, Alsystems, has
done a deal with ART and secured a large quantity of
those fast new StrongARM things. Buy one from
them at Acorn World for £249 exc VAT and one of
their engineers will fit it for you FREE while you visit
the rest of the show! Call Alsystems now on
01420 561111 to reserve your StrongARM
and don't forget to take your RiscPC to
Stand 68 on the dayl

HOW GOOD IS YOUR GRAPH **DRAWING PACKAGE?**

Does it support OLE for the latest DTP packages? Is it simple to mix different graph types? Has it got extensive presentation controls? Can you put text anywhere you want? Are key areas fully under your control?

We could go on for much, much longer, nag about shadow effects, backdrops, automatic table generation etc... Why not contact us for full details of...

Presentation graphics without tears.

GraphMate costs £45 for a Single User pack, p&p included.

ableMate

The Ultimate Table Editor!

- Coming for Acorn World '96!
- Variable fonts inside cells
- Super- & sub- scripts, bold and italic effects
- Export/import HTML tables for the Internet
- Yet more line and row controls!

Computer Systems

- Global cut-and-paste
- Buy TableMate 3 now upgrade later and save money!

- · Flowcharts, organisational charts, annotated diagrams spider diagrams, process diagrams - and more!
- Automatic connection of symbols using Artificial Intelligence
- Full colour control, word wrapping and graphic scaling The fastest, easiest and most powerful way to create all those

time-consuming structured diagrams - now improved!

Single User - £50. TableMate 3 User - £45.

"Possibly an essential purchase" "I would recommend this package to anyone"

- TableMate 2 & 3 Reviews, Archive May 95/Feb. 96

- Vertical joining of cells, vertical tabs
- Extended import & export ... and much more! TableMate is simply the most comprehensive tablemaking package available - nothing else comes close.

Single User £34-50; Upgrade from Style/Publisher £19-50

IDI – to most people this means a particular style of integrated record deck, cassette, FM tuner and CD player. Say this to any contemporary keyboard player or other musician involved in the new music technology and they will think you mean something quite different.

How it all started

The end of World War 2 saw musicians experimenting, making music with electronic oscillators and also recorded sounds. By the 1970's a large number of synthesisers had heen developed, most of which were monophonic. It therefore hecame common to link several synthmodules together under the control of one keyboard, using a standard known as CV or Control Voltage.

Unfortunately, different manufacturers were using different variations of the standard and it became necessary for the whole industry to agree to a standard. Finally the Musical Instrument Digital Interface 1.0 communications protocol was unveiled to the industry at the Los Angeles Music Fair in 1983. Since then every professional standard keyboard, sequencer or sampler has sockets on the hack marked "MIDI".

MIDI and RISC OS

"What's this got to do with RISC OS machines?" I can hear you say. Simple, by fitting your machine with a MIDI interface you can control the vast array of MIDI compatible gear ranging from keyhoard gear through samplers and sequencers to lighting rigs and mixing desks.

Why use MIDI?

"But there's already an internal sound system", you reply. Yes, and it is a pretty good one, but it can't compete with the dedicated processors inside modern MIDI equipment. The arrival of the RiscPC and applications such as the PD TiMIDIty, the shareware ReMIDI, and ESP's software Synth enable users prepared to upgrade their systems sufficiently, to effectively use their machines as General

Midi

maestro

Michael Cowgill presents a brief guide to MIDI

> Midi sound modules. Although the quality of sound is very much dependent on the sample set available, and the amount of RAM for storing the samples being used. It is a cheap way into MIDI compatibility for those unable to afford dedicated MIDI

Why not Tracker

Programs such as Tracker and Digital Symphony are too restricted in terms of the availsound channels. Compared with the 28 note polyphony of the Yamaha MU5 General MIDI module, or the 32 note polyphony of most other modern MIDI keyboards (128 and 64 note polyphony is available but not yet common), the 8 channels of Digital Symphony place severe restrictions on any chords you might want to play, and even with the 16 channels of Desktop Tracker you are struggling if you want to include strings and hrass into your music as well as hass, guitar(s) and drums.

Setting the standard

Perhaps the most important reason of all for choosing to work with MIDI is that it is the Music Industry's standard format. A lot of nonsense is talked about industry standards, but it is of real use to know that a composition you have created in Rhapsody can be saved in MIDI format then loaded into Sibelius, or Cubase or Notator, or Cakewalk Pro and then played back. It isn't that the Rhapsody format is no good - each one of the music applications I have mentioned has its own format, but each one will also read and write in MIDI format hecause that is the one that all machines in the music industry can understand.

Jargon Box

MIDI Musical Instrument Digital Interface monophonic Only able to play one note at once polyphony More than one note can be played at once

Set of parameters which produce a particular sound patch

The latest MIDI standard which defines the instruments assigned to patch General MIDI

Integrated Circuit - the blocks of silicon you see when you take the lid off IC

your computer

Photodesk is the package which defines studio quality image editing and artwork on RISC OS machines. It is easy to use but has many powerful features, including a sophisticated colour management system (CMS) for the professional user.

Artworks renderer now available, also please contact us about the latest plug-ins and loader/savers!

At exactly half the price, the new 'Light' version of Photodesk is offered as a way of accessing all the creative features of the application with the exception of a handful

of facilities provided to satisfy the needs of the full-time graphics professional: this means you can henefit from the l'ull range of tools and effects, including plug-ins for less than the cost of the original Photodesk (v1),

*all prices include 17.5% VAT and UK P&P

£99.00*

At last a 3D modelling and graphies creation package that allows you to edit a single view! Even the most complex models can be created and manipulated

with unrivalled ease and speed. Optimised hand-written ARM code routines boost performance in all areas and ensure maximum benefit from StrongARM! Many exciting new developments are in the pipeline, this is only the first in a series promised by Sincronia of Italy!

The amazing FotoFUN! is the first truly affordable printer to use dyesublimation technology. This means that it is possible to get TRUE photographic quality output from your RISC PC. Real glossy photo prints that you would be proud to paste in your album are possible, RINTER and you are entirely in control; with

the help of suitable image editing software like Photodesk your photos can he any way you want them!

**Includes 17.5% VAT, UK P&P driver and consumables

E0	Pitch Wheel	Pitch (LSB)	Pitch (MSB)
F0	System Exclusive	**	**

** Note: System Exclusive (data dump) 2nd byte= Vendor ID followed by more bytes and ending with EOX.

Under the skin

So how does it work then? A MIDI file is quite unlike a Tracker or Digital Symphony file. They contain digital images of the sounds together with the data for the order they should he played in. MIDI files consist of a series of instructions which are sent to the MIDI devices. Each instruction consists of a Status Byte followed by one or more Data Bytes. The Status Byte tells the device what action to take, and the Data Byte provides the parameters for that action. Table 1 gives information on the most commonly used Status Bytes. All numbers are in hexadecimal.

Implementation charts

The specific action taken hy any one MIDI device is shown on the MIDI Implementation Chart which Is supplied with all devices conforming to the MIDI standard. An example is shown in Table 2, without data, although some controller numbers are shown. The instrument's responses to the various MIDI messages are shown in the blank columns next to each one, first of all whether it transmits this MIDI message, and also whether it receives and understands this message.

The final column is for remarks giving further information about its response to the message. For example in the remarks column for the Control Change message you may find a list of the names of the controllers that the numbers in the first

RISCOS MIDI SWIs

Although there are others, everything you need for patch selection etc can be done with 2 SWIs:

- MIDI_TxByte
- MIDI_RxByte

Use MIDI_TxByte to transmit MIDI commands to your keyboard putting each byte in RO.

Use MIDI_RxByte to read MIDI info from your keyboard, Each byte will be held in RO column refer to. Usually references to Default refer to the state of the machine when switched on. Changed or Altered refer to its state after a command has been issued to change this status.

Exclusive!

You may have noticed in the table of Status Bytes that there is a command for transferring System Exclusive information. System Exclusive messages are one of the most powerful aspects of MIDI. It is System Exclusive messages which enable sequencers to have initial parameters set up from a MIDI file, or initialise the parameters required from a General MIDI

They are vitally important as they enable system specific events to he sent via a universal system. They can also be used for synthesiser patch creation and control from a computer.

All the information you will need to know should be found in the manual for your keyboard in the section on MIDI. Some keyboards do not allow you to change the sounds, but even then, you can use the computer to make patch selection available at the press of a hutton.

Back to BASIC

A few lines of BASIC is all you need to implement most of the commands although there is nothing to stop you programming in C or ARM assembler if that is your favourite language. One word of warning. If you are writing patch editing software for older keyhoards, it is possible to cause them to crash in such a way that only the manufacturer or a trained repair engineer can reset them. In some cases you can even blow ICs, so it is vital that you test the output from your program, before you start using it with your precious Juno or DX7.

You must also make sure that your program shuts down with an error if someone tries to use it with a keyboard it is not

designed for. This is quite easy as the normal MIDI protocol is for the System Exclusive byte &FO followed by a byte which represents the manufacturer's ID. Most manufacturers then follow this with one or more hytes which identify the model of keyboard. You can check for these and tell the program to abort if any of these bytes are not correct. I hope that the BASIC examples which follow will give you enough to help you start writing your own MIDI control programs. MIDI control is only limited by your imagination, you can even use it for networks.

Geoff Preston looks at a new software package which takes traditional nursery rhymes, links them together and turns them into a soap opera

revisited

Question: What is the name of the sister of the candlestick maker in the nursery rhyme Rub-a-dub-dub? According to software house RESOURCE, the candlestick maker's name is Tom Wax, and his sister is Ruby (who is also the lady who rides

her horse to Banbury Cross)! RESOURCE are just about to launch a CD-ROM which not only tells the story of all the nursery rhyme characters so familiar to most of us, but also fills in some of the previously unknown background details. Not

the official background, but a plausihle (in most cases) background never the less.

To research this article, I chose to

To research this article, I chose to visit RESOURCE rather than to simply receive a trial copy of the software to use at home. What immediately struck me when I arrived at RESOURCE's premises in Kegworth, Leicestershire was the enthusiasm from the team. The writers, artists and programmers have spent untold hours on this project over the last two years, and yet they were still full of excitement when describing it. When my three children sat at the computer to have a go, they were watched very closely to see if there was any way of improving the software to make it easier to use. Such is their commitment to produce the very hest possible program,

The initial idea

Conscious of the need to put something back into the community,

RESOURCE MD Brian Stevenson approached a nearby children's hospice and suggested producing a CD-ROM

with the view that some of the profcould be channelled into the hospice to provide some sort of regular income

Inside the Classroom. Clicking on the map, the teacher, the desk or the cards will take the user to a story or activity.

for them. As the name of the hospice is The Rainbow, the town at the centre of the stories is called Rainhow's Edge. There will eventually be four CD-ROMs in the series, the first, Much Ado at Rainbow's Edge, will be followed by Stories from Rainbow's Edge by Christmas, with two further titles next year.

Aimed at Key Stage 1-2, Much Ado at Rainbow's Edge is primarily designed to help develop reading, but it goes a lot further. It's difficult to know quite where to start reviewing this software because there is just so much of it, with no obvious heginning or end. The final release will just about fill a CD-ROM, and that is only after a considerable amount of pruning.

At one point programmer Paul Jackson calmly announced that the 650Mbyte CD-ROM wasn't really big enough, and they are eagerly awaiting the next generation mass storage device. The reason for the need for huge quantities of disc space is that apart from the extraordinarily high quality graphics including animations, there are over 55,000 words of digitally recorded text. The recordings are by professional actors and actresses who really bring the characters to life.

The software opens with a scene inside a classroom beautifully drawn in the style that seems almost synonymous with nursery rhymes. The art work by Tod is superb. Each image, a work of art in its own right,

has been carefully hand drawn, thenscanned, re-touched, and anti-aliased to help remove the effects of the square pixels on the curves.

Most of the objects within the classroom can be selected to take the user to the various activities. Clicking on the map on the wall zooms in to show the town of Rainhow's Edge, dominated by the Castle, which houses Old King Cole together with his fiddlers three, as well as all the King's horses and all the King's men. In the village you'll find the High Street with the butchers, the bakers and the candlestick makers. Out in the countryside is the crooked man's crooked house as well as the three little pig's house under construction. The grand old Duke of York is busy marching his 10,000 men up and

down the hill while in the woods Cock Robin's story unfolds.

All of the 120 characters and their families live in and around the village and moving the mouse pointer over the buildings shows who lives where. Clicking on a house will take the user to the story about the characters who lives there. The clever part here is that not only are the stories of the main characters included, but many stories have been created which links other members of the family to other nursery rhyme characters which have their own family. Tim Piper (the father of Tom as in Tom, Tom the Piper's son) is a kindly man who helps Mary rescue her lamb.

The nursery theme continues with countless interesting extensions to it just isn't fair, thought the Great Owl as he perched on a sign. No Owls ... it's discrimination, that's what it is ... whatever that means." They just didn't care two hoots about Owls and Pussy Cats. Well just have to swim to an island," he said. 'Get married by a turkey'.

some of the stories. One amusing tale is about how Humpty Dumpy actually came to fall off the wall and precisely why all the King's horses and all the King's men couldn't put Humpy together again.

A novel twist on the talking story idea is that unlike most other talking books, these stories are not necessarily linear. In other words, you don't have to start at the beginning and work through to the end. When

another character appears in one of the scenes, the user can move the mouse pointer onto that character, select it and continue reading the story about that character. Later, while reading that story, another character may appear and that one can he selected so that that story may be followed.

All of the stories and characters are inter-linked in this way which greatly adds to the interest. Back in

> the classroom, clicking on the letters under the

The stories are not just re-hashed rhymes but are new stories on the original theme. Some of the writing is very clever and very funny.

map offers the user one of eight activities. These range from questions about some of the events in the stories to Personal

Social Education activities.

To answer the questions one must lirst read the story and unless the story has been read, the relevant questions cannot be chosen. Teachers will he especially keen on the PSE activities, I'm sure. When chosen, a list of PSE topics is given, and clicking on a topic displays a list of stories which feature that topic. For example, if Bullying is chosen, the list of stories includes Georgie Porgie who, for those of us who recall, kissed the girls and made them cry.

Once again, back in the classroom, clicking on the teacher will display a pictorial database of all the characters in Rainbow's Edge. Clicking on a character will take the user to the appropriate story.

Whichever simple phrase is dreamt up to describe Much Ado at Rainbow's Edge, 'talking book' does not paint the full picture, although a large part of it can be used in this way. Apart from developing reading, associated activities include map work, databases, PSE topics and comprehension.

Also included on the disc will be several worksheets as Drawfiles which can be printed out, as and when they're required.

Talking books

Unlike Much Ado at Rainbow's Edge, the second CD-ROM in the series, Stories from Rainbow's Edge, is a collection of talking hooks based on the original rhymes featured in the first CD-ROM. The texts for the stories. however, are not the original rhymes regargitated for this program, but have been re-written and slightly expanded upon, although still following the original storyline quite

The program opens with a scene in the library. The user moves to one of the thirty or so hooks on the bookshelf and having chosen the story, the user can either read it from the screen or have it read to them by the computer. The voices used to tell the stories are almost all of famous personalities who have given their time in the knowledge that some of the profits will go to the Rainbow Hospice.

Celebrities include Gary Lineker and Anthony Andrews, (hoth of whom are patrons of the Rainhow Children's Hospice), Jimmy Nail, Victoria Wood, Anneka Rice and Mike Harding to name but a few. Each of the readers have been perfectly matched to the story so that their regional accent enhances the text. Irish actor Derek West is wonderfully over the top as he reads the story of 'The Farmer in his Dell'. Animations add to the interest as well as to the humour which varies hetween subtle and groan-inducing.

In use

The software features switch control as well as keyboard control so that it can he used by most people regardless of age or physical impairment. I've said this hefore, but I think it's worth another airing. Although this is aimed primarily at school, parents will daubtless huy it for their children to use at home. To get the very best from this material, I feel very strongly that the parents should sit down with their children to work through the software. It is wholly inappropriate to huy material like this and give it to your child to keep them quiet while you pursue some other activity. You'll hoth get so much more from it going through it together.

Conclusion

lt's hard to criticise this software. Even the unfinished pre-release version I saw is so polished. The graphics are as good as any I've seen and the whole presentation has clearly been very carefully thought out. The digitised speech is crystal clear and read with real feeling. The storyline is varied and will not only appeal to youngsters, I'm sure parents will equally enjoy the 'off-the-wall' explanations of the some of the events.

The reading content goes well into Key Stage 2, which is intended to be up to 10 to 11 years of age. My only concern (and this is not a criticism) is the suitability of the nursery rhyme characters for children of this age.

My seven year old twins are just about past nursery rhymes. Simon in particular was not over-keen to spend too much time with the program, even though his reading would certainly have improved quite considerably by the sustained use of this material. Sally, on the other hand, was motivated by the characters and continues to gain a great deal from the program. Younger children, I feel, will be more comfortable with the material and indeed there are some exercises aimed at Key Stage I and pre-school. Once at that difficult age where street credibility becomes increasingly important, this software, sadly, is likely to have less appeal.

Of all the CDROMs I've reviewed, this rates as one of the best both in terms of original concept as well as

The talking books in Stories from Rainbow's Edge are read by some very well know personatities brilliantly matched to the character. One might even say, type-cast. (No offence Jimmy.)

The Rainbow Hospice

The Rainbow Hospice receives patients up to the age of 18 years. It is a self-run organisation which receives no funding whatsoever but relies solely on voluntary contributions. The value of the work they do for terminally ill children cannot be measured. If you would like to make a contribution please send it to Vanessa Cox, The Rainbow Children's Hospice, The Cope Children's Trust, COPE House, 6 Tower Street, Leicester LE1 6WS.

the way the project has been executed. The question is not 'Will it win an award?', hut 'How many awards will it win?'.

The cost

Much Ado at Rainbow's Edge will cost £49.95 plus VAT whilst Stories from Rainbow's Edge will he £39.95 plus VAT, with a percentage of sales going to the Rainbow Hospice. In addition to the main products, there is to be a resource pack of photocopiable worksheets and a disc of high quality Drawfiles of all of the characters featured in the stories. The worksheets will be similar to those on the CD-ROM, but are being offered in this format primarily for people who do not have access to high quality printing. The cost of the resource pack has yet to he finalised but is likely to he about £12, with a similar percentage of the profits going to the Rainhow Hospice.

By the way, the reason Humpty couldn't be put back together again was No, you'll have to buy it to AU

Kimberley Computers Ltd.

16Mb Option, add £35 & Vat.

Thinking of buying a 5x86 PC card for your Risc PC?

Think Again....

Trade in Deal Please ask!

Why not buy a complete 5x86 or Pentium PC - Here's How:

Buy a Complete system with a monitor & keyboard switch box. This gives you complete compatability & it runs a lot faster than the PC card will. Has its own 8Mb RAM, a fast 8x CD ROM, Large Hard drive, fully expandable system. This system will outperform a Pentium P90!

Leasing for Schools can be arranged! Other Higher Spec systems available, Call.

CASIO QV-10A

LCD Digital Camera with TFT Active Colour Display.

£390.00 £458.25 E

Picture (right), taken by the Camera

Portable Camera, capable of storing 96 images, on 16 Mbit Flash Disk. Each picture can be downloaded to your PC / ACORN or MACINTOSH (specify)

Pictures taken in True Colour mode. Excellent results

Full tilt n view lens, zoom facility, brightness control, automatic variable shutter

Built in Timer, instant playback,

Ideal for taking Product Photo Shots, Photos of groups, Field trips, Estate Agents, capturing experiments, etc.

No Film purchases or duplication costs at all. Simply press the button, and save to your PC /MACINTOSH (Acom software - extra)

Video Output to TV screen, Remarkable peice of Hardware.

Making ovies Leo Telling looks at Videodesk and the future of desktop video

've seen the future of desktop video and it works... well nearly. Videodesk, the long awaited video digitiser/compressor/

editor package from Irlam Instruments is nearing completion, and a fully working, although not fully featured, version should

be on display at Acorn World.

Solid base

Jim Irlam and his team have rather sensihly opted to build up the features in Videodesk from a solid hase, rather than show something that does everything but

has more crashes than the M25 in the fog. By the time Acorn World comes round Videodesk should he offering full drag and drop video editing at a quality previously unseen in the Acorn market,

Consisting of three basic ingredients Videodesk is much more than the sum of its parts. The card itself is the heart of the system. a professional quality video digitiser and compressor which uses Irlam's own moving JPEG compressor engine.

The Risc TV overlay card backs up the digitising side hy allowing moving video to be mapped directly on to

the screen, without sacrificing any precious processor bandwidth. Finally, the editing software ties the hundle of goodies together by presenting a powerful, yet simple to use, editor with the now standard time-line style interface.

Something special?

But why care about Videodesk when Eidoscope and CineWorks do pretty much everything? Well, when you see what it can do you may well slied a few real tears as you throw your old video editing kit in the bin.

Videodesk not only promises to deliver real non-linear editing at better than VHS quality, it actually does it. And the cost of this mini-marvel? Less than the cost of two edit spec VHS machines, but a little more than a decent camcorder - the final price is likely to be around £1,200. However, when used with a conventional camcorder (Hi8, Video 8, VHS, or even one of the new digital formats) it will most likely he the camcorder that limits the quality of your work - not Videodesk,

What can it do?

Videodesk can record and compress, full frame, 24-bit video direct to disc iri real time. Not the tiny 160 by 128 pixels of a standard replay file, but

monstrous 768 by 576 pictures. When played back through a second external monitor (a domestic TV will do) the resulting pictures are stunning.

Add to that the facility to make audio and video edits, fiddle with the sound, add captions and video effects, and I can only conclude that affordable desk top video has finally arrived. Videodesk might not be in the price range of the casual dabbier, but anyone who takes home movies seriously, or has an interest in the world of professional video will be more than interested.

Speed and image quality

The pre-release version I saw was pretty solid, and although it didn't offer all the bells and whistles of Eidoscope or CineWorks it blew both of them away as far as speed and image quality are concerned. By using its proprietary moving JPEG compression codec and a special overlay card Irlam has bypassed the hottleneck of the Risc PC bus, allowing full screen compression and playback - without the aid of a StrongARM.

000 000 00 E

- + + +0(B | B | W

In order to demonstrate the power of Videodesk, Irlam is currently producing a short video which, as well as showing off the features of both hardware and software, has also being completely produced using Videodesk,

Again it is hoped this will he ready in time for Acorn World. Irlam seems committed to developing the project to compete with the big players in the game, and at this stage the signs are that Acorn is also betting on the system hecoming a winner. Watch this space...

S o far, most of the HTML I've described has been standard, normal HTML. It will work on all browsers, you need to have a good grounding in it to write HTML, but it's unlikely to win you any awards for artistic merit. It gives you very little control over how your HTML will look - decisions of that sort are all taken by the browser, and you trust it to make sensible choices.

There's absolutely nothing wrong with HTML of this sort, and there are thousands of commonly-read pages on the Web that use it. But, if you want to, there are plenty of ways to change how your HTML appears. They're not standard, and they won't work on all hrowsers, but usually the worst that happens is that they're ignored by older hrowsers. Therefore, provided that you don't rely completely on them, there's no harm in using them.

Alignment

In standard HTML, paragraphs, headings and so on aren't tied to any particular alignment. Paragraphs are usually aligned left, with some headings being aligned centrally. However, you can add an align attribute to paragraph and heading tags which on many browsers will change the alignment. They can be aligned "left", "center"(sic) or "right" - note that all HTML is spelt the American way.

Older versions of Netscape Navigator (a non-Acorn browser) didn't support this, but invented a <center></center> tag pair to perform the same job - most browsers support this as well, but it's generally hetter style to write:

 ... than:

<center> ... </center> The corresponding <right></right> tag

Colourful pages

Extensions to standard HTML are discussed in this issue's HTML tutorial by David Matthewman

pair exists, but is rarer. The use of align="left" and align="right" with the tag is subtly different. With images, the image is aligned either to the left or the right of the screen, and text flowed round it - rather as it would be in a frame in a DTP package.

Unfortunately, none of the current Acorn browsers supports this attractive effect, although the next release of the ANT Internet Suite will.

Colours in HTML

When specifying a colour in HTMt., it is given as a three-byte hex number "#rrggbh", where rr is the red intensity, gg the green and hb the blue. This means that #000000 is black, #ffffff white, #ff0000 red, #ff9900 orange and so on (the colours

aren't case-sensitive). The individual hytes can take any value, so that in theory you can specify the full 24-bit range, although in practice the display will he limited by whatever screen mode you are in, with a judicious allowance for dithering on some browsers.

The hash sign '#' in front of the number is compulsory, and it is safer to enclose them within double quotes. Colours on RISC OS are commonly specified as threebyte numbers, so this system should he reasonably easy to learn, provided that you know your hexadecimal. There is a move to have 16 standard 'named' colours in HTML, but until more browsers support them it's prohably not a good idea to use them. In any case, the proposed colours are based on the Windows standard palette colours, so they should probably be boycotted on principle.

So, now you know how to specify colours in HTML, the next question is where. The most common place that colours are used in HTML is in the <body> tag, to set the background and text colours. Before discussing this, I need to mention another use of the <body> tag to set a background image.

Body tagging

In standard HTML, the <body></body> tag pair marks off the HTML to be displayed, and has no other function. However, most browsers now allow you to specify a hackground image for the page in the tag by using the background attribute. If you write:

<body background="image.gif">

then the file image.gif will be used as the background to the page. If the file is smaller than the page (it usually is) then it is tiled to fit - there is no option in HTML to scale or centre it as there is with tiles on the Desktop.

Obviously, if you use a dark image, your text may not show up very well against it if it is rendered in the default black. For this reason, if you use a hackground image, you should always set the five other attributes that set the text colour as follows:

- · text="#rrggbb" text foreground
- bgcolor="#rrggbb" hackground colour, and the colour that the text will anti-alias to, if you're lucky enough to he browsing using RISC OS. Again, notice the American spelling - it won't work if you write 'bgcolour'.
- Hnk="#rrggbb" link colour, the colour text in an anchor tag will appear (see August for anchor tags).
- vlink="#rrggbb" visited link colour, the colour that a link will he if it's a link to a page that you've already visited.
- alink="#rrggbb" 'active' link colour. A link may flash this colour when clicked upon, although a few browsers also consider links to named tokens within the same page to be 'active'.

The reason that you should set all of these is that it is perfectly possible for someone's browser to be configured by default to show white text on a black hackground, or indeed any combination of colours that the person using the browser happens to like.

If you impose a hackground image on them, then you should also suggest a combination of colours that goes well with that image. I came across one page where the background was a blue fractal pattern, but where the designer had forgotten to change the link colour, so that on most default browser settings the links were invisible. Not helpful.

The font tag

As well as setting colours globally, you can set them locally with the tag pair. This non-standard tag takes a number of possible attributes, one of which is color, specified in the same way as above. Therefore:

This is some blue text

A gratuitous Babylon 5 screenshot, illustrating a tiled background and very non-standard colouring

will colour the word 'hlue' blue (at least on browsers that understand this tag).

The tag can do more than change colour - it can also he used to change the size of the display font as well. This uses the size attribute to specify either a particular font size, or a change in size from the current font. Therefore, you can have either:

This is some large text

This is two sizes larger than before

Font sizes are in arbitrary units on a scale of one to seven - it's up to the browser to map these to actual point sizes. The base font size on most browsers is three, so one and two are smaller fonts than normal, and four to seven are larger than normal.

I have rarely, if ever, seen changes in font size used well. After all, it's not a very common practice in standard typography for a good reason - it tends to look messy. If you decide your pages lack the extreme avant-garde look then by all means use it, but you didn't hear it from me, OK?

Other tags

There are a few other tags and extensions to tags in reasonably common usage that extend the HTML standard. Last issue [introduced the bold and italic tags - there are also:

- <u></u> underlined text
- subscript
- superscript
- · <big></big> larger text
- <small></small> smaller text

and a host of other less common ones that I haven't got room to list ,.. with one exception. Netscape invented a tag called the blink tag (<blink></blink>) which caused all the text that it enclosed to flash on and off. This was so irritating that even Netscape relented eventually and now disapproves of the tag (besides, it's now invented the animated GIF which is the blink tag with orders of magnitude more potential for annoying people). Never use the blink tag; you'll get flamed. By me, for a start.

Next issue I'll be taking a short break while Stuart Halliday of the Cybervillage decribes how to get the best from your images.

Setting the standards

When I write of 'standard' HTML, I am in fact referring to the HTML 2.0 standard published by the World Wide Web Consortium (W3C) in late 1994. This is a convenient reference point, as most browsers support at least this standard (even text-only browsers support it as best they can). We've covered most of the HTML 2.0 standard in the issues before this one; only forms and some of the header tags have been left out.

There have been many extensions to this standard, with new tags being added by a number of parties. The most significant (and most of the ones mentioned in this issue) were added by Netscape Communications Corporation for its browser Navigator. Since Netscape Navigator has been for some time the most popular browser on the Web, it has driven the standards before it to an extent. Most pages on the Web incorporate some tags that originated at Netscape.

W3C tried to establish a new standard for HTML 3.0, but overreached itself. The new standard was judged to be too ambitious and, crucially, wasn't compatible with existing practice on the Web. A number of elements from that standard have found their way into browsers from both Netscape and Microsoft (and, soon, ANT Ltd), and a new standard has recently been published by W3C incorporating many of the best of them. This standard is termed HTML 3.2, and is already supported to varying extents by Acorn browsers.

To find out more about standards on the Web, visit the W3C web site at: http://www.w3.org/

A3000 upgrades

Memory

I-4Mb	£85 (99.87)
I-2Mb	£39 (45.82)
(See also the "2nd user" section)	
1-2Mb (upgradable to 4Mb)	£54 (63.45)
2-4Mh upgrade pack	£45 (52.87)
4-8Mb	£175 (205.62)

The above upgrades are all constructed on four-layer boards, as recommended by Acorn, Gold plated connectors are used for reliable contact with the A3000 main board. There are no clips or wires, and no soldering is required (except 8Mb). Full instructions supplied. Some older types of 2Mb board cannot be upgraded to 4Mb, but we offer a trade-in allowance. Please phone for details.

A range of internal hard disc upgrades is available. The upgrades simply plug into the internal expansion slot. Also suitable for the

A meeting of the minds

uring the last couple of years, two companies in particular have been responsible for producing some excellent datafiles for most areas of the curriculum. Between them, Anglia and Longman have a huge catalogue of datafiles, many of which contain so much support material that they could be regarded as 'off-theshelf' teaching modules. The problem is that if you want to use them, you need to use the appropriate proprietary database program.

Unless you have enough capitation to buy both, whichever database program you choose will deny access to the datafiles of the other. (Longman's Pinpoint files won't run with Anglia's KeyPlus and vice versa). If, like me, you use another database you won't have access to any of the datafiles which really is a shame. (Unless you can afford all three in which case that really will confuse everyone.)

Call me biased, but for me, lota's Datapower is the database for Acorn computers. Apparently, (and I didn't know this until recently) KeyPlus files have limited compatibility with Datapower in so far as Datapayer will read the text from a KeyPlus datafile and create a Datapower datafile. There will be no graphics and the layout will be rather basic, but it does work.

Anglia have been talking to lota and have created improved compatibility between Datapower and KeyPlus files so that graphics will be imported. In addition to the developments made to Datapower itself, lota and Anglia are working together to ensure that files load into Datapower's display appropriately. Anglia will gradually be upgrading their datafiles to include a layout module which Datapower will automatically recognise.

Even without automatic layout, this I believe, is a very significant advance in data compatibility. Are you listening, Longman?

> Anglia: (01603) 615151. lota: (01223) 566789. Longman: (01223) 425558.

Aerial photos

Geography departments will be interested in some new products and a new service from Photoair (who produce the CD-ROM London from the Air - reviewed January 1996). PhotoAir now have collections of aerial photographs taken along UK rivers. Most rivers in the UK are covered and each pack contains 10 high quality digitised aerial photographs taken along the river's length,

The 10 pictures include the source and month and eight shots along the river showing important features such as islands, meanders etc. An accompanying text file gives location and map reference. Select two UK rivers for £40 the pair.

PhotoAir will also provide aerial photos of your school site and the surrounding area. The School Locality Pack, as it's known, costs £64,50 for three photos: the school campus and two nearby locations. (There is heavy emphasis on the word 'nearby' - Dorset schools, for example, may not choose a site in the Midlands)

Although this may seem a little pricey, it costs real money to fly an aeroplane and most of the price is for this. Once the pictures have been taken, you can choose from A4 colour prints, and/or have the pictures digitised. The cost of digitised pictures includes an unlimited site licence plus the right to use the image in a school brochure and place it on the Internet.

PhotoAir: (01733) 241850 or fax (01733) 242964.

No Hodge Podge for Acorn

"Visit 'Hodge Podge House' with Sherston as they go online with AOL the world's largest and fastest growing Internet provider", says the press release. It continues, "Sherston is lauoching Hodge Podge House, a new interactive experience to be found within the AOL's Kids section. This unique area is full of fun and meaningful activities for children hetween the age of 5 and 13 years."

Looks good doesn't it. Unfortunately if you use an Acorn computer, you can't access this software. At the time of writing, there are no plans to produce an Acorn compatible version. It's a great shame that Sherston, a company synonymous with Acorn software are involved in a venture that excludes Acorn users. Perhaps someone might reconsider.

Touching a raw nerve

After my comments about the Lindis Touch Screen in the September issue, Resource felt that I had implied Lindis had made a major technological hreakthrough in producing a touch screen which is compatible with all existing software. They pointed out that their Touch Windows has been around for some time, as has another by SEMERC, both of which may be regarded as alternatives to the existing mouse.

To make use of the Global Positioning System, you need a GPS receiver. Handheld, self-contained GPS receivers are about the size of a mobile phone having a small keypad and a LCD screen to show your location. Many, hut not all, have a port into which can he connected a computer – presumably a portable computer – where the data can be processed further. However, connecting a Pocket Book to one of these seems like a duplication of hardware (you'll have two screens and two keyhoards where only one of each is required).

The hardware

Positioning International Ltd can supply a GPS receiver which has no keyboard or screen, just a cable with a plug on the end. Manufactured hy Garmin, it connects either into a specially designed cradle which fits into a car or boat and powered from the clgarette lighter, or directly into the Pocket Book via the A-Link.

The cradle is a very cleverly designed product which securely holds the Pocket Book and automatically taps into the serial port and external power socket. The cradle comes with a variety of hardware in the form of hrackets and screws and is designed to be fixed to a suitable place in the car. However, as I had to return the unit to Positioning, I chose to fix it to the dashboard with copious quantities of blutack

The software: FindIt

FindIt is available on either SSD or floppy disc. If purchasing the floppy disc version, you'll probably need to buy a fairly meaty SSD to hold all the files and the main programs, but if you have a serial link and can run Windows, this is by far the best option. Transferring from disc to Pocket Book has been made as simple as it's possible to be and you have the option of transferring the files and programs to any

Finding your way

Continuing from last month's introduction to GPS, Geoff Preston takes a more detailed look at two solutions for touring the country

combination of main memory, drive A or drive B,

Once installed, the program is launched in the usual way, by highlighting the icon and pressing enter. If a GPS receiver is not present or there is a weak signal, the software offers a test mode or demo mode. The manual suggests trying the software without the GPS receiver connected so that you may become familiar with the software.

This, I discovered, is a very good Idea as the program includes an enormous number of keyboard short

cuts to access the different modes, including a real time compass.

Positioning E.T.F: Moving Away Distance: Speed: 0.6 TRING 3.1 IVINGHOE 4.3 BERKHAMSTED 4.9 LEE CLUMP Display Destination Comp Prev Next

Shows current distance from destination and four nearest places from location

NGR: SN473
s- O
, E

Useful in Europe, FindIt shows you the way back and displays a compass

FindIt in use

FindIt is supplied with databases of UK place names, road junctions, fast food outlets and petrol stations. The program, therefore, is most suitable for use in the UK. When you start a journey, enter your destination and FindIt will more or less take you there. The display is clear and simple and provides up-to-date info which you can glance at from time to time. If used in this way, you

just use the display; it shouldn't cause any problems. Don't attempt to use the computer (such as entering place names into the database) while on the move:

As you're driving, the direction arrow constantly changes direction, as do the arrows for the four nearest places, road junctions, fast food outlets or petrol stations, depending on which database you're currently accessing. Along with this information is the estimated journey time remaining and the current speed. The journey time is not very reliable for several reasons, not least of which is the fact that the distance is calculated 'as the crow flies' and consequently less than the actual road distance. I also found the speed was consistently 5 to 7 per cent helow the actual road speed which is way outside the

Adds a moving map display to AutoRoute Express

Plotting the path (in grey)

expected inaccuracy from the car's standard speedometer.

Although FindIt (or rather the data currently distributed with it) is intended for use in the UK, there is one feature which makes this package suitable for use on the continent. FindIt can offer the opportunity to enter the name of the current location and will automatically take the current NGR and add both items to the current datahase. (NGR is the National Grid Reference which takes the form of XXEEENNN eg TQ175302 which is Horsham.)

Developing that idea, you can enter points along the route and compile a log of the journey which will enable FindIt to provide a more accurate route for the return journey. While on holiday in Europe, I entered the name of the camp at which I was staying, and while touring, entered strategic points along the way which enabled me to tour the country at leisure and use FindIt to get me back to the camp.

Alternative software: *Mapper3a*

Once you have a GPS receiver, you can use the latest version of Mapper3a to decode the information. Mapper3a can he downloaded from Steve Litchfield's 3Lib PD and Shareware library. Remarkably, it is shareware and will cost £14 to register. Apart from the ethical point of view, registering does unlock several features of the software making it slightly more friendly or usable in certain areas.

Mapper has been covered in Acorn User

before. It's a very powerful geographical information system which has the ability to use GPS data, provided a suitable GPS receiver is connected. I used the same receiver with *Mapper* as was supplied with *FindIt* and in general, it worked very well.

There were a couple of slight glitches, however. The first is that it seems to need a much stronger GPS signal than FindIt. The second hiccough was when returning home – the system stopped working while travelling on the M25. Perhaps that says more for the road than the software, but it meant the moving map display had to be 're-engaged' which was not a problem other than it lost the trace. (One of the few options available in the moving map display is the facility to leave a trail showing where you've been.)

Other software

AntoGPS adds a moving map to Psion's AntoRoute Express. If you've got AutoRoute, this is a worthwhile extension, even if you don't have a GPS receiver as, among other things, it displays the cursor position grid reference on the AutoRoute screen. AutoGPS is available from 3Lib.

Conclusion

If you get a buzz from people gathering around your car with their mouths open, and then having to answer lots of questions ahout a gadget they've probably never heard of, let alone seen, this is prohably the best piece of kit around.

If you do a lot of touring, FindIt is probably a worthwhile investment, although it

will be a hetter proposition with European data. However, if European data was provided to the same detail as UK data, you'll need a really large SSD or split the data into countries. Unlike FindIt, Mapper3a really only works on UK mainland as the only GPS data output is the moving map, and at present that is only UK and Ireland.

For use 'on the road' (as opposed to 'at sea'), I wouldn't care to say that GPS is any better than a traditional map for the purpose of touring, largely hecause of the limited amount of information you can get on a screen and the fact that signposts around the country are really very good. But this is certainly a great deal more fun.

As for the driver using either of these programs in a moving car, it sounds too dangerous to contemplate. I suppose one could argue that they are no more or less distracting that the average in-car sound system. Positioning Ltd claim that their system is totally automatic and just provides information for the driver to read like any of the other instruments in the car. Indeed, the system was designed for sole travellers. Even so, I would still prefer to leave it to the navigator.

Comparisons contrasts

The Exploring a Contrasting UK Locality: Glasson software package was devised to meet the need to integrate IT into Geography teaching and learning in the primary classroom. The Geography National Curriculum Orders state that children in Key Stages 1 and 2 should be taught to use IT to 'gain access to additional information sources and to assist in handling, classifying and presenting evidence'.

Why Glasson Dock?

Glasson is a village and small port on the Lancashire coast. A combination of geographical features make it ideal as a contrasting location. Although it is a small community, it has an industrial base, a range of transport features and it has adapted to many changes over time. Overall, because of its rich mix of settlement functions, Glasson can be contrasted with many other UK localities.

I decided to assemble a package on Glasson which enabled children to acquire and process information using IT. I would use authoring software alongside datafiles with information about local children and their lifestyles. The latter would be meaningful and also a vehicle for developing information-handling skills. I wanted the package to be professional in appearance, but simple enough to inspire children to produce something similar ahout their own locality.

Choosing the software

I decided to use *Genesis II* as the authoring software because of its potential to produce an attractive package in very little disc space, making it usable on all Acorn machines. I was very conscious that, although many schools use Acorn systems, most do not have state-of-the-art machines – in fact, the A3000 is a familiar sight in many of the classrooms I visit.

The insertion of photographs of the locality into *Genesis* was achieved by the use of Photo CD. I visited Glasson and took photographs of the key geographical features, including the Dock and the canal hasin. I was lucky in that a ship was being

Imloaded and so I was able to take photographs of its cargo on the quayside and the mobile crane that is part of the port's facilities. The film was processed and a week later I had the Photo CD ready for use.

Having experimented with presentation software before, I was aware that the application needed to have a simple and uncluttered interface if it was to be successful. I chose a white background and included no more than two photographs or text frames on each *Genesis* page – 'frame' is the program's jargon for the rectangular boxes, containing text or graphics, that can be created on each page by clicking and dragging the mouse's left button.

Navigating and linking

I decided on two methods of navigation through the package – the user could either go to relevant pages by clicking on the lahels on a sketch map of the village or could move from page to page by doubleclicking on right and left pointing arrows.

Making links from page to page was relatively easy as *Genesis* allows links to be made from any frame on any page. When the mouse pointer is over a frame, pressing the middle menu button on the mouse produces a menu with 'Link to' as an option. Sliding off this option reveals a set of possible linking actions which can be dragged and dropped on to the linked page.

1 used PhotoView tn process the Photo

The Glasson application title page

A Paint file map of Glasson in a Genesis frame

A link to the datafiles

CD images at a quarter of the hase size and then transferred them to the frames I had created on the *Genesis* pages. Some image quality was lost, but I was able to squeeze over 20 colour photographs into the application! To save time I typed my text into !Edit and then dragged and dropped the text into frames on each page. The finishing touches were added using !Draw and !Paint files.

The most laborious part of the process was the establishing of links between the sketch map and the relevant information pages. Frames with red text were created over parts of the map and then links to information pages added by the process described above. By the time the page was finished it contained 16 links and was placing severe strain on the memory of my A3020.

Needless to say, the machine crashed at this point and I was forced to re-create the page again almost from scratch. In the completed application, the village map

and

Tony Pickford (senior lecturer, University College Chester) takes us through the process of compiling a piece of software which integrates IT and geography

The most complex page shows a Drawfile map with transparent text frames on top

A PinPoint datafile created from questionnaires and a sample graph

page still takes longest to load and on any machine, apart from a Risc PC, it is advisable not to keep too many other pages open at the same time.

The questionnaire template

Having completed the Genesis application, I turned my attention to the datafiles. My idea was to create a questionnaire template using the Junior PinPoint program this could be used to gather information from children in Glasson and re-used by children in other schools so that they could make comparisons between localities and lifestyles. After much consideration, I settled on the following

- What is your name?
- · How old are you?
- · How many brothers and sisters have you got?
- · Where do you live?
- How do you get to school?
- About how long does it take you to get
- · What type of house do you live in?
- Does your house have a garden?
- In which shop does your family do its main weekly shopping?
- In which town does your family do its main weekly shopping?
- · What do you like most about the place where you live?
- · What do you dislike about the place where you live?

The questions had to be child-friendly and also a source for good-quality geographical information. I tried to mix personal questions, which the children would enjoy answering, with ones which addressed geographical issues such as the quality of the environment, journeys, transport links and housing. When setting

up the questionnaire in Junior PinPoint 1 used the program's capability for defining specific types of questions; some requiring text answers, some multiple choice and some requiring numbers to be inserted. This mix of types enabled the data to be graphed and charted more effectively later

Using real data samples

With the questionnaire complete, I sent copies to Mrs Hall, the head teacher at Glasson CE Primary School, and also gave some to a teacher in an urban school. This enabled me to have a sample comparison datafile in the package. Both sets were returned quickly and I set about the job of entering the data. This was a rewarding task in that, once entered, the data could be analysed and explored to reveal some interesting comparisons and contrasts. There was not, for example, a marked contrast between the numbers of children living in different types of homes in the two localities.

Contrasts began to appear in areas such as the time taken to get to school and the modes of transport used. In Glasson, children's dislikes centred mainly on lack of facilities, although there were some idiosyncratic dislikes - one child hated 'the noise of tractors' and another child, who had recently moved from an urban area, disliked the dawn chorus of birds that woke him up in the morning.

Analysing data

Use of the analysis tool in the Junior Pin-Point program would allow children to find answers to questions such as:

- · What is the average number of hrothers and sisters in the two localities?
 - Does it take longer for most rural chil-

dren to get to school?

- · What is the average time in the two localities?
- · What is the average time it takes urhan and/or rural children to get to
- · Which is the most popular shop for weekly shopping in the two localities?
- · Do rural families travel further, and to a wider variety of shops, than their urban counterparts?
- How do the types of houses in the two localities compare?
 - · Do all rural homes have gardens?
- · What do the rural children like about their locality?

The final test

As a final test for the package I took it to Glasson school to show it to the children and their teachers. I will admit that I felt some trepidation at the prospect of showing my work to, possibly, its most critical

In the event, the children were very enthusiastic about both the application and the datafiles. They pointed eagerly at the photographs and studied the maps carefully. Thanklully, I appeared to have got all my facts right and Mrs Hall was pleased at the prospect of being contacted by other schools who might use the package.

The ARM Club Dept. AUM FREEPOST ND6573 London N12 0BR

Email info@armclub.org.uk http://www.armclub.org.uk/

See us at Acorn World '96, 1st-3rd November

The ARM Club will be fronting the Club area on Stand 386, just at the top of the stairs. Come along and meet representatives from a number of local groups as well as The ARM Club.

The Show will also see the launch of the latest addition to the Club's product range - a must for all those buying a StrongARM card. StrongGuard! will enable a number of games and desktop applications to run on a StrongARM that would otherwise not.

ONLY £25.00

FULLY INCLUSIVE

Upgrades from Game On! available

Quality in affordable software!

Please make cheques payable to "The ARM Club". For more details, write or send £2.00 for a comprehensive information pack including sample magazine and disc.

Affiliated to The British Association of Computer Clubs

gauntiet has been thrown down to any Acorn games progremmars atalwert enough to attempt the chelienge. Shaun Hollingworth of Krisalie Sottware has announced to the Internet at large that the company la willing to allow the release of Soccer Kid as a aharaware title -- providing an individual or e teem of progremmers steps forwerd end offers to code it. Sheun expleins that Kriselis is performing this gesture es a sign of good will in raturn for the aupport that the Acorn community has given in the

past. This is an excellent opportunity for any budding codars out there to get into tha scene – tha aource code is available for both the Amiga and 3DO versions of the game, and perhaps most attractive of all for tirst-time programmers, you don't have to think of a storyline.

For those who haven't seen the geme before, it revolves around a youth with exceptional ball control as he attempts to rescue shards of the World Cup trophy.

Whet makes this platform game that bit dif-ferent is the fect that Soccer Kid can use his

football to great effect - either in disposing of enemies or as a useful trampoline to reach higher invals. I was immediately attracted to its gemaplay tha first time f piayed, so the thought that it might be released for the Acorn platform comes ea something of e dreem come true.

Tha details ere a little sketchy as I write, ao if you're interested (and I urge you ell to think about this seriously) drop me e line or write to Sheun directly at shaun@moetlane.demon .co.uk. A lot of people have been bemoaning the lack of ectivity in the Acorn games market; here's your chence to help turn things

I'm happy to announce thet Peredise has done its bit to relieve the somewhat persistent games drought that's been efflicting the Acorn world for the pest few months. With the release of Inferno, the team has iaunched its own budget eoftware range, end t hope it will be edding more gemes in the near

Peradise can be contected et 12 Kings Close, Longburton, Nr. Sherborne, Dorset, DT9 5PW. They're wired up to the Internet, and you can drop e line by e-meil et Info@peredise1.compulink.co.uk. Interno costs £9.99, end cheques should be mede payeble to David Flynn.

Severel months ego, I mentioned a game-in-progress by Mike Goatly, beguilingly nemed Rock Herd Fluffy Thing. Best described

es an ercade-style puzzia game, RHFT foilows the exploits of something ekin to a furball on iegs es he, she or it races round tortuous routes to collect diamonds. There ere meny treps to trick the unwery, such es slippery ice sheets end electrified tiles, end 35 levels to enjoy.

Tha game's finelly complete. and It's available for £7 trom Mike Goatly at 20 Ely Roed, St. Albens, Herts, AL1 5NA chequee should be made payable to M. Goetly. I hope to review the full game soon, but if you've got Internet accass, you may want to wander over to the Acorn games section of ftp.unlstuttgert.de, as Mike's told me he's uploading a demo there.

Richard Chiswell of Beebware has written to me to ennounce his latest games-related utility a cheat databese boasting '142 cheets for a wide renge of Acorn games'. Requiring RISC OS 3 or ebove to function, Richard'e program sits on the icon bar and gives access to e range of Information snippets eccessible at the click of en icon.

The range covered is sizeeble, including some populer PD titles end e few infocom edventures quite a brew of different styles. The content of the tips varies, but generally speaking you'll get e list of passwords for a game, eome hints to improve your gemepley or even e cheat mode or two. The meterlef is all very useful, berring the odd spelling error here and there. You might find you recognise some of it; I couldn't say for certain, but e few of the tips seem particularly familiar - perhaps they originated in the pages of one of the Acorn magazines?

The utility also provides a tew other tunctions, including e scraensaver, a clock and en hourly tima signal. It's e bit of e mystery why these have been included, for although they might be useful they certainly wouldn't entice me to spend eny extre money on the product; there's a iot ot good-queilty public domain soffware out there that give this functionality end more.

If you're desperete for e cheat compendium, Acom Cheat might be worth a look - however, it's rether expensiva for what it is, especially if you can download one of the Acorn games pages on the Web or you've got stacks of back issues lying around, it costs £7.50 for a eingle user copy end Beebware, its supplier, can be contacted at 83 Forest Road, Huncote, Leicester, LE9 3BH.

i'm afreid I've no idea what Andrew Docking is going to cell the title he's currently working on, ao Futuristic 3D Racing Gama will have to do for now. I

don't think I need to expand on the product's theme - which is iortuitous, as et this stage l know very little concerning the game's plot. However, Andrew's briefed me more fully on the technical nature of the gama texture mapping will be used throughout, although slower machines will be catered for with a detail option. The screenshots shown here are from an early stage in the development, and Andrew promises that the graphics will be much improved on in tha final version.

With five craft to choosa from, each with its own handling styla, Andrew's game will allow you to scream round a wide array of tracks in tournament and practice modes, time trials or chese modas. He's currently working on an artificial intelligence routine to give the computer players e little more life, either making them nervous if you driva on their tail, or imbuing them with the silicon equivalent of road rage. I'll keep you posted with any developments.

I've just got time to mention a new strategy game in development by Chris Davis. Namad Age of .War, It's already visually impressive and the brief flick through the prototype manual laads ma to balieve that if it reaches completion, It'll be a most absorbing product indeed. I hope to receive some more information in tha near luture – If you've got any particular lea-

tures that you'd want to see in the Ideal strategy gama, why not write in and I'll pass your suggestions on.

And finally

Let's have a quick straw poll. Rob Templeman was last spotted mulling over an idaa to convert the engine of his game Destiny so that it would run on multiple procassors on the Hydra. It goas without saying

that this would affect the launch date, and it might even elter the gameplay too. After all, with oodlea of procassing powar available, how many cuts to the gama would be necessary before it would ba playable on a lowend machine? Then again, i must admit that such a gama running at full pelt on an Acorn dream machine causes me to salivata.

What would you prefer? An

'ordinary' game that runs at acceptable speeds on all machines, or one of mind-wrenching realism and wondarful visuals that needs a varitable clutch of silicon before It'll run properly?

The PC philosophy is clear – forget about the low-end users and alm straight for the processor's throat – but what do you think? Drop ma a line at Game Show, Acorn User, IDG Media, Media Housa, Adlington Perk, Macclesfield SK10 4NP or augames@idg. co.uk and let me know.

That's all spaca will allow for this month, but please join us again next tima for mora details of Shaun's Soccer Kid offer and updatas on the progress of all of the major games-to-be. Sea you then.

Meet Hugo

As our competition revealed, plenty of people write adventure games 'by hand', using no speciai languaga or tool. Tha internet adventura community (see the newsgroup 'rec.arts.intfiction') are pretty unanimous that one neede a design system though, and tha question 'which syatem is best?', sparka off regular end infinitely tedioua wars of invectiva.

Actually the options boll down to one: use the Brand X compiler to turn an X-file into some kind of program for an imaginery Xmachine, end then use en X-interpreter to play this game program on any computer of vour choice.

The Idea goes back to 1979, whan a group of students laft MIT and founded infocom. They wanted to move their famous mainframe game Zork to microcomputera. But it took a whola megabyta to run, at a time when a 16K Tandy was a mean machine by home standards. And until tha late '80s, thera were never less than a dozen homa computer modele in use. housing four or five different microproceseors: 6502, Z80, 68000 and so on. The Individual markets were small and the challenge was to find a product to sell to all of them.

So Joel Beraz and Marc Blank dasigned the 'Z-machine', a virtual computer using virtual memory. (In this they were far ahead of their tima - 17 years later and the Java bytecode machine may soon be in every phone and televielon set.) Infocom then wrote 'Interpreters' enabling individual computers to pretend to be Z-machines, and ao to play tha Z-coda games. (Kevin Bracey'e Zip2000 turns RISC OS into the Z-machine aven today.)

Graham Nelson reviews two designs for design

The new Brand X

From Advsya to ZIL, adventure design languages are legion, though they vary widely in qual-Ity. Brand X, whichever is tha current favourite, comas and goes; Brand Z, alas, ie long gona, in that fnfocom's own design language ZIL ('Zork Implementation Lenguage') no ionger exists. Inform complies a languaga of its own to the Zmachine, but infocom's compller ZILCH is missing, believed deleted.

Up to about 1994, the popular choice was TADS ('Taxt Adventure Design System'), a ground-breaking compiler by Mika Roberts; sinca then, Inform seems to have taken the lead, ao to speak, and Hugo is tipped by aome to ba next. Inform was so called because it forms infocom files (sorry), but why 'Hugo', i've no idea. 'Hugo waa a madman who believed he waa Hugo,' as Cocteau put It, and that will have

Hugo was begun by Kent Tessman only last year, and it has further to go, but paople are starting to use it. It is extremely similar in design and syntax to Inform; whereas TADS is fairly different, and it may be worth a moment to say why.

All adventure fanguages egree on the basics. The world is modelled by 'objects' which may be pleces, people or tangible things such as a lantern: each will have

Parallel lines: the same program in Inform (above) and Hugo (below)

some data attached, such as a name and a description, and perhaps aome programming as well. The lantern has to respond to baing rubbed or being switched off, and it's sensible to keep thosa parts of the program glued to the lantern'a definition.

TADS, Inform (and Hugo) egrea, aleo, that the best way to specify the world is just to spec-Ify the unusual things in it - the excaptions to what would normaily happen. Thus, a grenade is much like any other lump of matal, so the gama dasigner should only have to describe whet happens when its pin is

Since unusual things are going to happen, it can be hard for a game to decida whether a player's command is reesonable ("look under the carpet") or Insana ('iook under the sky'). TADS and Inform differ on thie. Under TADS, objects provide routines to 'verify' that verbs are sensible for them (for instance, 'eat' would not be verified by a brass bell, end 'ring' wouldn't by

a banana). This information feeds back into the parsar, which uses it to decide what the player Intended. If the player typed 'eat bell', while holding a brass bell and a chocolate beil from a Christmas trea, the parser would be able to infer which was Intended.

Inform, on the other hand, lets all grammatically correct commands through and relies on the objects themselves to sort out what ia sensible, by giving rules that apply 'before' and 'after' whet is suggested ahould happan. It's usually more concise, but meyba lesa elegant: the more I think about this, the less convinced I am that the right solution has been found.

Hugo has a compiler, for translating game descriptions into games, and an 'engina' for playing them: these are called 'hc' and 'he'. The standard distribution also comes with a concise and cleanly-written manual, and

Suzanne Vega, complete with brief sound sample, threatened by silent dragon

two example games: Colossal, the obligatory translation of the original maintrame adventura, and a Sample.

Hugo's syntax is so very close to inform's that they are almost machine translatable. I see this as a compliment, and Mr Tessman is entirely open about it. tt is a smaller and tidler ianguage, which is a good thing, but with defects: C programmers will not be pleased that tha 4.1 operator is right associative, ao that 'lllypad.trog.tongue' does not mean "the tongue of the trog on the filypad', i.e., '(lilypad.frog).tongue', but is instead meaningless. Likewise, bracing with "if" and "tor" statements is not quite right, and 'switch' evaluates the quantity being tested more than once, which is questionable. But these are niggling criticisms and will probably be seen to in future.

Hugo is not without innovation: it has an interesting idea of 'events' programmed to happen in various circumstances, and of 'scripts'. Most games have characters who wander around, picking things up and generally making a nuisanca of themselves. If they are to behava mostly predictably, a Hugo "script" is a neat way to program them.

The compiler 'hc' is in good working order but reports errors erratically or, in a tew cases, not at all. On my Risc PC it runs rapidly and without memory troubla; tor comparison, inform 6 compiles Advent in 10 seconds, and Hugo 2.2 compiles Colossal — a direct port ot

Product details

Product: Hugo 2.2
Author: Kent Tessman; RISC OS port by Colin Turnbull
FTP: ftp.gmd.de, under 'if-archive/programming/hugo'
Price: Free

Pros: Clean design • Good manual • Full scale language

Cons: Compiler slightly primitive • Perhaps too like Inform to be much alternative

Advent - In 39; but both are much tastar per source line than (say) Acorn C/C++, and speed will not be a problem in practice.

The Hugo 'engine' design has almitar limitations and virtues to the Z-machine: no graphics or dramatically lavish text, but good portability across a range of machines. The RISC OS port of 'ha' is single-tasking, playing gamea in a chunky text mode with the system tont, but is rapid and works perfectly. It will play, monochrome, in a desktop TaskWindow, but even under Zap on a Risc PC this is siow.

For all my reservations, Hugo is one of the handful of design systems to seriously address a complex problem; if it can be kept clean and neat as it develops, it'll go tar.

Indinasia ETAL

GTAC (Graphic Text Adventure Creator), by Andrea Gallo, has different ambitions, it's a desktop aditor tor creating simpla point and click games, with just a short menu of options for the player at each point. GTAC makes the most of this very lim-

ited idea of adventure game' by allowing graphics (Draw files) and sound samples to be added.

Animation and more flexible control over graphics are not available. which is a shame (it would be nice to be able to run short BASIC programs); and It's impossible to ask the player any kind of question which isn't multiple-choice, a pity as GTAC's best use might lie in writing educational

On the plus side, GTAC has variables and a built-in 'combat system' in the style of a role-playing game. The registered version comea with a nicely-typeset 25 page manuat, easily readable at a sitting; and the desktop interface la

straighttorward. There is one, very small, worked example game; Mr Gallo rightly says it is quick to construct; then again the average player will finish it in about 20 seconds.

'Interactive game books', so called, mazes of numbered paragrapha to read through and make choices between, used to be quite popular. GTAC is how you might computerise them, though i rather think the computer is what made them obsolete.

Product details

Product: GTAC

Price: £7 (or 15000 lira)

Pros: Simple • Well desktopped
• Nice manual

Cons: Limited range of possible games

NOT ONE BUT TWO NEW RELEASES FROM THE FOURTH DIMENSION

logic Mania

Presenting value for money in the extreme! FOUR brand new titles in ONE package.

Challenging your powers of memory, observation, dexterity, reasoning, logistics and of course, sheer common sense– LOGIC. This compilation takes puzzle solving to new boundaries and stretches the player(s) to the point of frustration.

PACK INCLUDES:

Atomix. Calculate molecular construction in this IBM conversion.

Tilt. 1 or 2 player mounting block game – on a see-saw!

Gloop. Drain-pipe construction against the clock.

Blindfold. A game of memory, negotiate the maze – Blindfold!

Logic Mania is available from all leading stockists of Acorn games. PRICE £ 34.95

The Real McCoy 5

ANTI GRAV

This is a brand new game on a popular theme, from the latest team of Acorn dedicated programmers. You must guide your craft around dozens of mazes & caverns.

CHOPPER FORCE

Superb 3D graphics, stunning sound effects and riveting game-play combine in this futuristic helicopter simulation.

Combat the modern terrorist in style! Previous RRP £ 34.95.

DEMONS LAIR

This is a great game for all the family, yet it will challenge the adventure enthusiast, with lots of tricky but logical puzzles and some great arcade action.

Previous RRP £ 25.95.

PANDORAS BOX

Now regarded as a classic, this game has an intriguing blend of puzzles and full blooded arcade action. 200 screens of stunning artwork and quality game-play.

Previous RRP £ 25.95.

The Real McCoy Vol 5 is on sale from November 1996 PRICE £ 34.95

4D hope to launch SIX new releases in 1996 and early 1997, including compilations, PC conversions and original titles.

RISC PC versions of all our most recent games are now available. We have an extensive range of BBC/ELECTRON games.

We will shortly be opening a new head office on the Isle of Man.

We are happy to negotiate discount for schools or home users, buying 2 or more games.

Birds of War £ 34.95

Stunt Racer 2000 £ 34.95

Virtual Golf £ 34.95

To order simply send us a letter, or give us a call, stating the software you would like, your computer model, your name & address and payment by cheque, postal order or Access/Visa. All prices include VAT & UK P&P is FREE. This advert shows only a small selection of our games. A free catalogue is available on request.

The Dungeonr £ 34.95

E-Type 2 £ 34.95

Time Machine £ 34.95

Unit 12, The Sidings, Hound Road, Netley Abbey, Southampton SO31 5QA

Beehug have been established since 1982 and are leaders in the Acorn Marketplace. We are extending our range of products and services and as a result have a position available in Acorn sales and support. We can offer a busy and stimulating environment working with young and professional teams. Beebug are a small company and there are opportunities to get involved in other interesting aspects such as RISC User magazine, software, hardware, and repair operations.

Technical Support/Sales Assistant
Our technical/sales team deals with a wide range of enquiries, providing

service on the phone, by letter, as well as in our showroom. We now have a vacancy for someone with a good knowledge of Acorn computers to join the team. This is a varied and interesting position and will also include opportunities to get involved in a wide range of other activities, such as representing BEEBUG al external events and shows, training to install and support networks, upgrading computers, testing new software products, and advising on the suitability of new products.

This is a an excellent opportunity for someone with an interest in computing and the desire to make it their profession. Applicants should possess an Acorn computer themselves and be very familiar with its use. Knowledge of DOS and Windows would be an advantage.

Salary to £12,000 depending upon age and experience.

Applications in writing (with a CV please), to: The Personnel Manager, BEEBUG Limited, 117 Hatfield Road, St. Albans, Herts. AL1 4JS

Gamma redirection

Author: Fred Williams

Fred has been tinkering with the palette on his RiscPC and has come up with a novel use for a longneglected feature of RISC OS 3.5...

"One of the new features of the RiscPC that seems to have been ignored for an awfully long time is the hardware gamma-correction. So what's that then? Well...

"The video circuitry gets a pixel's worth of screen data. It converts that into RGB values using the palette. Unless, of course, you're in a 16 or 24 bit mode, in which case, the pixel defines the colour. Then - and this is the important bit - it runs the R,G, and B values through three lookup tables to determine the brightness of the pixel ouput to the screen. And, joy of joys, RISC OS lets you play with these tables.

"The relevant call (see the Programmers' Reference Manual volume 5, or 5a if you've got it) is:

PaletteV (vector &23) Reason code (in R4) = 9

R0 points to a 256-byte "red" lookup tahle

R1 points to a 256-byte "green" lookup table

R2 points to a 256-byte "hlue" lookup table

"This returns R4=0 if the video drivers 'support' the function, in which case, your tables have been squirrelled away into system workspace. This, of course, begs the question: are there RiscPCs, or future Acorns in general, that don't support this? I don't know.

"To call this routine, you can use the "OS CallAVector" SWI, which takes in R9 the vector number (&23 in this case) and the other registers set for whichever vector you want to call.

"Now of course, you could be really boring, and actually use it for gamma correction (which hasically means biasing the tables towards 255 or 0 to make the picture brighter or darker). Or you could fade all the colours to hlack (or any other colour) and use it for switching smoothly between two images (which is what I was looking for when I found this call...)

"But why be dull? My program 'phases' the red, green, and blue tables independently of each other. The display is 'whatever happens to be on your desktop at the moment'. The great thing about using the gamma-correction is that it doesn't matter what 'depth' of screen mode you're in, but I can recommend switching to a 24-bit mode, loading up the 'fruit' IPEG (image 'sa09' on a RiscPC's hard drive), and then running the Gamma. Hit Escape when your eyes start to go funny..."

Bar code

Author: Andrew Kemp

You may have wondered why there wasn't any text to accompany Toggle which appeared on September's cover disc, well, it's here at last.

This little piece of code helps you unearth your icon bar from under a heap of windows using just the mouse. Andrew says "the idea for Toggle came from Guttorm Vik's excellent text editor, StrongED. I am a Zap user myself, and I thought this feature was too useful to live with-

As you will no doubt be aware, RISC OS provides a key to toggle the icon bar - Shifl F12 in fact. However, mouse addicts can simply install Toggle and click Menn with the mouse at the very bottom of the screen. The module works by intercepting the event vector, waiting for a snitable mouse click and then inserting a Shift F12 into the keyboard huffer. Note that hecause the raw mouse event is spotted, this works even if the icon bar is completely obscured by a window, although you may inadvertently hring up a menu in the process.

As an alternative, if you are a Director user. you might like to add the following item to the Close menu (in !Director.Menus.System):

Dash

Option "Iconbar" Command ProcessKeys ^F12

where ^ should in fact be a true up arrow (ALT 139). Now clicking Menn over any close icon will allow you to toggle the icon har in the same way.

Remember, remember...

Author: Keith Atkins & Scott Bonham

...the end of October. Well, yes, I know some of you may well be reading this well before Guy Fawkes night, but as this is the November issue, we feel duty bound to provide something in the way of pyrotechnics. In fact, we have not one but two little demos. The first is from Keith Atkins of Bishops Waltham.

It's basically one of those 'lots of sparks pouring out of a box' numbers. When it's finished its stuff, click Select for another burst or Adjust to quit. Holding down Select will provide a continuous stream of sparks. The demo can be tuned according to your machine's capabilities by changing some of the variables.

MAXSPARKS is the maximum number of simultaneous sparks (and tails) and can be increased with a corresponding reduction in speed. SPK_OCNT sets the length of a spark's tail and values other than 16 can give interesting, if not particularly useful results, !DELAY sets the time lag between stars and should be set to give a graceful display according to the speed of the machine. By default it is one which is suitable for the A3000 on which the program was written. !MAXBURST is the total number of stars in a burst.

Our second seasonal offering comes from Scott Boham of Romsey in Hants. This is more your 'starburst' affair. Again written in machine-code for speed, this demo also plots the progress of a load of stars (500 hy default) as they explode from a randomly chosen

point and fall under the influence of gravity. This program runs rather too quick on a RiscPC, so you can either increase the number of stars to something ridiculous (try 10000!) or add a few more WAITs lry copying the "OS_Byte" line a few times after MOV r0,#19.

On the rebound...

Author: Jamie Shotton

This is really just a much-enhanced version of Alistair Turnbull's little bouncing game from the September 1996 issue. !Rebound leatures custom game screens and two player games. It is a good example of the ultimate in one-key games.

To get a flavour of the game, try one of Jamie's example screens out (there are two supplied on the cover disc). Install *Rebound* in the usual way, Then drag *Maze* onto the *Rebound* icon. Now click on the icon with Select and choose Custom game. Select Start the Game and play.

The object is to guide your houncing dot to the safety of either the right side of the screen or (in the case of some custom screens like *The Maze*) to the purple area. Each player has only one key which acts as an upward thrust. For player 1 this is Space; for player 2 Enter. Otherwise, it is only gravity and the bonneing effect of the white walls that determine where your dot ends up.

Dark hlue areas will, when hit, unlock light blue ones – you will need to do this to finish *The Maze*. Yellow areas are fatal and should be avoided at all times. It is also fatal to fall off any side of the screen other than the right. Red areas, when encountered, will transport a player to a random position – so beware!

To change the number of players, select Players from the icon har menu. Player 1's dot is light blue and player 2's is green. To have another go at the same screen simply click on the Rebound icon with Adjust.

When playing a standard game you have the choice of three block styles and can choose the game number. This is effectively a random seed from which the pattern of blocks is determined – the same number always produces the same screen. Select Randomize to pick one at random. After a game you are able to view the high scores or enter your name amongst them if you have done particularly well.

To create your own custom screen, use the Custom submenu from the icon bar menn. (If you just select Custom it will show the currently loaded custom screen if there is one.) When creating a new game,

enter the name and that of the designed (i.e. you!) You can add a yellow border if required and blocks may be shown along the left side. When ready, select Edit to

enter the editor proper.

While editing, Select draws fat lines and Menn thin ones. Adjust finishes the editing process. A number of keys have effects during editing:

- W selects white (normal wall material)
- B black (for deleting)
- Y yellow (fatal to players)
- P purple (hit this to finish)
 1. locked (shown as light hlue)
- U unlock (shown as dark blue)
- T transport (shown as red)
- II hidden (shown as white in the game but which cannot be hit hy the player)

Insert shows yellow border and side blocks temporarily

Alt draws a rectangle in the current

Jamie uses his own file format for saved files and the screens are compressed. The compression process takes a few seconds. The game needs to be stored on a writable medium since it creates a hlank high score table, so copy it to your hard disc or another floppy before use.

Rebound was written in C on an A5000 and should work on all machines. It uses mode 27. Inside the *!Rebound* directory is a file called speed. Change the number in this file to control the game speed – the higher the number the slower the game.

Sci-fi hi-fi

Author: Graeme Jefferis

Time to dig out your copy of Flux and give this Digital Symphony track a spin. It is certainly one of the best and most different we have receivied. The creator of 60sSciFi says it sounds a bit like 'Lost in Space'.

Flux is the ideal tool for playing this track as with just a few presses of the space bar you can conjure up state-of-the-art early Dr Who-like special-effects to match the mood of the music.

Pretty lights

Author: David Llewellyn-Jones

"This is a graphic doodle" says David Llewellyn-Jones in a moment of understatement. In fact, this program continues our seasonal pyrotechnic theme in that if Monet had ever gone into the firework business, this is probably what he would have come up with.

David wrote *Lights* on a RiscPC fint says it should work on any machine which supports mode 28, albeit at a more sedate pace. Perhaps the most remarkable thing about this demo is that it is just 150 lines long.

The program is interactive in such a way that pressing and holding a monse button down has an 'explosive' effect – try it and see. You can also change the Lights icon in 'Sprites which double as the hrush used for plotting. Because of the way the program works, even colours should be used for the foreground and odd ones for the background. The hottom bit of each byte is effectively used as a mask. "It's difficult to explain the effect which altering the sprite has" says David. "It's best just to experiment."

Fork show & Julia - see sir?

Author: Alistair Turnbull

A pair of graphical masterpieces, the first goes under the rather enigmatic title CX(1:X)...

"This is a glorified bifurcation diagram, named after the formula that generates it. The glory consists of density dependent colouring and motion blur. I've redefined the mode 15 palette to make it smoother.

"When it appears to have stopped, it is actually moving gently up and down within a pixel, because this produces a pleasing sparkle."

We've rather lost count of how many fractal demos we've carried in these hallowed pages over the years. It takes a particularly fine programming talent to come up with something in the genre that's worthy of fresh column inches. In this case, Alistair has dramatically improved his earlier renderer of that most famous of sets, in the shape of *Julia2*.

"This is an ipdated version of the program you carried over a year ago (in Jime 1995 in fact). This time, it's written properly. I've managed to squeeze 12 iterations out of each recursive level, as opposed to six, and I've managed to increase the maximum number of iterations to infinity by detecting loops. It's about twice as fast, too.

"It should be possible to write a version that draws the Julia sets for different functions. In particular, I'd like to do the trigonometric and hyperbolic functions using Runge Kutta (as used in last month's *PoorJenny*). You may see this in the future." Well, watch this space...

DOSsing around

Author: Dr Tony Lindop

This is something of a reunion issue, as our next contributor was also featured back in June 1995 with Alistair Turnbull and Jamie Shotton. This time Tony provides a little help for those using PC cards or PC emulators. !DOSfsmap sets up a whole host of mappings from DOS filename extensions to Acorn filetypes.

"Run this application to generate a set of RISC OS sprites which correspond to DOS file extensions. DOS file extensions are mapped to RISC OS file types via the DOSMAP statements in the !Run file. These statements are in alphabetical order of the DOS file extensions. A set of Sprites have been included in the !Sprites file, which correspond to the RISC OS file types. The individual sprites are listed in descending numerical order.

"Sprites for filetypes &FFD to &405 have been extracted from the Acorn User CD-ROM and PD software. Sprites for file types &0FF to &0BD have been either generated hy hand or extracted from Windows Icons."

A list of all the extensions supported is provided on the disc as a text file list. This details the RISC OS filetype, those DOS extensions to which it corresponds and a brief description of the nature of the filetype. If space permits, an *Impression* version of the document will also be included. Tony would like to acknowledge R. J. Cohn (AU February 1996) for the original idea and list.

To compliment *DOSfsmaps* Tony has also supplied a pair of BIO modules. For those new to this magazine, *BIO* was a modular utility we carried many moons ago and to which we have added modules from time to time. In case you haven't got a copy, the cover disc includes a fresh one with Tony's two new modules.

The purpose of the modules is to convert PC icon files to Acorn sprites and vice versa. Simply drop the source file on the appropriate icon and after processing, save in the normal way. Tony used these BIO modules to generate some of the sprites used in DOSfsmaps.

A challenge

It's a while since we set you a programming challenge, so to get your well-rested brain cells whirring, here's a little programming exercise for you.

The challenge is to write a graphic ditty that uses only circles to do its stuff. By way of an example, you will find the elegant Shells by our own Mr Lawrence.

The delicate shell-like creations are simply produced by plotting a series of rings of

filled circles in fading hies. The program can run in 16, 256 or (on a RisePC) 32768 colour modes – just alter the value of cols at the start. If you think you can come up with a similarly impressive circle-based display,

Your demo can be In C, Basic, machine-code or whatever your like. And you can use whatever methods you like to do the plotting – you just musn't cheat, circles only – no lines, rectangles or sprites – not even circular ones.

send it in to us.

The indges (i.e. we) have the final say and will use our unfathomable expertise and discretion to select

the hest of your efforts for publication. Of course, originality will stand you in good stead. Please send your entries to us by November 30th 1996 and mark your envelope Circle Challenge please.

Send your programs, hints, tips and musical offerings to:

*INFO, Acorn User, IDG Media, Media House, Adlington Park, Macclesfield SK10 4NP

or, if your submission is 100K or less, e-mail us (including your real address please) at: austarinfo@idg.co.uk

You needn't include a letter but please put

your name, address and program title on every disc and include a text file containing your name, address, disc contents and program details. Any extras like saved screens, drawfiles and background information are a pleasure to receive. A SAE will ensure your discs are returned. *info submissions only please – if you are submitting material to another section of the magazine it will be processed more quickly if you send it separately.

Save up to £10 on the TALKING version of MATHSBOOK!

Sums can be hard work for some children. What you need is a way to get them done on the screen and Maths Book does just that. What they see looks just like an exercise book, right down to squared paper and 'teacher's red 'helpful comments'. Fully configurable from tens and units to thousands and decimals. MathsBook tracks progress, automatically moving learners up and down difficulty levels. It even keeps (and prints) records, so that you find out what they can really do. By Marshal Anderson, author of ScreenTurtle, and whose Music Box won the BETT '95 Award, For home and school.

Sounds simple

Mike Cook tidies up his sound system using an audio switching unit Some people are very tidy. A past head of our department used to say: 'The state of your desk reflects the state of your mind'. He said it once too often to someone who was about to retire. He replied; 'I suppose yours is empty!'

Now I have a certain clutter threshold, which is naturally higher than my wife's – once this is triggered, a mass tidy up ensues. The same thing has just happened with the sound system on my computer. It was all very well at first, but then I fitted a 16-bit sound upgrade and the sound was too loud, especially with the PC card. Then an internal CD drive was added and finally the FM radio I did for the September issue – samething had to be done.

That something arrived in the form of the TDA7318 chip I spotted in the latest Farnell catalogue. It was called a *Digitally Controlled Stereo Audio Processor* so I sent off for the data sheet to see exactly what it would do.

Basically it can take four stereo inputs, switch between them and control the volume bass and treble hefore squirting the signal to two pairs of speakers. The great beauty of this cbip, however, was that it is controlled by an I2C interface. This makes it ideal for controlling a permanent unit housed inside the computer as this interface is already built into the computer and we don't use any of the computer's precious interfacing lines.

A quick look at Figure 1 will show you the function of the chip. Remember, this is a stereo chip so there are, in effect, two of these systems inside the chip, for both left and right channels. After the input switching one of four gains may he selected, then the volume control cuts down the signal hefore passing it on to tone controls. Finally the signal is sent to two outputs – front and rear speakers. These outputs can also be cut

down allowing you to balance between left and right channels and also between front and rear speakers. This was primarily designed for a car system where you can push all the sound to the back passengers during particularly annoying tracks of 'The Lightning Seeds' album.

Now, gain is simply a ratio of the signals at the input against those at the output, but for audio purposes this can be misleading. This is because the ear works in a logarithmic fashion so that an increase of gain of, say, five, sounds different depending on bow loud it is to start with. If the sound is quiet it will be a hig jump but if it is loud you will hardly hear any increase at all. So to make things easier sound is often expressed in terms of Bells, which is simply the log to the hase 10 of the gain.

Well, it works out that a Bell is a bit big, giving numbers less than one for a gain representing a doubling of the sound, so we actually use units of one tenth of a Bell or a deci Bell. This is almost universally abbreviated to dB and pronounced 'dee hee'. So to express a gain in dBs all we need to do is to use: 10 Log (Gain). As this is power gain and we are normally dealing with voltage measurements another correction is made so that for most practical purposes we use: 20 Log (Gain).

Now the benefits for this are that it is very convenient to talk about gain in a way that is easy to understand. A doubling of the volume is simply an increase of 6dB no matter what the original level is. Therefore in a system like this we can get the overall gain by simply adding up the gain of each section as expressed in dBs.

A gain expressed as a negative number is a reduction or an attenuator and exactly cancels out positive gain. In this chip the gain just after the switch is positive and all the others are negative – bear this in mind when looking at the effects of each control.

Now it turns out that there is surprisingly little to add to make this chip work; the full circuit is shown in Figure II. The inputs are capacitively coupled and the capacitor between pins 6 and 7 couple between the switch gain output and the volume input. This is for the right channel with pins 16 and 17 doing the same job for the left one.

Pins 20 and 21 provide the bass filter and pin 5 the treble for the right side. Again these are complemented by pins for the left side. The two

Figure I: The functions of the TDA7318

pairs of outputs can he connected to the computer's internal amplifier through capacitors and the I2C interface signals are connected directly from the signals from the expansion back plane. The only slight snag is that this chip works off 9 volts not the usual 5, so we have to use a regulator to cut the computer's internal 12 volt supply down to the right value.

There could be a slight snag with construction – the chip comes in two types the TDA7318 and the TDA7318D, the difference heing the packaging. When I made this project I could only get hold of the TDA7318D which is the surface mounting version, therefore, I also got a conversion header on to which you can solder a surface mount chip and get a normal 0.1' spaced IC.

Unfortunately the chip is slightly wider than the licader and so I had to resort to bending the legs of the chip to make it fit, resulting in a very delicate soldering job. If you can, I would recommend you get the DIP (Dual Inline Package) version. I built the circuit on a small piece of veroboard hanging inside the computer. I arranged the connections so that the board came between the internal sound source and the internal amplifier using the front speaker output from the board.

There is only one speaker in my RiscPC 600 but when you use the external speaker socket you get stereo. I also brought out a socket for another pair of amplifier/speakers from the rear speakers output of the board. A word of warning here; the inside of the computer is sprayed with a conducting layer so don't rest the board on the inside plastic or some connections will short out.

So with construction over we have to write the software. This device has a fixed address of &88 on the 12C bus so we can only fit one on any bus. To control this device you simply write a byte to that address. The upper significant bits of that byte determine the function and the other bits give the data for that function – this is shown in Table 1.

For example if the two most significant hits are zero, the other bits determine the attenuation of the volume control in steps of -1.25 dB. As there are six bits this gives a maximum value of -78.75 dB which is very close to nothing coming out. The other controls work in a similar manner – note the audio switch which has both the input switch position and the input gain.

For this project the software is not quite straightforward although it could have been. I could have simply used a software control for each parameter but you can put a bit more intelligence into it to make it very useful – it's called lAndioSel on the cover disc. The tone controls are implemented as simple sliders and the volume as a rotary knoh.

Note the numbers on this knob represent the attenuation, but, because people expect to get a loud sound when the volume control is set to a big number, the numbers fed to the chip are inverted. This means that when you set the volume control to zero the chip is told to attenuate the signal by the maximum -78.75 dB, whereas a volume setting of 78.75 will produce zero attenuation.

It is in the speaker's attenuation where I have

gone to town with the software and it took some time to work out. Basically all the user has to do is to drag a square around a box.

However, this controls the sound position in two dimensions thus allowing you to fade hetween left and right and front and back at the same time. Clicking on the central speaker icon puts everything back to no attenuation. In addition, by clicking on each speaker you can mute

Figure II: The circuit of the Audio Switcher

them, which overrides any attenuation.

Finally 1 arranged the software so that all the settings would be remembered for each andio input selected and that those settings are stored every time the device is quit. You don't have to do anything to save the settings; the next time the application is opened you will get exactly the same results. The input labelling is done in the templates file and can be easily altered to suit your particular setup.

Now I wanted to be able to preset the audio on power up or when certain applications were run

like the PC card or the CD player. In order to do this I have written a second small application – !PresetAnd – to preset the controls. All you need to do is include an instruction to run this in the !Run file of you application. The settings are taken from a file called imaginatively 'Settings'. This can be obtained from inside the !AudioSel application once you have quit from it and can simply be dragged inside !PresetAud.

So now I have my sound system tided up and I have one rather unexpected honus. During the boot up sequence after a power on, the chip sets itself to zero volume so I have finally got rid of that intensely annoying beep – peace at last.

Table I: The register structure of the TDA7318

ne of the crucial differences between RISC OS and the other graphical user interfaces that exist lies in the way that file transfer is accomplished – we take saving and loading data from applications, or even between programs, very much for granted. In Acornland, all we have to do is drag an icon – if we want to save or load something to or from disc, we use the standard filer windows. RAM transfer is equally simple – just drag the file over another icon on the icon bar.

We're lucky. On certain other platforms I could mention, each application ends up with its own file interface, needing a hefty amount of code and producing a situation where no two file transfer dialogue boxes are the same. The approach that Acorn followed means that the programmer just has to provide one or two functions and the WIMP will do most of the hard work—your program doesn't need to know the difference between a floppy disc, an IDE drive or a magneto-optical device; all it has to do is write data to a filename that the WIMP provides.

This month, I've included the preliminary tools necessary for file saving in the example application – loading it from the cover disc, opening the Save window and dragging the icon will provide you with a dotted box that you can happily move around the screen. That's all it does for now, but we'll get on to the actual task of saving soon.

In order to make an icon draggable using the Acorn User library, you should first set its icon button type to be 'click

Steve Mumford discovers that programming the WIMP's a drag

and drag' (type 6). Whenever the user tries to perform a drag operation on the icon now, your task is passed the number of the mouse button used (Adjust is 1, Menu is 2 and Select is 4) multiplied by 16, to indicate the fact that the icon is being dragged.

You should then listen out for any Mouse_Click events occurring within Wimp_Poll that match the appropriate window handle and icon number - all you need to do then is call an_dragbox() with the appropriate values. Everything else is taken care of - AULib interrogates the icon and its window to discover the exact position of its bounding box on screen, then Wimp_DragBox is called to handle the familiar rotating dashed line. Here's the snippet of code from the example application that starts the procedure, all within the mouse_click() function:

```
if((au_bytetoword(poll_block,
12) == win_data[2].win_handle)
&& (clk == 4*16)) {
icon_num =
au_bytetoword(poll_block, 16);
if(icon_num == SAVE_ICON) {
au_dragbox(au_bytetoword(poll_block, 12), icon_num);
}
```

The first line checks that we're dealing

with the correct window, and the drag operation has been started with *Select*. After that, we grab the target icon's number from the poll block and check it to see whether it's our save icon. If it is, we perform a function to start the usual drag box, and return to our polling loop.

After that, all we do is sit and wait for a User_Drag_Box event (type 7) to be reported to us via Wimp_Poil - this indicates that the dragging operation has finished and all buttons on the mouse have been released. At this stage in the procedure of saving a file, we would call Wimp_GetPointerInfo to discover which window the pointer was over at the moment when the drag operation ended.

From there, we can send a message to the Filer using that information and supplying a file name, type and approximate size – this allows the Filer to check whether the operation is feasible. Once our application receives a **DataSaveAck** message, we can get down to the low-level process of writing the file. The message-passing procedure might seem a little convoluted, but it means that saving between applications can be handled very simply using the **WimpSScrap** directory.

Data loading follows the same general scheme, although we don't have to go to the trouble of drawing the drag hox, as someone else will be doing that for us again, we listen for User_Drag_Box and check to see whether the file was dropped on our icon bar icon. I'll fill in the code necessary for these functions next month.

Rambles through

Another selection of problems and solutions from Mike Cook

ood news this month about my saga over my quad speed CD drive 1 bought from Yellowstone – it's finally working at quad speed. I received the correct driving software days after last month's copy was due in. I can now transfer a 10M file into RAM FS in 18 seconds, giving a speed of 555 K/second which is close enough to the theoretical speed of 600 K/second.

I've been experimenting this month with a digital signal processor starter kit from Texas Instruments. This is a neat little board with a processor, memory and 14-bit digital input/output, all for under £100. It uses the TMS320C5 processor and needs the PC card to run it. Digital signal processor or DSP chips are specifically designed to support the sorts of operations you need in digital filters and communications circuits. For example, you have registers that work in circular buffers and multiply and divide instructions.

It works, or should I say nearly works, on the PC card because it suffers from the occasional crash and the test programs sometimes report a fault with the serial communications. Now in my experience this is not uncommon with hardware designed to attach to the serial port. As well as my own experiences of this DSP board and a logic control programmer I have had reports of problems from two readers about radio communications interfaces.

From my investigations I think I know why this happens. PC software controlling hardware expects to be able to access the serial port and its data registers in a specific amount of time. Now while the PC card has a real processor on it, the RISC computer still has to emulate a normal PC's hardware. This is much slower than having the correct hardware and is known as the latency time.

While this is reasonably short for the serial data registers, it is comparatively long for the status registers. Hence a software program that uses the handshaking lines for data transfer or relies upon seeing how long a byte takes to turn around will think there is no hardware present. This can sometimes be solved by running at a lower band rate but this is not always possible.

Therefore please use extreme caution when thinking about using the PC card with hardware; you could waste a lot of money. Your safest bet is to specify that you want a product to work with an Acorn Risc PC 486 card configuration when you order it, then you have a chance of some comeback. A final thought is that the

StrongARM chip might he so fast as to remove this problem – 'it's a slim chance Jim, but it might just work'.

Acorn Wood

Now I don't know if yon bny lottery tickets, I certainly don't for many reasons, one of them being that the odds are way out. I have never benefited from any lottery funded projects but I might just. It has recently heen announced that there is to be lottery funding for a British Millennium Satellite to be put into low Earth orbit.

The idea is that it will provide an educational resource for schools and other interested parties. It will transmit data and images as well as the results of on hoard experiments. It is planned that the images could be taken over any part of the Earth and stored for transmission when the satellite passes overhead. My interest of course will be in designing interface equipment for Acorn computers so we can share in the information.

A similar satellite was put up by the University of Surrey about 15 years ago but there was no funding for continued operations and the project eventually fizzled out. This is a trap the current project hopes to avoid. As yet the satellite hasn't even got a name and the organisers are still asking schools to suhmit an experiment idea to be built professionally. Launch is planned for 1999 and if you are interested contact: Millennium Satellite Centre Ltd., c/o Royal Grammar School, PO Box 289, Guildford GUI 3WY.

Sorry if you have tried to access my web site over the summer but the file server crashed and we lost everything. What is worse they changed the name so even when it got hack up people were having difficulty getting it. You are best going through the alias of http://physics.mmu.ac.uk/Physics/Acorn and just a reminder that the capital letters are important.

On to the problems this month, Barney Livingston from Southampton writes:

I have a Star 'Concept Keyboard' for use with my BBC and which I would like to connect to my Risc PC in order to assist my mentally-handicapped sister. This could possibly be achieved through the printer port. The Concept Keyboard also has a 25-way D-type plug and the connections look quite similar to the printer port, so it should be quite simple. It is an

A4 keyboard which has 128 touch pads arranged in a 16 by 8 grid.

I can program in BASIC, so I should be able to write any software myself, but I have lost the May 1995 issue of *Acorn User* which contained your article on programming the parallel port.

Barney also sent me a copy of the keyboards pinont, it looks like there should be no problems. However, the May 1995 issue is not the one you want to look at – rather you want to see the Feb 96 issue. I know this was for a digital voltmeter but please bear with me – I am assuming here that this works like a normal scanning matrix keyboard and that the values on the data outputs are constantly changing until a pad is touched. They will then freeze at that pads code and produce a strohe output.

What you need to do is to make up a wire to connect the data bits in your computer to that on you keypad; you will find the computer's pinout in the Welcome Guide. Next wire up the negative strobe on the keypad to the acknowledge line pin 10 of the computer and the system ground to pin 25 of the computer.

Next you have to power your keypad with 5 volts. This was available on the old BBC hut not on the new machines. You can tap this voltage from inside the computer or get a separate supply. From the pinout I was sent, this goes to pin 25 of the keyboard. A point to note here: If the two connectors are the same you have to be careful not to get them the wrong way round, therefore you should label each end of the lead. Now you want the software to recognise the strobe as a signal to latched in data. This is where the DVM software comes in; it used the same technique. You should open a file which specifies the parallel port is used to be read by the line:

F%=OPENIN"parallel:"
SYS"Parallel_Op",2,&20,&DF

After that you can use the BGET command to extract bytes from the keyboard. You can then interpret them how you like.

Barney also has a supplemental:

I want to upgrade my Risc OS 3.5 Risc PC's hard disc to 1GB. I have a limited budget and an IDE CD-ROM drive, so I can only upgrade my current hard disc. I

cannot aflord a SCSI card, so I have decided to opt for splitting it into two 512Mb partitions. I have been told that I can do this with the software provided with the computer (possibly !HForm). I would very much like to know if this is possible and if so, how?

As far as I know you can't generate a partition on an IDE drive. The Rapid IDE card from Yellowstone will allow you to do this, as will OS 3.6. I suspect that OS 3.7 will also allow this and it will probably he available by the time you read this.

Mr Barnet has a suggestion for an article:

I saw "It'll Never Work" and on it was an invention which I thought might interest you. Basically it was a device which measured the electrical activity of the brain via a headband. It then found the intensities of the brain's alpha, beta and gamma waves which it used for control purposes.

One example of its use was when they showed a screen containing two boxes labelled 'Switch 1' and 'Switch 2', and Jez Nelson managed to move a pointer over one of the boxes and click on it thus turning a light on and then off. It appears that the intensity of the alpha wave determined the x-coordinate, that of the beta wave the y and the gamma wave caused a click when it reached a threshold. How about trying this for an article?

This one brings back painful memories of 1972 when I constructed a very similar machine – the popular name for this was hio feedback. The idea was that I could use the hrain waves and heart beats to generate music hy feeding them into an arrangement of sample and hold circuits, voltage controlled oscillators and voltage controlled amplifiers.

The front panel was a huge patch bay where I could interconnect the amplifiers and oscillators. However, I found it impossible to detect any brain activity at all—some might say this is no surprise. The voltages I was picking up were due to minute muscle movement but there is worse to come. In order to get a good connection I had covered my electrodes in a conducting gel ohtained from a nurse at the local hospital. Being a lone experimenter I was working on the circuit while wired up to this.

I found out the hard way – if I touched the output of the amplifier which was only carrying a few volts, this would get picked up by the electrodes on my body and cause a feedback circuit, which placed 15 volts across the head electrodes resulting in severe pain. The second time this happened I abandoned the project and I have never been keen to try this again. There is a cardiac monitor experiment on one of the instrumental courses I take and my students have great difficulty building

an amplifier that will pick up voltages from the heart. Again muscle movements are a problem – you have to breathe. So therefore, if you don't mind I'll pass on that one.

Philip Ludlam from Bracknell wants to know about the serial transfer. He writes:

My question concerns my BBC Master. I would like to transfer data/programs between that and another BBC B via the R5 423 interface. However I have run into a few problems. The two machines will not communicate, even on 75 baud. The Master appears to send information (after the first 255 characters have gone into the buffer the transfer slows down to about 1 per second when at 75 baud), but the BBC sends the first 255 characters and then halts.

I have checked the lead and it is fine – the connections match and I have managed to transfer data hetween two BBC Bs, but not between the second B and the Master. I think there's a problem at the Master's end – is it something the do with the *FX calls or configuration? How easily can I transfer liles between a A3010 and a PC via the serial link? Is it just a lead or do the two machines use different Interfaces? What type of lead/interface would I need?

Communicating through the serial port should be simple, but sadly many times it is not. With only a few wires to play with it is surprising how often it can go wrong. There is nothing much different about the Master than the Model B so it has to be the lead. This applies even to the more modern machines. If a huffer fills up and then freezes, the CTS handshaking line is at the wrong state. This should be wired to the RTS line of the other machine.

Remember on these old machines, just to complicate things, you could plug the serial lead in two ways. The best way to set ahout serial communications is to just wire up the data lines, data in on one machine to data out on the other. Next, make sure the baud rates are the same on each machine by using *FX7,4 and *FX8,4, and finally, make the word format match to 8 data 2 stop by using *FX156,&F3,&E3. Then issue a *FX3,I on the sending machine and *FX2,2 on the receiving machine and then on type the sending machine until it freezes. Then you can see which handshaking wire you need to connect to what, as when you get it right the computer unfreezes. Then by typing *FX2,1 on the receiving machine you should he ahle to get one machine controlled by the other.

The same techniques can apply when using a PC but remember the PC doesn't have any useful *FX commands. The simplest way is to get hold of some simple communications software and use that, as

the interface is the same on both machines.

Philip also has two supplementals:

On another note how can I get hold of a leads (from an A3010) and drivers for an Olivetti PC Printer tJP 250) and an Epson LX-850? Secondly, I am going to purchase an A3010 (my first Archimedes). Please explain to me the differences in monitors, as I can only relate to the resolution and maximum number of colours. I am completely baffled by jargon such as AKF 50/53/60/B5/95. What are Multi-5ync monitors? What is 0.28dp? Is it the same as .2B dot? How about .26 and .25 dot? What's the difference between AKF monitors, Microvitec and Iivama? What effect does 14in, 15in and 17in have on the display?

For leads and drivers contact your local dealer or phone around any of the hardware suppliers who advertise in this magazine. As to monitors, it's fairly straightforward when you strip away the jargon. Originally monitors worked on the same standard as a TV set. That is, it took about 64 uS for the spot to travel left to right and 25 mS to travel top to hottom. The monitor was synchronised to the computer using pulse called sync pulses. This standard fixes the number of lines in the Y direction you can have.

There are two things wrong with this when it comes to modern computers. First there are not enough lines for the resolution you want and secondly it's not fast enough to avoid flicker as you are normally viewing a monitor from much closer than a TV set. To address this, computers were made that produced sync pulses at different rates and so the monitor had to be capable of latching onto these pulses hence the name multi sync monitors.

The numbers after the AKF indicate what refresh rate the monitor can use. That is how many times a second the monitor redraws the display. The old TV system had a new screen 50 times a second, from the numbers quoted the monitor can also refresh at up to 95 times a second. The dp (dot pitch) and dot specification mean exactly the same thing, how far the phosphor dots on the screen are apart in min. The smaller this number the higher resolution you can get on the screen and the crisper it will appear.

As to a 14in display, this is (or should be) the size of the diagonal of the screen; the higger the number the bigger the picture you will see. This has a knock on effect on the resolution you can see with the same size dot pitch, the bigger the screen the more pixels you can clearly display. Finally AKF is simply the model numbers given by one manufacturer and the other names are other manufacturers.

Subscribe now to claim your free gift or special offer from CORNUSER

the world's number 1 Acorn magazine

You already know what a great magazine ACORN USER is. After all, we've been the main source of information for all Acorn enthusiasts for the past 13 vears.

What you might not know is that by taking out a subscription today, not only are you guaranteed never to miss an issue of the biggest and best Acorn magazine in the world, but you can also claim an excellent free gift or special offer, available exclusively to all new ACORN USER subscribers.

As an Acorn User subscriber you'll benefit from:

- Free delivery, every issue, direct to your home
- One of our amazing free gifts or special offers

Exclusive to Acorn User this binder will hold up to 13 issues of your favourite magazine. PLUS receive an extra two magazines absolutely FREE!

EASYFONT 3

Gives flexible control over your fonts; WYSIWYG display window; up to 40% space saving on your hard drive; specifically designed Font Filing System giving maximum power and flexibility; the ability to create countless new styles quickly and easily; and the elimination of the dreaded 'Font not found ' errors.

SUBSCRIBING HAS NEVER BEEN EASIER

Why not make your subscription even easier and subscribe by direct DIRECT debit, spreading the cost of your subscription over quarterly hassle-

free payments. What's more, you need never worry about missing an issue again, as the subscription continues until you decide to cancel.

FIGHTER 3000 **SAVE £29.95**

Winner of our reader's Best Game award. An original and thrilling space game from Fednet.

PUBLISH ART SAVE £25.00

The ultimate DTP resource - 1500 original designs, a massive 13Mb of eye catching resources for perfect DTP

Re: Bare boards please (June 1996)

In (a slightly late!) response to Christophe Ponet's letter in the June 1996 edition of Acorn User, it is indeed possible to huy 'spares' from Acorn – it always has been.

I have a list in front of mer case mouldings, springs, hinges, floppy drives, packaging(!), gaskets, switches, motherboards, processor cards and sometimes you can even buy the RISC OS ROMs (3.50 chips are about £10 each - 1 don't know about others).

It is Acorn Computers who deal with such orders. If you have a credit account (i.e. are a dealer) you can order direct. Enthusiasts must order through their dealer.

If Mr Pouet is looking for

RISC OS 3.6, many folk will have such chips for sale in September when they fit 3.7 chips and their StrongARMs.

Richard Walker, Stockton-on-Tees

Re: Proper decimal points

I have only just read your June 1996 issue letters page and having made some use of the Alt+keypad combination of late to put symbols into engineering drawings, I was interested to read the letter from D A Cox. I recently bought Oration Pro, and I can

DIY CD-ROM drive

I'm sure that many of your readers must have old external 5.25in disc drives left over from their old Beeb days, which probably haven't heen used since they transferred files over to their new Archimedes. Here's what I've done with mine:

For some time, I'd wanted to have a CD-ROM drive, but was put off by the high prices quoted by Acorn dealers. I then saw that many PC suppliers were selling Hitachi CDR-7730 IDE Quad

assure Mr. Cox that the facility is already there to redefine the decimal tab as ASCI1 183.

Having experimented with the decimal tab for a few minutes it looks as though Ovation Pro will, by default, recognise both the full stop and the decimal point (183). An unexpected feature of the decimal tah is that when typing in letters these are entered to the left of the tah and the point does not stop this action but the full stop does.

For all those eager to use sexed quotes and proper decimal points, do rush out and buy *Ovation Pro.* It is the sort of software to make you proud to own an Acorn machine.

David Lewin, DavidLewin@aol.com speed bare drives for as little as £35 + VAT. I hought one of these, removed the 5.25in disc drive from its case, and fitted the CD-ROM drive in its place. All of the fixing screw holes lined up, and even the power connector was the same.

The next step was to get an interface from Pyramid Computer Services for £28 + VAT, connect everything together, and it worked! A CD-ROM drive and interface for a total outlay of £109.28, which is a huge saving compared with dealer prices for external CD-ROM drives.

1 hope this is of benefit to your readers.

Mark Wiggin, Newport, Shropshire

Branching out

I am a recent convert to the computer world and I started with the Risc PC 600 (against my son's advice), mainly hecause of the promised PC capability. This has partly been fulfilled but with a few 'features' I hope will be ironed out mainly to do with the serial ports.

My reason for writing is that I find it hard to get coherent information about upgrades available. Both on the hardware route and the software connected with the upgrades. are available according to need.

Mainly because of the queue and time available I did not join the Clan at the first Wemhley show after the PC 600 launch. This was a mistake as far as getting information is concerned. For some reason the dealer 1 bought the machine from did not seem to get any information. (They went in the night of the long knives.) I then, via Acorn, was directed to another dealer who, like the first, was extremely pleasant but I think geared totally to the

been. I have a system called Modemaster that runs under DOS to decode weather, faxes etc. It depends on a decoder fed from a communications receiver into the serial port. Mike made great efforts to find out more about it, but, in spite of his contacts and very wide experience - I find his range of articles most impressive has not been completely able to explain the problem. Probably my lack of understanding of the explanation.

It is rather galling as the system will work well on a very old Compaq, literally

Windows on PCem?

It said on the Octoher 1996 letters page that Windows 3.11 will run on the *!PCEm* software. I have the MS-DOS 6.22 and Windows 3.1 discs and successfully installed MS-DOS 6.22 which is working fine. I am having problems with installing Windows 3.1 though. I get the message 'Undefined opcode error – system halted'.

When I type:

a: setup.exe

I get the message 'Program too hig to fit in memory'. The same happens when I do this from Windows 3.0. Are you sure Windows 3.1/3.11 can be run on an A5000 with 4Mb of RAM.

> Simon Wilson, 101702.1034@ copaserve.com

While It's difficult
to spot all the
things that can be
wrong — PCs being
flakey at best and the
old IPCem is not the stablest of programs — but I
would say the problem here
is that you haven't allocated enough memory for
the conflator itself.

How do you run Windows in the PC Emulator? On my system all 1 get is 'Windows requires an 286 or higher'.

> Alisdair McDiarmid, a.mcdiarmid @zetnet.co.uk

The !PCem software emulates an "80186" processor — not that there really was any such beastie — which is why it doesn't like it. I believe you may have rather an old version there and upgrading to a later emulator version might help. Beyond that you'll just have to bny a PC card.

For example, I have tried hard to find out what and how one can use the seven 'slices' of capacity advertised as available with the hasic machine, I asked five people at the Acorn stand at Weinbley and none could tell me. Obviously I got the wrong people but I can find nothing in the literature I can get. Even more with the RISC OS software developments, the PC card advances and processors up to StrongARM.

I feel sure that there would be interest in an article that drew a tree with the PC 600 as the base and branched out showing the different routes for upgrades for the Risc PC series that

school market and not interested in anyone who wants to dive a little deeper. I have since joined the Clan and get more information, but there are huge gaps in my knowledge about the progress from the PC600 to 700 and now the StrongARM processor.

I freely admit that if I had been more experienced I might have been able to follow events in the magazines but even going back through the journals I have, I cannot lind a coherent pattern in references to upgrading. Acorn themselves have nothing in handbooks that I cau get out of them.

I would like to mention how helpful Mike Cook has saved from a dustbin. While my expensive PC600 sits helpless.

John S Bennett, Boston, Lincolnshire

I think the upgrade problem is that there is no upgrade path, even with processors — apart from get the latest. The seven Risc PC slices can be filled with whatever you find to fill them with, be it additional hard disc drives, CD-Rom drives or computer-controlled toaster. If yon don't know what you want to put into the additional slices then you probably don't need them, 99.99 per cent of people don't get beyond two slices.

The

It is very easy to write something which has lots of features but is a curse to use, or something which does nothing but

is easy

When George Buchanan – the force behind Dalriada Data Technologies – was doing his sandwich year at college, he worked at a seat helt manufacturer. It was July and the plant was nearly shut down as everyone was off on holiday.

Then the phone call came – a manufacturing plant in Europe wanted to know when its next consignment of seat helts was arriving. No one had thought to tell them that the factory effectively shuts down for three weeks in the summer; the European plant was looking straight at three weeks of no work as a result.

George tried to get hold of the hosses, and the personnel manager, but they were all on holiday. Thankfully, he used his initiative:

'Fortunately I knew the personnel system on the computer – because I wrote it. I managed to get the employee list and get in enough people to run one line, and a foreman. It was funny because I had to phone people up and tell them that I didn't know how much they were going to get paid but that I would do my best for them. We did produce enough to tide them over. Imagine it – there was this lad on 7.5k a year running a plant which costs 1.5 million pounds a day to run.'

In other words, George improvises well.

George originally wanted to be a historian, but this changed overnight when he fell upon a book called *Number Predictions and War*. This explains that you can predict the outcome of hattles based on historical information, and lots of number crunching.

'I played around on my father's machine, figuring out how to list the programs which were written in BASIC, and from that I learned to program. I changed from a completely arty history student to a rabid mathmo. At school I wrote programs for the BBC which they needed for administration; I was lucky hecause my teacher encouraged us to write proper programs, not the usual 10 HELLO WORLD, 20 GOTO 10.'

Proper programs indeed; by the age of 16 he was writing costing systems for Northern Ireland's largest chain of supermarkets, working for printers and doing security systems for banks

like Ulster Bank: 'These were nice little earners on the side'. Then came Dalriada.

'At the time people were into naming their companies after Greek and Roman gods and goddesses, so I thought: "Forget that, let's go for a Celtic one," hence Dalriada. Dalriada was in fact an Irish/Scottish kingdom which was supposed to exist from the 4th century AD to 1200 AD'.

'I think you will find that a lot of other companies who set up in the Acorn market the same time as us have gone. This is mainly because they chose to do something which had already been done. TableMate was horn because I had been using Impression a lot and hasically Impression's tahling was a nightmare. GraphMate does have competitors, so it was of utmost importance that we did it differently from other people. The days of re-selling a word processor for the 20th time are over.'

'My philosophy is that just because a program might be used by a 10-year-old who does not want to worry about a GIF file, does not mean you have to compromise professionalism. If you think of a graph, the Y axis is how many things you can do and the X axis is how hard it is to use. It is very easy to write something which has lots of features but is a curse to use, or something which does nothing but is easy. There is a straight line between the two axis and you should curve that out and so get as much as possible for very little work.

'I think the industry as a whole is at a crossroads, and what I do wish is that more Acorn users realised that the changes going on the Acorn world are similar to those in the PC world. Development of all the major programs has slowed down. What we have to do is plough our own furrows, not be a poor-man's PC.

'There is going to be an Acorn future: it won't be the same as the past. The changes which are going on – the formation of ART and Xemplar – are making RISC OS like more of a building block.'

In a changing Acorn market, improvising to cope with changed circumstances is an important skill, and George does it better than most.

Total Data Security & Harddisc Backup

The removable harddrive system lits into a 51/4" drive slot in the RiscPC and harddrives are available in many sizes which can simply plug in and out of the slot as required. The drive may be locked in place to prevent unauthorized removal. For total security the drive may be removed and stored in a safe place to prevent

unauthorized access to your data. Because the removable drives are available in any size (up to at least 4Gb) they are also ideal for use as backups for existing harddrives. and may be easily transported between different computers for rapid transfer of large datafiles. The system is available for use with both IDE and SCSI filing systems. External boxes are available to enable SCSI removable drives to be used with older Acorn models. Please 'phone for details, See opposite for prices.

PAL TV Coders

The PLC/3 PALTV Coder works in any of the 'Standard' Modes, e.g. mode12 and 15 on all Acorn computer models, The PLC/3 has a 15 pin RGB output for the monitor, a BNC for video and an S-VHS connector for S-Video. The PLC/3 will work with PLC/3 £104.57 RiscPC computers although the AKF60, AKF85 and AKF90 will not work at the same time.

The AVK/3 will work with all computer models in all screen modes up to 800 x 600 resolution in 16 million colours, It has a remote control with l'acilities for zooming, freezing & panning the TV picture. Ideal for lectures and demonstrations etc. The AVK/3 includes all connecting cables including a SCART which gives TV frequency RGB O/P for large screen TV's, a phono socket for composite video and an S-VHS socket for S-Video.

ArtWorks Video Tutorial

A Brand new product from Pineapple is this VHS Video Tutorial covering the use of ArtWorks,

Walter Briggs is the tator for this I hour video which shows how to use all the ArtWorks tools and then goes on to show how Walter produced his famous Tiger head picture. Walter also draws an impressive landscape picture which can be copied by those with no artistic talent at

ArtWorks Video Tutorial £19.99

24 Bit Colour Scanners Pineapple can offer a wide range of Flatbed A4 colour scanners starting from as low as £359 including software and VAT!

The Epson range is currently the most popular allhough Canon are expected to release a new scanner to replace their IX-4015 shortly. The cheapest in the Epson range is the GT5000 with an optical resolution of 300dpi. This is adequate for virtually all home use. The GT5000 is available with either a parallel or a SCSI interface, The GT8500 has an optical resolution of 400dpi and cornes with both parallel and SCSI. an optical resolution of 400dpi and comes with both parallel and SCSI interfaces. Finally, the GT9000 is the top of the range with an optical resolution of 800dpi and both parallel and SCSI interfaces. Imagemaster and Twain software are included in the price, but we also offer our Studio24Pro Photo re-louching software at just £80.00 inc vat with every scanner purchase.

20 : 20 Finance available on all RiscPC's Studio24Pro at just £49.00 with any RiscPC purchase Studio24Pro at just £80.00 with any colour scanner FREE membership of the Virus Protection Scheme with any RiscPC

A Eight speed CDRom drive for just £75 with any RiscPC

There are two ways to get on the Internet: Manual Automatic COMPUTER DICTIONARY

TCP/IP, PPP, SLIP, SMTP, POP2, POP3, IMAP, MIME, UUencode, FTP, HTTP, HTML 3.2, NNTP, GIF, JPEG, Telnet, Gopher and more.

If the Internet is a superhighway, the directions can be pretty confusing.

When you use the ANT Internet Suite Release II, you don't need to worry about all the technical jargon. Our software takes care of setup and configuration. All that most users need do is put our disc in the floppy drive, type in name and serial number, and choose their Internet provider and access point from pop up lists.

The new version includes some of the most powerful and up-to-date Internet software available for Acorn computers such as our Web browser Fresco® (also used in Network Computers), so you won't be left in the slow lane as new Internet technologies emerge.

So you can sit back and enjoy the ride. And if you do experience any difficulties, our dedicated customer support team won't leave you stranded on the roadside.

For further details, get motoring and contact ANT at PO Box 300, Cambridge, CB1 2EG, or visit our Web site at http://www.ant.co.uk

The ANT Internet Suite is £99 + VAT. If you use another commercial Internet product for RISC OS we'd like you to try the Suite for £49 (inclusive) plus proof of ownership. Upgrades from release I are £10 (inclusive).
