BRIDGING THE GAP...

BBC
Microcomputer
Compatible
Disk Drives

Now
Available
From:
Spectrum

An example of superior technology, total reliability and outstanding performance, combine to produce the LVL 200K dual disk drive.

A truly professional unit designed to fill the gap between the Acorn 100K and 800K disk drives.

- Also available in a 100K single drive format.
- Powered from your BBC model B computer
No chance of data corruption from on-board power supply.
- Compatible with the BBC single drive unit
Disks are interchangeable with those formatted on the BBC 100K Drive
- Operates either from the BBC DOS (available with the unit) or from our optional Z80 card CP/M
- Supplied complete with all necessary connecting leads, utility disk and full operating manual.
- Available from all LVL Dealers.

To: Leasalink Viewdata Ltd Scientific House, Bridge Street, Sandiacre, Nottingham NG10 5BA

Please send me Name and address of my nearest LVL dealer.

Special offer to readers on binders

THESE quality binders have been specially commissioned for readers from a major British manufacturer. They are available exclusively through *Acorn User* at an introductory price of £3.95 which includes postage and packing.

So, keep a year's worth of your favourite magazine in prime condition, send for one of these maroon, simulated leather binders. *Acorn User* is printed in gold on the front and spine of each.

Make your cheque payable to Addison-Wesley Publishers Ltd, and send it to BKT (Subscriptions), Douglas Road, Tonbridge, Kent TN9 2TS.

Include your name and address or use the form on page 81. Allow four weeks for delivery. With overseas orders, add £2 for Europe (total £5.95) and £5 for the rest of the world (total £8.95, airmail).

How to submit articles: You are welcome to send articles to the Editor of *Acorn User* for publication. *Acorn User* cannot undertake to return them unless a stamped addressed envelope is enclosed. Articles should be typed or computer written with double line spacing. Black and white photographs or transparencies are also appreciated. If submitting programs a cassette or disc is vital. Payment is £50 per page or pro rata. Please indicate if you have submitted your article elsewhere. Send articles, reviews and information to: The Editor, *Acorn User*, 53 Bedford Square, London WC1B 3DZ.

**Authors please note**

We've been inundated with articles for publication – many of an extremely high standard. It takes time to read them, try listings out and edit them – which is the only way to maintain standards. Also please remember that magazines work at least two months in advance.

So please bear with us if you hear nothing for weeks (although all submissions are acknowledged).

Thanks for your patience and apologies for any frustration caused.

Beeb set for Atlantic crossing

ACORN expects its 'souped-up' BBC micro to pass US emission and safety standards this summer, in time for a Christmas launch.

The US version will include Acornsoft's View word-processing ROM, speech synthesis, disc and Econet interfaces - and a new operating system to cope with differences in the TV display. It is expected to sell for \$995.

Software is being prepared to accompany the launch, and the company is seeking programs to market. Talks with the major computer chains have stalled until the micro passes the regulations and is available for evaluation.

The first BBC TV series has been shown on America's Public Broadcasting System since April, and full-page adverts have appeared in magazines (mostly financed by Acorn).

Plans are being laid to export as much of the BBC system as makes sense, which includes second processors and the teletext adapter - although the latter depends on a Ceefax-type system being established. Talks are underway with American TV stations to look into this.

Equipment will be made in Britain, but the BBC will undoubtedly commission disc drives in the US (the present ones are either Italian or Japanese in British boxes).

The disc filing system

will, said a spokesman, be identical to that in the British machines.

Coping with US televisions has the major problem. Although the 'spot' flies at virtually the same screen across the screen, there are only 525 lines, as against 625 on British TVs. This means the number of vertical pixels is reduced from 1280 to 1024, although the number is constant (800) in the horizontal direction.

The table shows the number of text lines per screen page for the two systems in each mode (software writers please note).

Machine code programs and all the plot commands are changed for the US. The alterations to the operating system have been made to cope with these problems, although present software written in machine code will not make sense to the new machine.

Availability of the Z80 second processor will be a big factor in the US, as a vast amount of software is CP/M-based. Initial reaction to the BBC micro in the US computer press has been good (although the DFS has

A NEW BBC SERIES PREMIERING ON PBS APRIL 16
Check local listings for exact times and dates.

THE COMPUTER PROGRAMME

In clear and understandable language, this series explains what computers are, how they work, and in what ways they are affecting people's lives.

Each of the 10 half-hour programs, highlights from which are shown below, addresses a different issue of concept and provides practical answers to basic questions about computers.

1. The Shopping Man
Just what is the basic capability of a computer? This episode is the answer to the question: 'What can a computer do?'

2. One Thing After Another
This episode deals with a computer program that may do a lot of things, but only one at a time.

3. Talking To A Machine
Computers 'speak' their own language. This episode shows how computers 'speak' and how we can talk to them.

4. It's On The Computer
How do computer stores and software stores differ? This episode explains the difference between the two.

5. The New Media
The program looks at how computers are used in education, business, and entertainment.

6. Sound and Meaning: The Joke
Computers 'speak' and 'hear' as well as 'see'. This episode explains how computers 'speak' and 'hear'.

7. Lorry Problem
Computers 'speak' and 'hear' as well as 'see'. This episode explains how computers 'speak' and 'hear'.

8. The Thinking Machine
Do computers make a choice? This episode explains how computers 'think' and 'decide'.

9. In Control
The program presents the world of the computer. This episode explains how computers 'control' and 'manage'.

10. Things To Come
What is the future of the computer? This episode explains how computers 'evolve' and 'change'.

THE COMPUTER PROGRAMME series is available in 16mm film and videocassette formats and may be loaned by mail to schools, libraries and clubs. For more information, write to: BBC, PO Box 1, LONDON W1A 0AA. (UK) or BBC, PO Box 1, NEW YORK, NY 10108. (US)

Presented by the Computer Group of the BBC. Produced by the BBC. Copyright © 1985 BBC. All rights reserved.

ACORN COMPUTER

BBC TV series and advertising spread the Acorn name met with adverse comment because of the limit on 31 files). Noise emission has been a major hurdle for the BBC micro because of its processing speed. The FCC (America's Home Office) is tight on this point, and the machine's case is likely to be foil lined (as are most US micros).

The second factor is safety, covering flammability and electric shock. The States is particularly hot on fire standards because of bad experience with exploding TVs in the 1950s.

The end of the BBC micro as we know it

SOFTWARE and book publishers may be prevented from exporting BBC micro products to some parts of the world.

The Swiss engineering giant Brown Boveri Cie has already forced the BBC to write its name out in full on the micro and has had words with BBC Publications.

Now BBC Publications

has warned book publishers of the possibility that Brown Boveri may prevent the name BBC being used on books bound for Europe.

The Swiss company is a household name in Europe and Africa and has registered the name BBC micro.

Auntie and her name-sake appear to have

agreed not to use the initials in each other's territory. The BBC has first refusal in Britain and probably the Commonwealth. The position in the US is unclear.

The BBC has already clamped down on unofficial use of its name this year, and now appears to be on the receiving end.

Trolley clamp

THE BBC has given its mark of approval to a security clamp and trolley.

With the clamp, a BBC micro is glued to a metal frame which is then locked into a second frame fixed to a desk or trolley. It costs £30 and is made by Selmor Engineering, which also provides 'official' trolleys and monitor shelves. Tel: 01-247 3344.

Zany balloon prize time

REMEMBER GRIN? Well it's zany caption time again. Our picture shows Maggie clone Alison McGuire at the recent launch of Virgin's software.

The hand holding the 'water' belongs to record superno Richard Branson, who looked set to christen the confetti-covered 'first lady'.

Your job is to think up a 'balloon' for the picture. Entries on a postcard to our usual address. Don't know what the prize will be, but our winners never go short.

Second microfloppy uses standard interface

HITACHI 3 in microdrive are being marketed for the BBC micro.

Double side discs holding 200k are used which are enclosed in a rigid plastic case.

The single drive costs £225, and the double

version £399 with the unit's packed side by side.

The disc interface is the same as that used for 5.25 in floppies and it is claimed files can be copied between the two sizes.

Acorn had planned to market microfloppies, but

backed out because of standardisation problems between manufacturers of the new microfloppies.

However, Advanced Memory Services of Warrington have taken the plunge and follow Bats and Cuman into the 3in market.

Acornsoft will release 12 tapes for Electron

A DOZEN programs covering languages, games and education have been re-written for the Electron in time for the machine's launch.

Acornsoft boss David Johnson-Davies confirmed the 12 as: Forth, Lisp, Snapper, Monsters, Meteors, Starship Command, Chess, Draughts and Reversi, Creative Graphics, Graphs and Charts, Tree of Knowledge and Personal Money Management.

The major reasons for the re-write are hardware differences between the BBC micro and Electron and to speed the programs up as the new machine is that much slower (see page 43).

Several new facts have come to light since Paul Beverley's review of the 'Elk' was written (he used a field trials machine).

On production machines, a plastic cover will be provided for the edge connector at the rear of the machine to prevent the power supply being shorted.

Also, the MOS and Basic will be incorporated on one 32k chip - but the second socket will be removed so it will not be possible to swap languages as in the review.

And if you're wondering what the little hole is on the left of the keyboard in our pictures, it's where a LED will be inserted.

Acorn has confirmed that a sideways ROM facility will be provided in an expansion box which will be 'available shortly'. Included in this will be printer ports and games paddles. 'Expansion without tears' is how the company puts its.

There has been little reaction at Acorn to press reports of a computer price war.

Neither director was available for comment on whether there was any likelihood of a drop in the £199 tag quoted by Chris Curry. However, the suggestion in one paper of £120 was dismissed by a company spokesman.

Middlesex Poly summer sessions

SUMMER courses for beginners and enthusiasts on programming are being run by Middlesex Polytechnic.

Access to a mainframe as well as micros is included in a week's session costing £75, accommodation is extra.

Middlesex has built up a reputation for computer graphics, mainly based around the Picaso drawing system, and students will have access to this.

Contact the Admissions office, Middlesex Polytechnic, 114 Chase Side, London N14 5PN.

Atom newsletter

THE latest copy of the Atom User Group newsletter has just landed on our desk.

It includes articles on interfacing the Commodore printer, Wordpack, Amber 2400 printer (now defunct), BBC Basic board and Prestel.

The group is run by Peter Frost. See user group page for his address.

Experiment with transducers

PRESSURE and displacement transducers for schools and industry now interface directly to the BBC micro through the analogue socket.

Three devices, two for displacement, are backed up with display software for pressure, velocity, weight and movement experiments (right).

The pressure transducer is based on a Bourdon tube and couplings can be provided for any type of size

of tube. It covers PSI ranges 0-30, 0-60 and 0-200.

Movements of less than 1mm can be detected by the displacement devices, which have been designed for physics experiments such as Young's modulus, and Hooke's Law.

The makers, NTC Services, will write special software for customers. They're at 331 East Prescott Rd, Liverpool L14 2DD. Tel: 051-228 4690.

Draw with the BBC micro and show the true potential of your machine

Fill shapes in one of 23 colours (Mode I)
 Draw points, lines, rectangles, ellipses and circles

This programme has been purpose designed by professional Graphic Designers for simplicity and ease of use, and is undoubtedly the most versatile drawing programme on the market at this time. There is no need to input any numerical data, as all judgements are made visually. The BBC Micro is the finest drawing machine in its price range. Find out what it can do.

The A.B. Designs drawing programme costs only £35 for over 70 functions (Model B). When ordering send Cheque/PO and include 50p for P&P. Please include phone no. with all correspondence. For further information send SAE and phone no. to A.B. Designs, 81 Sutton Common Road, Sutton, Surrey. 01-644 6643 (closed all day Thursday).

GUARANTEED!

Your cassette loading and saving problems eliminated

First of an entirely new style of data cassette recorder specially designed for use with microcomputers.

Just arrived - the first shipment of the remarkable PYE D6600 with the following impressive features:

£49.95
incl. VAT & p&p

SPECIAL OFFER
All data recorders ordered will be supplied with a mains power supply - FREE!

- Remote socket for direct microcomputer control.
- Backed by the international Pye Organisation.
- High quality electronics and finish.
- Compact size (only 115 x 32 x 187mm).
- Pushbuttons for ease of operation.
- Tone control and automatic stop.
- Review and cue facility.
- Three digit tape counter with zero-reset button.
- Automatic recording level control.
- Electronic tape speed control.
- Envelope-type cassette cover.
- One-finger record operation (for non-computer use).
- LED recording/battery level indicator.
- Mains or battery operation.

We guarantee

1. 7 day money back guarantee if not completely satisfied.
2. 12 months warranty on parts and labour.
3. No money will be banked until the goods are ready for dispatch.

Programmable joystick duo

TWO programmable joysticks can be linked to the Beeb using a new adaptor box.

The system is designed so just one device can be connected to the analogue-in socket in the normal way, or two though an adaptor which interfaces the analogue and user ports.

The adaptor can also link one joystick and another device to the Beeb.

Each joystick has a keypad with 12 buttons, all but two of which can be programmed.

Voltmace, who make the system, provide programming notes on the system and are keen to see software written for it.

Each handset costs £10.95, and the adaptor box £13.95. Their address is Park Drive, Baldock, Herts. Tel (0462) 894410.

Basic on video

VIDEO tapes with integral software are being marketed to explain how to use the BBC micro and teach programming.

The three released so far each cost £19.95. The first is designed to help teachers in primary schools use and develop software. It includes two programs.

Programming is covered by the other tapes, which come with three or four programs. The software is downloaded from a video recorder onto audio cassette.

VHS and Beta versions are available from Vector Marketing, Denington Estate, Wellingborough, Northants. Tel: (0933) 79300.

Business spreadsheet in ROM

BEEBCALC – a ROM based spreadsheet program – is the follow-up to Computer Concepts' Wordwise. The £40 package is aimed at homes and small businesses.

A spreadsheet is really a grid of columns and rows showing items and figures. Beebcalc can have up to 99 rows and 26 columns – analogous to a sheet of paper. The screen view at any time shows a section of this 25 lines deep and either 40 or 80 characters wide.

And not only can the package display figure and statistics, but these can be translated into graphs and pie charts using an additional program supplied on cassette.

Once saved in ASCII format on disc or cassette, the display may then be loaded into a word processor. It can also be dumped to a printer.

The advantage of having Beebcalc in a chip is that it is immediately available

Screen shots of 40 and 80 character displays

using the *ROM commands to replace Basic. Some of the ideas of Wordwise have been incorporated by Computer Concepts, such as the use of cursor and function keys.

Instructions for fitting the chip in the BBC micro's sideways ROM sockets are supplied, as is a manual and printed insert for the function key strip.

Two modes of operation are available – menu and display, each with their own set of commands. Escape switches between the two. All but one of the function keys are used to

provide editing, cursor homing, justification etc. Twelve other keys are used, some in combination with shift and variables.

● At least one of the big High Street chains will stock ROM-based software. However, they are reluctant to encourage people to 'open the box' and insert the chips as they have no computer expertise and back-up.

Many dealers also unhappy about chain stores stocking BBC machines and firmware as they fear they will have to 'pick up the tab' when problems arise.

Interface card links to 1MHz bus

Bus interface to Eurocards

EXPANSION is the aim of Beebex – an interface card to link the BBC micro's 1MHz bus to Eurocards.

Control Universal says the device costs £49 and holds up to four cards, from their own Cube range or Acorn's.

A larger version designed for rack-mounting, costs £41 and will hold 14 connectors. Racks start at £72.

Applications include extra memory, analogue interfacing and digital input or output. Up to 1 Mbyte of paged memory can be addressed, or 256 bytes directly using the card.

Next on the company's agenda is a paged ROM to enable BBC Basic to talk directly to I/O devices. This should be available now.

School and pupils share profits from software

A SCHOOL in Essex aims to beat the software shortage by encouraging students to write software. It then shares any profits from the programs marketed.

Tabor High School has produced nine programs so far, for O and A level. The school markets the idea for

the student, and is selling software at £2.50 and £3.50.

A further 12 ideas are at present underway aimed at exam revision in biology, and the school is set to distribute software for outside writers.

The first nine cover blood and circulation, digestion,

heart, classification, heart and circulation, digestion and enzymes, breathing, photosynthesis and simulation of radioactive decay. All run on a model B.

Christopher Smith is in charge of the school project at Courtauld Rd, Braintree, Essex.

BBC SOFTWARE

GEMINI'S BUSINESS SOFTWARE

Written by professional Chartered Accountants and coded by competent programmers. Ideal for small and medium sized companies. Now available from stock.

CASHBOOK ACCOUNTS £52

One of the most innovative programs on the market. Replaces a manual cashbook system, e.g. Simplex and ALL-in One. The program is simple to use and will replace manual Cash & Bank records. Gives you access to vital management information as and when you want. It enables you to keep more positive financial control of your business.

The software is extremely well and lucidly documented. Gemini provide a full technical back-up and product up-date policy. The features include:

Summary of VAT information for VAT returns – Cumulative receipts and payments report analysed over the standard profit and loss and balance sheet headings – Options for departmental analysis of sales and purchases – Audit trail printout of all transactions – Journal routine for entering transfers between accounts and year end adjustment for debtors, creditors, etc. – Trial balance at any interval – Interfaces to Final Accounts program to produce balance sheet and trading and profit/loss account, etc.

FINAL ACCOUNTS PROGRAM £52

Requires Cash Book module. This program will take your cash book data to the logical conclusion of balance sheet, trading and profit/loss account and notes to the accounts i.e. Fixed Assets, land and buildings and capital accounts. Final accounts links to 'Beebplot' for graphic data presentation.

INVOICES & STATEMENTS £17.25

A complete suite of programs together with generated customer file for producing crisp and efficient business Invoices and monthly statements on your line printer. All calculations include VAT automatically and the programs allow your own messages on the forms produced. This program gives you superb presentation and saves time on one of the most tedious tasks in the office.

COMMERCIAL ACCOUNTS £17.25

A gem of a program. Daily Journal, Credit Sales, Cash Book, Credit Purchases, Other Purchases, Sales ledger, Purchase ledger, Bank accounts. Year to date summary. A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view and immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and running balance.

MAILING LIST £17.25

A superb dedicated database to allow for manipulation of names, addresses and other data. The unique 'Searchkey' system gives you a further ten 'user defined parameters' to make your own selections. Feature includes the facility to find a name or detail when only part of the detail is known. It will print labels in a variety of user specified formats.

DATABASE £17.25

The program that everyone needs. The most valuable and versatile in your collection. Facilities include sort search, list print if required. Can be used in place of any card index application. Once purchased you can write your own dedicated database to suit your particular needs with a limitless number of entries on separate cassettes.

STOCK CONTROL £17.25

Dedicated software with all that is necessary to keep control of stock. This program will take the tedium out of stock control and save time and money. Routines include stock set up, user reference number, minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more.

HOME ACCOUNTS £17.25

Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account,

mortgage, H.P., etc. This program also allows you to plot graphically by Histograms your monthly outgoings.

BEEBCALC SPREADSHEET ANALYSIS £17.25

Spreadsheet processors have proved to be important tools for using micros in business, scientific and domestic financial applications. Without any programming knowledge at all, you may:-

- Set up a computerised spreadsheet, with chosen row and column names.
- Specify formulae relating any row or column to any other.
- Enter your source data and have the results calculated.
- Save the results on tape (or disc) for later reloading and manipulation.
- Print the tabulated results in an elegant report format.
- Access saved files and write own reporting or graphics presentation programs for the results.
- Ideal for anything that involves repeated re-calculation of results presented in tabular or spreadsheet format.

BEEBLOT £17.25

Presents numeric and string data together in easily understood pie chart, histogram or graph format. Beebplot has a built-in interface to Beebcalc and the final Accounts program of Cashbook. The facility for mathematical function plotting and screen dumps for Epson or CP-80 printers is also provided. Gives superb results either from direct input of data from the keyboard or via simple access to other software data files. A must for business and education.

N.B. All the above prices are for CASSETTE based Software. For DISC based Software please add £3.00 per Software. When ordering please specify the type of diskette required (40 track or BD track).

★ SPECIAL OFFER ★

During the months of June and July 1983 we are offering the following special discounts:

3 for the price of 2

5 for the price of 3

7 for the price of 4

(above discount does not include Cashbook and Final accounts)

Buy Cash Book & Final Accounts together and pay ONLY £82.75

SHOP HOURS: 9.00am to 6.00pm. Monday to Saturday. ACCESS ORDERS: Simply phone: Watford (0923) 50234.

EDUCATION Software

JUNIOR MATHS PACK (32K) £6.95
Makes learning fun for 5-11 year olds. This package consists of 3 programs (menu driven) that increase in difficulty as your child becomes competent. A very good supplement to standard educational methods.

WHERE? £6.95
Do you know WHERE? you are? This well written program, using high resolution graphics offers timed tests on the geography of Great Britain.

WORLD GEOGRAPHY (32K) £7.00
Beautifully drawn Hi-Res colour map of the world illustrates and aids this graded series of tests on capital cities and populations of the world.

WDRDHANG £7.80
(Age 7-13). A word guessing program based on the well known Hangman game. Uses full colour graphics. Complete with 260 words and the facility save your own list of words.

WORLDWIDE £7.80
(Age 7-15). Two constructive geography programs allowing children to build detailed data bases covering both the UK and the world. Encourages children to refer to atlas and reference books. Save the database anytime.

ANIMAL/VEGETABLE/MINERAL £4.95
(Age 7-13). Provides an opportunity for children to teach the computer to differentiate between objects. The program tries to guess the object the child has thought of, using personalised responses like Mmm... I am thinking.

BRITISH GEOGRAPHY £6.95
Teaches a child the locations of Cities and Ports using directional keys.

CAROUSEL £5.50
Aimed at junior school age. Sequences of colours and sounds teaches a child to concentrate.

HAPPY NUMBERS £7.80
(Age 4-6). No reading skills are required to use this colour graphics number recognition and counting program. Children build patterns of flowers corresponding to figures, quickly learning their significance.

INTRD TD ARITHMETIC £10.45
4 programs – Additions, subtractions, multiplications and divisions. Help stage, moving graphics and colours. Worksheet produced at the end of program. (5-7 years old).

WRITING £5.50
Full screen demonstration of correct formation of lower case alphabetic characters. Several choice of sequence (5-7 years).

BEEB SPEECH SYNTHESISER

VERSATILE SPEECH SYNTHESISER UNIT FOR THE 88C MICROCOMPUTER

Watford Electronic's very own Speech System. Specially designed so that even a novice can make his BBC talk:-

SIMPLY the best! – An unlimited speech synthesis system. Complete with easy-to-follow manual. Controlling software is in ROM so no Cassette Loading problems!

PHONEMES for word synthesis – That means unlimited vocabulary! No extra speech dictionary chips to buy!

ENGLISH accent – Utilises inflexion techniques to produce highly comprehensible speech.

EASY to use system – Just plug the software ROM into a socket, the Speech unit into the User Port, and away you go! No specialised 'dealer upgrade' required!

COMPACT unit – The whole system is built into a small case – easily tucked behind the computer.

HOURS of fun! – Suitable for any application – Games, Educational Programs, Specialised Packages.

We know this all seems to good to be true but **DON'T BE LEFT SPEECHLESS!** Order your Versatile Speech Unit now!

BEEB PEN

(BBC Wordprocessor in 4K ROM)

BeebPen has been written completely in machine code for the BBC Micro to facilitate maximum speed and number of functions. It is without doubt one of the best things to happen to BBC Micro since its launch. BeebPen has been designed to be as simple to use as possible while still retaining the maximum power and versatility. Numerous functions include right justification, block operations, text compression, full cursor control with on screen editing, a full set of printer options and editing in 80 column mode. BeebPen ROM plugs into one of the ROM sockets, no track cutting required.

BEEB PLOTTER

Watford Electronics' BEEB PLOTTER will work with 32K BBC Micro. Connects to Analogue port. The unique design makes it accurate and simple to use. The comprehensive booklet supplied, describes its use in details and shows some of the possible applications.

The special features include:-

- * Works in all graphics mode and any colour selectable.
- * Commands printed on Tablet and On-screen instructions.
- * Special routines enable pictures to be quickly loaded from tape.
- * Works with all operating systems and ECONET. Tape and Disc versions available.
- * Large drawing area (32cms x 23cms).
- * Maps, Pictures and Diagrams produced quickly and easily.
- * Transparent tablet enables maps and diagrams to be copied directly from books.
- * Commands include line, circles and rectangle drawings, infilling, full editing and an easy to use copy and move feature.
- * Screen dump routines included for Seikoshia and EPSON printers.
- * Routines are included to allow user to incorporate pictures in their own programs.
- * Designed by a professional teacher with educational uses in mind.

ONLY £59 (£3 carr.)

EPROM PROGRAMMER for BBC MICRO

At last! - the EPROM Programmer for BBC Micro Computer from WATFORD ELECTRONICS that will suit both your pocket and all your requirements. Programs all popular types of EPROMS from 2K bytes up to 16K bytes - **2764 - 2516 - 2532 - 2564 - 2764 - 2712B.**

This extremely powerful system is designed for your needs of TODAY & TOMORROW! - 80C Basic programs can be copied into EPROM and subsequently re-loaded faster than from a disc! Suitable for both hobbyist and professional users!

Just look at these features:

- **COMPLETELY SELF CONTAINED** - Housed in its own sturdy case - Uses its own Power Supply - Connects directly to the 1MHz Bus - Simple and Safe!
- **FULL SOFTWARE SUPPORT** - Comes complete with simple to use ROM based software - Facilities include Verification, Reading, Virgin Testing, Writing, Editing, Saving, Loading and more! NOTE!! - This software does NOT simply comprise hastily prepared routines to get you going, but is a professional, purpose designed applications package.
- **ACORN BUS COMPATIBLE** - Use of the 1MHz connection complies with all Acorn addressing recommendations - That means you can still add-on such things as the TELETEXT, IEEE 488 and PRESTEL Adaptors without having to disconnect everything.

You don't need just any Eprom Programmer - you need **WATFORD ELECTRONICS EPROM PROGRAMMER System.**

13 ROM SOCKET BOARD

Are you wondering where to fit new ROM based software inside your computer in addition to the BASIC, WORDPROCESSOR, OFS, and FORTH ROMS? Then our add-on 13 ROM Socket Board is the answer. Simply plugs into one of the four ROM sockets currently available in 8BC Micro. There are only 4 solder connections to be made. Full instructions are supplied.

Our 13 ROM SOCKETS BOARD enables the User to increase the Sideways ROM capacity from the basic four sockets on the main board up to the full SIXTEEN capable of being supported by current operating systems. In addition the board is designed with the facility to hold upto 16K RAM, which when switched into operation is automatically selected by any WRITE signal to the Sideways ROM area. This gives the User the ability to write a utility or language and upon pressing break have the utility or language up and running (new ROM software can be developed and tested in situ.)

The Board gives the User, plenty of freedom to explore the possibilities of the new paged ROMs due in the coming months and offers them the chance to develop their own.

All essential lines are buffered and the Board meets or exceeds all timings for operation in the BBC Microcomputer.

Supplied ready-built and tested

ONLY £35 (carr. £1)

Watford Electronics' own

BEEBMON

A ROM based machine code Monitor for the BBC Micro. It enables machine code programs to be debugged and altered easily and quickly. Being a ROM, its Commands are always readily available and occupy no USER memory.

The special features includes facilities like: TABULATE, MODIFY, FILL, COPY, COMPARE, SEARCH (Hex & ASCII), CHECKSUM, DISASSEMBLE, RE-LOCATE, SINGLE STOP, SET BREAK POINTS, SCREEN DUMP ROUTINE, DUMB TERMINAL and many more facilities.

Introductory Offer: £18

TEX EPROM ERASERS

- * New Broom for EPROMS *
- * TEX Erasers Sweep Clean *

EPROMs need careful treatment to survive their expected lifetime. Rushing it could burn their brains out. So cop-out of this helter-skelter world, take it easy the TEX way and give your chips a well earned break. Cool, gentle and affordable. EPROMPT does it properly.

Two versions available:

- **EPROMPT EB** - The standard version. Erases up to 16 chips. **£32.00**
- **EPROMPT GT** - Erases up to 32 chips. Has an incorporated safety switch which automatically switches off the UV lamp when the Eraser is opened. **£37.00**

TEXTIME

(SOLID STATE ELECTRONIC TIMER)

EPROM Erasers need just half an hour to finish their job. It is the proper erase time for all EPROMS. While the Eraser is busy you may take a break but not for too long without our TIMER on the job. Over erasing can shorten data storage time. TEXTIMER will remember to switch off the lamp and your chips will forget nothing new. TEXTIMER will pay for itself in no time.

ONLY £15.00

★ SPECIAL OFFER ★

EPROMPT EB plus TEXTIME - ONLY £42

EPROMPT GT plus TEXTIME - ONLY £48

EPROMS for BBC MICRO

	1+	25+
2764-250nS	£3.95	£3.50

BBC MICRO DFS by Watford Electronics

This new OFS is fully compatible with ACORN OFS and has many more features.

The extra features include:

- Optional Double Directory (gives 62 Files per side)
- 40 Track disc can be read on 80 track drives (software switchable)
- Workfile saves typing of Filenames.
- All Format and Verify commands ROM resident, so no costly utility disc needed.
- Special Commands are included to ease transfer of Cassette programs to disc.
- Optional - Copy command available.

Price: DFS ROM only **£42**
Complete OFS Kit **£85**

(P.S. We shall exchange your existing Acorn OFS ROM for this highly superior Watford's 8eebRom for £35).

Wordwise

WOROWISE Model B

Without doubt the most sophisticated piece of software yet written for the BBC Micro, Wordwise contains all the usual word processing features enabling characters, words, sentences or any defined section of the text to be deleted, moved or copied from one part to any other part of the document. The more complex facilities such as search and replace or file handling commands are menu driven so that even a beginner can understand how to operate them. Wordwise will work with whatever filing system is currently implemented. Supplied with full fitting instructions and a spiral bound manual. We believe this word processor compares favourably with those costing many times as much.

Special Offer - **£34**

LOGO II

This language is very popular in American schools as it is an ideal educational program.

It can graphically demonstrate the ideas of defined procedures, sub-routines, loops and even recursive programming. Gives excellent introduction to LOGO language for young and old alike.

£9.95

FORTH ROM for BBC

This superb compiling language now available in ROM. Simply plugs into one of the ROM Sockets. **£35.00**

Full FORTH Manual **£6.75**

LOGO in ROM

This popular language now available in ROM. Manual included with the ROM.

PRICE: **£36.00**

APPLICATION SOFTWARE

CONSTELLATION (32K) £6.50
The Great Bear! The Southern Cross! The Horned Goat! See the night sky gloriously depicted in hi-res graphics. Constellation has been adapted and enhanced from our successful ATOM program.

OISASSEMBLER (16/32K)

The most powerful, flexible and easy to use Oisassembler currently available for the BBC Micro. Has 5 modes of operation from memory dump to full automatic disassembly - ability to identify any location in memory with a label - operating system entry points and indirection vectors are already labelled when the Oisassembler is loaded - ability to define a 'map' of up to 72 separate areas of machine code - output may be directed to the screen or a printer - areas of code can be disassembled and output saved on tape or disc in BASIC EXEC format for later incorporation into user programs - Machine-code programs may be loaded and disassembled regardless of their actual run-time location - the current set of labels, map and associated data may be saved at any time on tape or disc. This data can be reloaded at a later date and disassembly continued - full error checking and reporting is carried out at each step - disassembler operated by typed commands or the user definable user keys - full instructions are supplied in the form of a 'HELP' program - available on Cassette or Disc.

Cassette £6.90

Disc S/D £9.90

Disc D/D £9.95

EMULATOR £6.95

An extremely powerful and flexible Cassette based machine code interpreter from Simonsoft. Treats machine as a 'high level' language and is in many ways analogue to BBC's built in BASIC Interpreter. It can therefore be used as a Monitor, Oisassembler, Assembler and 'Peeko' Computer.

Filer £8.95

A powerful file handling program for BBC FILER allows the user to build up, manipulate, store and retrieve data on the BBC. A very powerful package indeed.

Computer Concept's Firmware

BEEB-CALC £34.00

A ROM based spreadsheet program, like wordwise this firmware is fast and simple to use - yet is a powerful spreadsheet analysis program, considerably better than the original 'calc' program - full floating point maths. Works in 40 or 80 column screen modes - variable column widths. Works with either cassette or disc. This ROM coupled with Wordwise can turn your micro into an ideal small business machine.

DEBUGGING PROGRAM £19.00

A machine code program. Essential for the machine code programmer. An ideal complement for the assembler built into the BBC machine. Contains a full machine code monitor allowing examination and alteration of memory, registers, setting of break points and even single stepping through machine code programs.

DISC DOCTOR £19.00

This ROM contains useful disc utility programs. Enables recovery of any data off the disc including deleted files etc. The full disc editor allows the alteration of any bytes directly on the disc (or in memory), or the loading and saving of any track or sector on the disc. Automatic transfer of programs from tape to disc and vice versa. Also includes a whole host of other useful utilities - string search, function key editing, the ability to format 35, 40 & 80 track discs.

PRINTER TOOL-KIT £19.00

This ROM includes routines for high resolution screen dumps for both the EPSON and NEC printers. Will work in any graphics mode with automatic grey shading of all screen colours. The most useful feature of this program is its 'spooling' capability. This enables data such as a program listing of high res screen dumps to be automatically spooled from your disc to the printer while using your BBC machine for running other programs.

* SPECIAL DISCOUNT OFFER *

We allow a special 10% discount on all the above four Firmware when purchased with our '13 ROM Socket Board'.

GENERAL SOFTWARE

JUNIOR MATHS PACK (32K) £6.95

Makes learning fun for 5-11 year olds. This package consists of 3 programs (menu drive) that increase in difficulty as your child becomes competent. A very good supplement to standard educational methods.

WHERE £6.95

Do you know WHERE you are? This well written program, using high resolution graphics offers timed tests on the geography of Great Britain.

Free bulletin board service for hobby micros

A NETWORK of nine free bulletin boards has been set up for micro users to exchange information.

With a modem and suitable software, messages can be posted and retrieved on subjects such as hints, items for sale, wanted, personal - and there is a software library. The system is geared towards hobbyists, and the boards are supported

by computer groups, retailers and hobbyists.

Although each is individual, the communication protocol is standard, and runs through the RS232 interface.

If you have terminal software and modem, set up the serial port at 300 baud, word length 7, parity even and stop bit 1. Once on the system, a help command is

available - but don't just hang up at any time as this can have nasty results!

The Association of Free Public Access Systems is made up of nine bulletin boards.

Details from Frederick Brown, Forum 80, 421 Endike Lane, Hull HU6 8AG. Forum 80 can also provide terminal software for the BBC micro.

Teacher study packs from AU

SELF-STUDY packs on micros are available for teachers from the Open University.

The first two - Awareness Pack and Educational Software - have been produced for the BBC micro and include software. The second is to help teachers with experience evaluate software.

Details from: Project Manager, Micros in Schools Project, Open University, Milton Keynes.

News in brief

THREE primary programs are the first fruits of a liaison between Longman and Ladybird publishers. *Rally* covers maths, *Terrible Tales* reading and size-estimation, while *Sheepdog* encourages problem-solving and compass work.

The packs are £9.95 each (+VAT). Other programs on maths and English are planned for September.

BRISTOL University wants to hear from people who would be interested in attending weekend programming courses. Contact David Wilde, Extra-mural studies, 32 Tyndall's Park Rd, Bristol BS8 1HR.

EDUCATIONAL publisher Ward Lock is to distribute and market Chalksoft products for the BBC micro. These include *Punc-man* and *Nosher* on punctuation, *Letters* and *Capitals*. The company will give demonstrations in schools.

PUFFIN are sponsoring a national programming competition to find original software and games. The company also plans to release *Micro Games*, a book of listings, in August.

TRANSFORMERS to filter out mains spikes and interference are made by Cetromic Components in Ware, Herts.

The company claims to guarantee a 'clean supply', no matter what the type of disturbance. Tel: (0920) 871077.

Software on the radio

RADIO stations all over the country have taken computers to their hearts. Many carry weekly features, while several have already broadcast software.

Bristol's Radio West send out software over the air each week using two methods. Some goes out during *Datarama*, but most is broadcast when the station closes down at 1am with the channel's identification code every 15 minutes.

The longest program ran to 17 blocks and took 35 seconds. Listeners can download listings during the show to look at as they listen.

Presenters Tim Lyons and 'The General' can be heard on Monday evenings, and write most of their own software (Tim has a BBC micro).

In Leeds, the local BBC

station has a fortnightly slot on Tuesdays at 6.45 called Abacus. It started when a local user group approached producer Jennifer Bowen with the idea last summer. She trained them up and they still write most of the show.

Software for eight machines has been broadcast, mainly graphics and special messages.

Radio Brighton also has a fortnightly Tuesday programme lasting 20 minutes. London's Capital Radio is also developing a BBC micro system to use in its studios.

Author in action

HINTS and tips author Joe Telford is one of the guest speakers at a user group lecture in October.

He will give a survey on educational software in primary and special education to Norwich and District BBC Micro User Group.

This will be followed up at the same group by a talk from Chris Pointer and Diana Thomson in November.

Paul Beverley runs the groups and meetings are held at Norwich City College (see User Group page).

● Our apologies to Rob Alecio of Oxford who was uncredited in the July issue. 'Passing array variables' was his article, but the covering letter somehow disappeared.

Software makes graphics easy

DRAWINGS on the BBC can be produced using Easy Graphics - a package from Hexagon Software priced at £13.50.

Circles, colour filling and mixing, rubber-band line drawings, screen saving are all provided, as well as repeat function.

The package is designed for non-programmers, and includes a manual, demonstration program and program generator. Tel: Dudley (0384) 232992.

MICROS IN SCHOOLS FRIEND OR FOE?

"To help you make the most of the Micro"

THE OPEN UNIVERSITY

VAT program and game

BUSINESS software to help cope with VAT returns and invoicing from Understanding Ltd has been converted for the Beeb.

Vatkeeper takes the slog out of filling VAT form 100 while *Invoicer* calculates VAT and discounts, produces invoices and customer sales histories. Prices for these systems range from £50.

A management training game, *Corplan*, suitable for A-level upward also has a BBC version.

The products are aimed at schools and small businesses and come with documentation.

Understanding Ltd are at 100 Cricklewood Lane, London NW2 2DS. Tel: 01-450 1144.

● Adventure-Zone Software specialises in you-know-what and hopes to provide an advice service and pass tips to and from players. Write to 10 Ennis Close, Harpenden, Herts AL5 15S for details.

Junk speciality

THE Computer Junk Shop in Widnes specialises in second-hand and obsolete equipment.

Chips, printers, components, boards and even BBC micro keyboards have been seen to pass through their hands at computer shows. If you're ever crossing Runcorn Bridge, they're five minutes away at 10 Waterloo Rd. Tel: 051-420 4590.

Atom winner

ATOM user David Adams has won first prize in a schools computing competition.

His program sets up multiple device tests on any subject and analyses the answers given by pupils. Although written for an Atom, the software has now been converted for a Beeb.

David's reward was £100, with a further £200 going to his school. He is a member of the Manchester Acorn User Group, and is just turned 16.

MUSE celebrates its first decade this month

MUSE celebrates its tenth year this summer at its annual conference.

The group exists to help teachers and schools with every aspect of micros, and many of its leading members are now household names in the computer world.

Planned speakers at the conference include John Coll of Acorn, Roy Atherton

author of *Structured Programming with BBC Basic*, Eric Deeson, Bob Trigger of Five Ways Software and Colin Wells of ITMA.

Paul Bond a member of the design team for the BBC micro's operating systems will be talking on the subject.

Telesoftware, timetabling, music, the BBC Buggy,

networks, Logo, interfacing and persuading teachers to write software will also be covered.

The conference takes place at Nottingham University on July 25-27. Membership details are available from the membership secretary at MUSE, Freepost, Bromsgrove, Worcs. B61 7BR.

PCB for Atom sound generator

ATOM users - upgrade your machine to produce sound effects that will rival those of the BBC micro by adding a sound generator. The May issue of *Acorn User* explains how to interface a sound board based around the AY38910 programmable sound generator chip.

The printed circuit board to accompany the article costs £5.38 (inclusive) and is available from: Electro Technical Services, 55 Raymond Road, Helleston, Norwich NR6 6PN.

Interface box for BBC micro

INTERFACE your BBC micro with a specially-designed interface box outlined by Paul Beverley in *Acorn User* (see May's issue for the design and June's for how to test it). For £11.95 we can provide a double-sided printed circuit board with plated through holes, and component overlay.

A kit of parts, as well as fully-built and tested boards is also being made available (should cost about £80 for completed interface box). These prices include UK postage and VAT. Please allow 28 days for delivery.

Make cheques payable to Electro Technical Services at 55 Raymond Road, Helleston, Norwich NR6 6PN.

ACACIA COMPUTERS' NON-VOLATILE RTC + RAM WITH ROM SOFTWARE PROVIDES BBC MICRO USERS WITH A SOPHISTICATED ELECTRONIC DIARY SYSTEM, AS WELL AS A FULLY FUNCTIONAL FILING SYSTEM.

DIARY

The diary has many automatic features such as reinserting regular reminders. Reminders are displayed on power-up or at a preset time. It has a real-time clock and calendar which do not need to be initialised on power-up. The alarm mechanism is operational when the computer is used in virtually all modes, unlike other diary programs.

FILING SYSTEM

Enables you to save programs, soft key strings, power-up initialisation, etc. Includes many features: wild-card filename search, file manipulation, automatic compact, dating of files etc. etc.

EXPANDABILITY

Extra memory expansion will be available later from ACACIA. The box supplied is large enough to house these extra memory cards.

FEATURES

- Powered from BBC micro and has an extra socket for powering disc drives or other peripherals.
- Alarm output for switching other equipment at a preset time.
- Battery guaranteed for 3 years (typical life 6 years.)
- Easily installed: plugs into 1MHz bus, ROM fitted in BBC micro paged ROM socket.
- Contains 4KBytes CMOS static RAM.
- Complete with full instructions.

Micronet and Beeb make news

Bill Penfold reports on developments which could revolutionise reporting

IT SEEMS daft. Journalism is supposed to be about communication - conveying facts and comments, news or ideas, as quickly and as simply as possible. But while satellites link the world in seconds, much of British journalism seems to have got little further than the age of the quill.

True, most of us hacks have managed to learn to use a telephone and as long as the copytaker on the other end is not totally dyslexic it is usually possible to get the story across. But oh, the struggle!

Like Robert Redford in *The Candidate*, a typical reporter as he bellows down a crackling phone line can be heard to mutter 'There must be a better way...'

Maybe though - thanks to a BBC micro and Micronet 800 - there is a better way... and one which promises soon to get even better. For with a little encouragement plus a bit of firmware, ordinary Beeb micros could be pioneering a new, important area of journalistic news gathering.

Now before anyone points out that there are already dedicated word-processors designed for semi-dedicated hacks to pump copy straight into their newspaper's computers, let's examine the present position.

Probably it was a little harsh to claim British journalism is still clinging to the quill as there are one or two papers feeling their way into the late 20th century.

The news agency Reuters for instance is beginning to

supply its reporters with dedicated machines incorporating a small monitor and an acoustic coupler for filing from conferences. A few provincial papers - the *Wolverhampton Express* and *Star* and *Portsmouth Evening News* have also introduced or are beginning to bring-in 'direct input'. But they are few and far between, and their systems are also pretty expensive - especially if they need a mini at the other end.

So until now, computer-transmitted copy, was not a viable prospect for most papers. But there is an experiment underway which could bring copy to your local High Street gazette or chronicle long before it gets to Fleet Street.

Venture

The experiment involves my BBC B, Prestel and a couple of medical newspapers based in Guildford. The two papers are *Doctor*, sent each week to every GP in the country, and its sister publication *Hospital Doctor*.

Though based out in the sticks the *Doctor* papers are go-ahead in the crowded and competitive world of medical journalism and earlier this year began a new venture with a Prestel magazine (Page *27634).

My problem, as the papers' parliamentary correspondent is ensuring that

copy sent later in the week arrives in time for the final Friday deadline. Stories sent by post on Mondays or Tuesdays usually arrive well ahead, but from Wednesdays on it was never certain they would be on the news editor's desk when needed.

But with their Prestel magazine, the two medical papers naturally had a Prestel terminal, and with the advent of Micronet, providing access to Prestel's mailbox system seemed to be part of the answer.

At Prestel the idea was taken-up with interest. A special pre-addressed Mailbox page was set up for me on the Enterprise computer. (Eventually every Prestel computer will be linked to Mailbox.)

It was a start. But the major problem was, and still is, that you have to be 'on line' to Enterprise the whole time.

Now that is no problem for sending one or two frames, but two or three news stories, each between 250 and 700 words, can keep you on line for a long time.

The answer is to be able to tap in the copy off line, save it as files on disc or tape and then input when on line to Prestel. That is not possible on the present software. But a new ROM promised by Micronet will, so it is claimed, enable you to do that for about £11.

Coming about the same time is a development which probably is even more significant. Micronet is planning to bring out an inexpensive hard-wired single chip modem as an alternative to the acoustic coupler. This will plug straight into the computer and a phone jack.

The importance of this is that the BBC could be equipped with a variable baud rate modem.

And that opens up the possibility of micro speaking to micro. The present acoustic coupler has a output rate of 1200 but an input rate of only 75. The variable baud rates of the modem should be read and output both at 1200 - for £60.

Question

It should also mean that on a standard home computer such as the Beeb it will at last be possible for every local paper with a branch office in a neighbouring town to be able to afford its own 'wire' service. Or for ordinary journalists, writing for a number of different publications, to be able to write copy on a micro and then 'phone it in.'

One question mark over the suitability of the Beeb is the standard of its keyboard. This may surprise users who compare it with the touch boards of Sinclairs and Atari 400s or the dead skin feel of the Spectrum. But for long-term typing of copy, the BBC's keyboard could do with an up-grade. It's surprising no one has yet come up with one.

HIBITOR NEWS . . . EXHIBITOR NEWS . . . EXHIBITOR NEWS . . . EXHIBIT

A NON-VOLATILE RAM filing system and electronic diary, supported by comprehensive software in a sideways ROM will be demonstrated by **Acacia Computers**.

The filing system is an addition to the existing range (Disc, Econet, etc.) with all the advantages of static RAM (fast access, no moving parts, immunity to dust, etc).

A typical application will be to automatically return the computer to the state it was in before being switched off. For example, the user softkey strings, screen mode and character definitions can be reinitialised, the user port re-enabled and programs reloaded.

The electronic diary takes much of the work out of keeping a diary. For example, a reminder can be set to automatically occur at regular intervals, from 31 minutes to 31 years. It can inform you of the day's appointments, with messages of any reasonable length; either immediately the computer is switched on, or at preset times.

Of course, the diary software never needs to be loaded, and the alarm system is operational while the micro is used for entering and running programs, word processing, etc.

The filing system/diary unit has its own clock/

ACORN USER EXHIBITION

BBC MICRO · ATOM · ELECTRON

Cunard Hotel London W6
25 - 28 August

calendar which keeps time even when the computer is switched off.

* * *

THREE new **NEC** programming courses will be on show: Beyond Basic, Structured Basic, and Interfacing and Control on the BBC Micro. Software displays will include All Fingers Go! - the NEC's fast typing course. Users will be guided through all NEC's offerings - including 30-Hour Basic - by special software.

* * *

THE **Computer Bookshop** will offer the best selling books for all popular home computers, including BBC and Acorn.

Titles from 35 US and UK publishers will be on display.

* * *

THE official BBC carrying case will be on show this the first time at the Acorn User Exhibition.

Manufactured by **Intastor Micro Aids** in tough, good looking, durable fibre board, the case is designed to accommodate the micro with separate compartments for leads, cassette player, and handbook.

This is the latest addition to a growing list of BBC micro support products which also include the official BBC programmers' Kit (on sale at a specially reduced price of £12), two sizes of print-out binders

and a programmer's grip binder.

* * *

MICRO-AID aims to help people understand how to use the micro by giving 'aid'.

The company switched all its efforts to the Beeb in 1982.

All the software costs less than £14 and in some cases as low as £1. The range includes utilities, games, education and business programs as well as hardware such as Epson printers and Teac disc drives.

* * *

AN **EXPANDABLE** console will be on show from **Silent Computers**.

It houses the BBC micro plus disc drives with the VDU on top, or BBC micro plus drive plus second processor or teletext adapter. All interconnecting wiring is kept out of sight within the console.

Coming soon is a matching bolt-on module, allowing the console to grow with your needs.

Micro owners who only need a VDU stand will find one to slip over the BBC and allow adequate ventilation. The stand acts as a dust cover when the micro is not in use. The console can be fitted with a hidden bracket, making a very good thief deterrent.

CAGEY GRAPHICS

THIS program by Mike Milne draws a cylindrical cage in two colours by rotating a rectangle. Colour 1 controls the 'spokes' of the base and top circles which form the cage, and colour 2 decides on the colour of the 'bars'.

Just type the program in, run it, and follow the instructions. Limits are given for the size of

the rectangle, and the number of steps in the rotation. These may be exceeded to produce some weird and wonderful effects!

The colour input can also be larger than the range given (1-7), and this will produce flashing colours.

If you don't wish to input any variables, just press return in each case and the computer chooses random sizes and colours.

THE ROOT OF LINKED LISTS

LINKED data structures are an important concept – especially for hash tables – and rely heavily on recursion (*Acorn User* May, July). The list: A B C D E is a sequence of items in order, A being the first and E the last. To emphasise the ordering we can use arrows:

A → B → C → D → E

For each item we need to know only two pieces of information: its name or value (A, B, C, D or E); the next item, if any is.

We can deduce further information from this about the list. For example, we may observe that the second item after A is C by observing the B follows A and then looking at B and observing C follows B. Item A need not actually hold the information that C is the item two further along.

You may now be able to see how this relates to hash tables (*Acorn User*, July). Items with the same hash value are put as a list, containing their values, instead of rehashing to find a space for the multiple items in the table.

This requires a suitable way of representing the information in a computer – a 'linked list'. The first piece of information, the name or value of the item, is held as a numeric value, character value or string. To represent where the next item is we can use the address of

LISTS

Stan Froco
analyses linked data structures, outlines trees, and produces a treesort

the next item in the computer's memory.

Basic provides some useful ways of doing this. We can set aside some memory by using the DIM statement: DIM fred%7.

Note that no brackets are used because this is not an array declaration. We are instead setting aside an area of memory of eight bytes, and fred% holds the address of this memory. We say that fred% 'points' to a 'vector' of eight bytes.

Two Basic operations are available to get at this vector. The ? operator can be used to look at and set up individual bytes, eg ?fred% = 37 and ?(fred% + 3) = 42. Note that this second example is identical to !red%?3 = 42.

Similarly we have ! to get four

bytes at a time eg, !fred% = 2000 + 2000 and fred%!3 = 42000000.

We now have everything needed to set up our list A B C D E, and program 1 provides the code. The first four bytes of each vector hold the name of the item, and the second eight point to the next item in the list. fred1% points to the whole of the list and is known as the 'head' of the list.

All this may seem trivial, so I shall describe a slightly more sophisticated data structure. Imagine an item with three pieces of information: The name or value of the item; an item following this item; a third item.

We could draw this as in Figure 1, to represent a structure is called a 'tree', where A is its 'root' and there are two 'branches'. Notice the symmetry, and that each branch is itself a tree. Hence, C and D are the branches of B and F and G are branches of E. Items C, D, F and G have no branches and are called 'leaves' of the tree. Figure 2 shows a particularly useful tree which has the property that all the numbers on the left branch are less than the root, and all the numbers on the right branch are greater than the root. Furthermore, its two branches have exactly the same property. We can write a small procedure to print a tree like this with the numbers in order. If we represent a tree like the

Figure 1. Structure has two branches, which in turn are also trees

Figure 2. Note symmetry of this special tree

linked list earlier using three vectors:

item!0 holds the value of the item
 item!4 points to the left branch
 item!8 points to the right branch

we can use PROCprintval (program 2) to print the tree out in order. Since the left and right branches are both trees, we use a recursive call to PROCprintval to print these out. We know when we have reached the bottom of a branch, because leaves have their pointers set to -1. If PROCprintval is called with -1 it knows it has no printing to do, and just returns.

All that is needed now is a way of setting up an ordered tree like this and we have another way of sorting numbers, treesort. For very large amounts of data it is even more efficient than Shell sort (*Acorn User*, June).

If we already have an ordered tree, FNaddelement from program 2 will add a new item to the correct place in the tree. If the new item is less than the root, we use a recursive call to add it to the left branch, otherwise we use a recursive call to add it to the right branch. When we get to the correct place at the bottom of the tree, FNaddelement is called with -1 (the pointer from a leaf). FNnewnode is then used to create a new leaf, with the value of the new item, and since it is a leaf, left and right branches are given the value -1.

The main program uses FNaddelement to generate a tree and then print it. First an array num% of random numbers is set up for sorting. Then the tree, tree% is initialised to -1. This is of course an ordered tree, but with no elements. FNaddelement is then used to add each item on to tree%. Finally PROCprintval is used to print the tree out in order.

Basic is not the best language for handling linked lists. The ? and ! operators provide greater flexibility than their cousins PEEK and POKE, but have been poached from another language, BCPL (*Acorn User*, April). Some languages have been designed solely on lists, the most famous being Lisp and its successors Logo and Prolog. For really serious handling of linked data structures (which underlie all large programs) one of these languages is needed.

Program 1. Setting up the list A B C D E

MYSTERIOUS ADVENTURES

FOR BBC MICROCOMPUTER MODELS A & B*

Join the growing band of Adventurers who are enjoying these absorbing and stimulating programs. Step into another world of Fantasy, Magic, Mystery and Sorcery. Only your wits and cunning can ensure success in these scenarios!

- WRITTEN IN ULTRA-FAST MACHINE CODE.
- SAVE GAME FEATURE.
- SPLIT SCREEN DISPLAY.

1. THE GOLDEN BATON — Venture into a strange province of Sorcery and Evil Magic to recover the Golden Baton, a priceless artifact whose powers are said to bring great Health and Prosperity to the Land.
2. THE TIME MACHINE — As a Newspaper reporter you are sent to investigate the eccentric professor who lives in the old house on the Moors. What is his secret and why is his house now deserted?
3. ARROW OF DEATH (Pt. 1) — A blight has fallen on your homelands, the Baton has become tarnished and now radiates a malevolent aura of Evil. Your mission is clear — trace the source of this Evil and destroy... or be destroyed. This is the first part of an Epic Adventure although each part can be played as a stand alone scenario.
4. ARROW OF DEATH (Pt. 2) — You now have the means to destroy your enemy... but you are far from home and this land is strange to you. Can you cope with the deadly perils which approach you and have you the strength to see your mission through to the final conflict?
5. ESCAPE FROM PULSAR 7 — Alone on a gigantic Space-Freighter... The rest of your crew have died horribly at the hands of a mutated Zoo-Specimen. Your only chance of escape is to reach the Frail Shuttlecraft. But the lurking Monster is hungry and you are the only food it has left...
6. CIRCUS — Your Car has run out of Petrol on a lonely road miles from habitation. As you trudge reluctantly down the road in search of help you are suddenly confronted by an amazing sight... in a nearby field is a Huge Circus tent! But this is no ordinary Circus as you will soon discover...
7. FEASIBILITY EXPERIMENT — Far across the gulfs of time and space, a dying race of super-intelligent beings search the Universe for a Hero to save their existence... At length their thoughts turn to planet Earth. You are chosen to be their saviour in a bizarre scenario where death is a mere thought away...
8. THE WIZARD OF AKYRZ — You are in the Royal Palace. The King beseeches you to rescue his daughter from the evil wizard. If you succeed your reward will be priceless... failure will bring certain death.
9. PERSEUS AND ANDROMEDA — Travel into the realms of ancient mythology. Battle with grotesque monsters and supernatural powers as you search for the hidden secrets of myth and legend.
10. TEN LITTLE INDIANS — This mystery begins with a train journey into a strange country. What secrets are held by the strange country mansion? What meaning is attached to the strange idols? Maybe you will find out if you live long enough...

*Adventures 5-10 require 32K RAM

Each adventure comes attractively packaged for just £10.29 inc.

ALL THE FUN OF THE FAIR

SUMMER is the time for fetes and fairs and the BBC micro can mimic many of the novelty sideshows for just a few pounds worth of components. Let's start by counting the cash. On stalls dealing with money, there may be a need for the micro to keep track of cashflow, and we can exemplify this with a reference to an admissions stand.

Let's look at what might be required at the turnstiles. Normally there will be separate entry costs for adults, children and OAPs, added to which there may be a charge for a programme. The stall normally gives out a ticket in return. In addition, it would be helpful to automatically cost groups, sort out change, produce a balance for the end of day and give attendance statistics. The benefit of the computer here is that the stall can be run by one or two staff at most,

Joe Telford tests your strength, designs a passionometer, collects the cash and prints tickets for a summer shindig

and the statistics will prove useful for planning if the event is regular.

Program 1, can cope with admissions, and be adapted. Figure 1 is the insert for program 1. The only keys used by the operator will be these function keys plus the number keys. The program will actually issue tickets (figure 2),

providing you have a 40 column printer (in this case a Tandy Graphics printer plotter, about £100 in the sales). If you don't wish to have a ticket, simply add a line: 1950 ENDPROC

The other facility is to produce a breakdown of admissions at the end of the day. This is normally produced on the printer so if you haven't one available, remove the VDU2 of line 1710. The escape key and autorepeat facility are turned off to help the operator.

Now let's see how to use program 1. When it is run, the screen will present the categories for admission. As people come to the stall each group can be entered by pressing the appropriate keys. For example, a group of three adults, two children and a senior citizen buying two programmes between them would be entered by

Categories						Confirm			
f0	f1	f2	f3	f4	f5	f6	f7	f8	f9
Statistics	Adult	Child	OAP	Progs	Cancel	Enter	OK	NO	End day

Figure 1

Figure 2

Figure 3

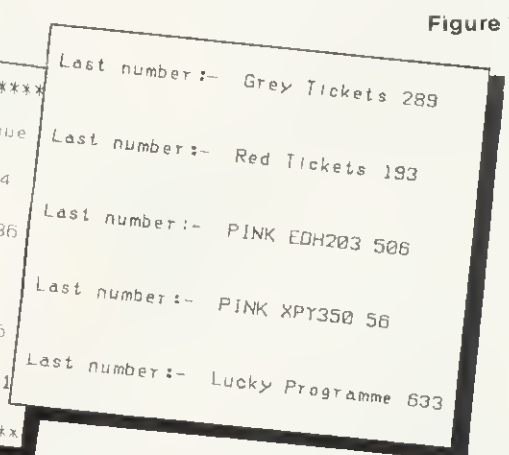

Figure 4

pressing: Adult; Adult; Adult; Child; Child; OAP; Progs; Progs.

As the keys are pressed, the appropriate costs are shown and totalled. Mistakes can be rectified by pressing 'cancel' and starting again. If the group has been entered correctly the operator simply presses 'enter'. The computer then asks the operator to confirm the entry. All confirmations are answered with either OK or NO.

The computer then helps out with the adding up by inviting the operator to type the cash given. Once this is done and the 'enter' key pressed, the program calculates the change and asks for confirmation. NO results in this section restarting, while OK lets the printer produce tickets, and returns to the entry screen.

If at any time the current totals are required (except during a transaction) the operator simply presses 'statistics' and this presents the latest totals. The totals in the number column do not include the number of programmes sold, though the total income does include the income from programmes. Pressing OK moves back to the entry screen.

At the end of the day, 'end day' is pressed. This prints out a copy of the statistics page (figure 3) and asks for confirmation to end the program. Pressing NO returns the program to the entry screen, while OK ends the program.

Finally, it is worth explaining that costs can be altered simply by changing line 490. All costs are in pence except the stats screen,

which is in pounds.

At many fetes, raffles take place for any number of things from food to computers. This often produces a multiplicity of effort, in tearing off stubbs and pulling numbers from hats (or other objects). If the ticket numbers or programmes are numerically sequenced, there is no reason why the Beeb shouldn't pick out the lucky number. Program 2 is a short example of this. It could even be used after program 1 providing the draws were made at the very end of the fete. Load and run the program. Answer the first question, by typing in the serial number of the tickets, and/or the colour. Remember that the program works with lucky programmes also, simply by typing a comment such

as 'White Programme'. Follow on by typing the number of the first programme or ticket sold, and the last one sold. Pressing the space bar now will start the random selection. After 10 seconds the program will select the winning number and the display will freeze until the space bar is pressed. After this, the program waits until you decide if another draw is required, then ends, or repeats accordingly. Users with printers available could record the winning numbers by adding lines:

235 VDU2
245 VDU3

which could lead to a printout as in figure 4.

Application of the computer to jumble sales can be easily performed by amending program 1,

in the case of stalls with few different items; or by more conventional methods for stalls with many products. I don't intend to go into program production for each stall, but I would suggest readers be very sure of what they require before coding a suitable program.

Some sideshows at fetes aim to entertain, and here the BBC micro can add to the enjoyment. We are going to concentrate on two aspects of physical activity, which can be produced with the help of the BBC micro and a shoestring budget.

These two activities require a small hardware add-on, which can be made for a few pounds. It is simply a pair of hand grips connected to the analogue port.

BES

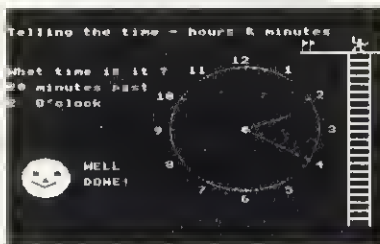

Bourne Educational Software

HAPPY NUMBERS

Uses full colour graphics to present attractive images to encourage children to learn their numbers and count. No reading skills required for this very easy to use program.

- Children encouraged through attractive flower collection and happy/sad face responses to their entries.
- Full use of sound reactions, but only with correct answers!
- Incorrect entries show equivalent number, then original entry counts to correct number. Records every entry to identify problem figures.

Suitable for 4-6 year olds and BBC Model B.

TIMEMAN ONE

TIMEMAN ONE

Children will love learning to tell the time and set the clock with TIMEMAN ONE. Right/wrong answers shown by happy/sad faces and figure climbing up (or down!) ladder. On completion of each stage the figure dances a jig to a tune and plants a flag.

Choice of any one of progressive stages comprising:

- Telling hours • Telling minutes • Telling hours and minutes
- Setting hours • Setting minutes • Setting hours and minutes
- Attractive use of sound, but level adjustable. • Children shown the correct answer after each wrong entry, and the chance to try again. • Features full BES MONITOR - records individual childrens' separate entries. • Ability and needs easily identified, practice at specific stages can then be chosen.

Ideal for 4-9 year olds and BBC Model B.

WORLD-WISE

Two programs enabling children to build up fascinating information banks on their favourite geography subjects. Covers both UK and World in a series of 10 categories including, e.g. canals, towns, antiquities, etc. Your atlases and reference books well used as they try to find a river that passes through the Equator, or who built the Parthenon! Features:

- Powerful review/edit facilities to correct entries if required.
- Save and load the data at any time.
- Personalised responses with attractive sound.
- Maintains extensive information on individual childrens' entries.

Suitable for ages 7-15 and BBC Model B.

**DISKS
NOW
AVAILABLE**

WORDHANG

Educational version of 'hangman' word game, with full colour graphics and simple but attractive screen layout. Children no longer find learning to spell a chore as they try to keep him alive! Host of attractive features include:

- Lists totalling 260 words to suit reading age/subject. Facility to create and save own lists - ideal for that weekly spelling list!
- Time limit can be set for each guess.
- Monitors individual childrens' performance - time taken, list used, correct/incorrect attempts, etc.

Suitable for ages 5-13 years and BBC Model B.

QUALITY EDUCATIONAL PROGRAMS

"... already proving very useful and popular... envisage being widely used by children." Mr I. Wilson, Headmaster, Weybridge C.E. Middle School.

AVAILABLE FROM GOOD BBC MICRO DEALERS

BES, Dept AU6, Bedfield Lane, Headbourne Worthy, Winchester, Hants SO23 7SQ. Tel: (0962) 882474 **BBC**

ANIMAL/VEGETABLE/MINERAL

Think of an object and see if the computer can guess it correctly! Children love 'educating' the computer as it fails to get the answer right.

- Stimulates fascinating (and educational!) discussions as to the difference between alligators and crocodiles, and whether oil is vegetable or mineral.
- Encourages use of reference books as children try to find the answers to their own questions.
- Maintains full information on individual childrens' entries.

Suitable for ages 7-13 years and BBC Model A and B.

All programs feature explanatory booklet. Postage and packing FREE. For 24-hour despatch by first-class post, send cheque to BES now!

Figure 5 shows the finished product. Construction is left up to the individual user, but the main components are shown in table 1. The handgrips shown are from two old soldering iron stands, but large metal bolts would do just as well. The diagram is shown in figure 6 and it is possible for the resistor to be located inside the ADC connector.

WARNING! As usual, neither the author nor *Acorn User* can accept liability for harm caused to users who connect this apparatus to a dangerous voltage supply. The ADC connector in this application will apply a potential of approx 1.8 volts. This is normally safe, and the unit has been used frequently by the author and other people. However, larger voltages could prove dangerous, and mains voltages are inevitably lethal. Please ensure your ADC reference voltage is about 1.8V before connecting this appliance.

Soldering at the connector is usually done quickly, while a good deal of heat may be required at the gripping end. With bolts, two nuts may be used to sandwich the wire.

Now let's use this apparatus for a test of strength. Well, actually, the program measures body resistance. To cut down the effects of moist palms, the program is automatically calibrated for each person. There is enough of a relationship between strength and hand resistance for the results to produce heated discussion by competitors.

When you load and run the program, the screen displays a meter marked from 0 to 10, and gives instructions for calibration. Once the grips are placed on the open palms the space bar is pressed and the program calculates a handicap for the present gripper.

It measures and displays the strongest grip, until the grips are released. The program also comments, occasionally none too pleasantly, about the user's strength.

If the maximum strength exhibited is in the 'big grippers' table, he/she can record his or her name for others to wonder at. The program then cycles back to the start for the next candidate. (At a recent fete, this program drew many entries at 5p a go from a large group of teenagers keen to outdo each other.)

It is possible to turn the strength test program into a 'passionometer', a particularly useful exercise at parties. The main program is identical, but a few lines are

altered. Once users are au-fait with the strength program, using the passionometer becomes easy. The basic difference is that each person in the couple holds one hand grip, and in addition the couple hold hands. Leaving loose of a partner's hand indicates that the 'kissing' has stopped.

Again suitable comments are made by the micro, and the 'intensity of kiss' is displayed for all to see. Program 4 contains only the changes to program 3. No lines need removing, though two need adding. Line 555 is particularly important as it scales the 'strength reading' into a 'kiss factor'. It may need adjusting for the average passion level of your local couples, but whatever happens, it will be amusing.

Program 4. Kissometer additions

```

One of the most innovative business programs on the market. Replaces a manual cash book system, e.g. Simplex and 'All-in-One'. Written by practising Chartered Accountants, this practical program is simple to use and will replace your manual cash and bank records. By giving you access to vital management information as and when you want it, it will enable you to keep more positive financial control of your business.

The software is extremely well and lucidly documented, and Gemini provide a full technical back-up and product up-date policy. Take a look at the information this program will provide:-

- Summary of VAT information for VAT returns
- Cumulative receipts and payments report analysed over the standard profit and loss and balance sheet headings
- Option for departmental analysis of sales and purchases
- Audit trail printout of all transactions.
- Journal routine for entering transfers between accounts and year end adjustment for debtors, creditors etc.
- Trial balance at any interval
- Interfaces to 'Final Accounts' program to produce balance sheet and trading and profit/loss account etc.
- Spectrum version may be used with Sinclair OR 80 column printer.

FINAL ACCOUNTS PROGRAM FOR BBC 32K, TORCH, SPECTRUM 48K £59.95

Requires Cash Book module. This program will take your cash book data to the logical conclusion of balance sheet, trading and profit/loss account and notes to the accounts i.e. fixed assets, land and buildings and capital accounts. Final accounts (BBC version) links to 'Beebplot' for graphic data presentation. Format: Torch disk, BBC disk/cassette, Spectrum cassette.

Special Offer - Cash Book and Final Accounts together - £95

"Gemini's range of software is in the vanguard of the releases for 'serious' micro users. . ."
(WHICH MICRO AND SOFTWARE REVIEW)

INVOICES AND STATEMENTS . . . £19.95
Compatible with most micros. See table. Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations include VAT automatically, and the program allows your own messages on the form produced. This program gives you superb presentation and saves time on one of the most tedious tasks in the office.

COMMERCIAL ACCOUNTS . . . £19.95
Compatible with most micros. See table. A gem of a program, all for cassette, with the following features:- Daily Journal. Credit Sales. Cash Sales. Credit Purchases. Purchases—other. Sales Ledger. Purchase Ledger. Bank Account. Year to date summary. A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

MAILING LIST . . . £19.95
Compatible with most micros. See table. A superb dedicated database to allow for manipulations of names and addresses and other data. Gemini's unique 'searchkey' system gives you a further ten 'user-defined parameters' to make your own selections. Features include the facility to find a name or detail when only part of the detail is known, it will print labels in a variety of user specified formats.

1 DATABASE . . . £19.95
Compatible with most micros. See table. The program that everyone needs, the most valuable and versatile in your collection. Facilities include sort search, list print if required. Can be used in place of any card index application; once purchased you can write your own dedicated database to suit your particular needs with a limitless number of entries on separate cassettes.

STOCK CONTROL . . . £19.95
Compatible with most micros. See table. Dedicated software with all that's necessary to keep control of stock. This program will take the tedium out of stock control and save time and money. Routines include stock set up, user reference number, minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more.

HOME ACCOUNTS . . . £19.95
Compatible with most micros. See table. Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P., etc. This program also allows you to plot graphically by Histograms your monthly outgoings.

WORD PROCESSOR . . . £19.95
Compatible with most micros. See table. This program features routines found in much larger and more expensive packages with a typical word length of 5-6 letters it allows for around 1000 words in memory at one time. Ideal for the user who requires a simple program to write letters on his computer. Features include, block delete, block insert, search and replace, edit text, display text and more.

"Simple to use"
"Ideally suited to the way most offices run. . . ."

Without any programming knowledge at all, you may:

- Set up a computerised spreadsheet, with chosen row and column names.
- Specify formulae relating any row or column to any other.
- Enter your source data and have the results calculated.
- Save the results on tape (or disk - BBC) for later reloading and manipulation.
- Print the tabulated results in an elegant report format.
- Experienced users may access saved files and write their own reporting or graphics presentation programs for the results.

Some typical applications: -

- Small business accounting applications, e.g. profit and loss statements and cashflow projections, break-even analyses etc.
- Investment project appraisal - anything from double glazing to oil rigs!
- Comparing rent/lease/buy options.
- Processing the results of scientific experiments or field studies.
- Engineering calculation models.
- In fact, anything that involves repeated re-calculation of results presented in tabular or spreadsheet format.

BEEBLOT & SPECTRUMLOT £19.95 **NEW**

Important new additions to the Gemini family. Present numeric and string data together in easily-understood pie chart, histogram or graph format. Beebplot has a built-in interface to Beebcalc, and both Beebplot and Spectrumplot have built in interfaces to the Final Accounts program of Cashbook. The facility for mathematical function

plotting is also provided. The BBC version has a high resolution screen dump for the Epson or CP-80 printers, and the Spectrum version dumps to the Sinclair printer via the 'copy' key. A very useful program that will give superb results either from direct input of data from the keyboard or via simple access to other software data files. A must for business and education.

THE 40/80 DISC SOLUTION

**Rupert Howell
gets around the
problem of
copying 40 track
software onto 80
track discs with
two 80 track
drives**

OWNERS of 80 track drives will almost certainly have discovered how difficult it is to copy 40 track software onto 80 track discs particularly when no 40 track drive is to hand. Program 1 overcomes this problem by reading alternate tracks of an 80 track drive to enable it to copy 40 track discs. The program requires a dual 80 track disc system and creates an 80 track disc from a 40 track source disc, altering the catalogue as appropriate so space is not wasted.

Once you have loaded the program insert the 40 track source disc in one of the 80 track drives and an 80 track disc in the other. The program requests the drive number to copy from (0 to 3) and a drive number to copy to (0 to 3); it then automatically copies the contents of the 40 track disc onto the 80 track, and changes the catalogue to specify that the remaining half of the disc is free. Make sure you put the correct disc in the correct drive - and that the 40 track disc is write-protected to avoid disasters.

Screen mode 7 is automatically set so the program can dimension a large array (W%) which it uses to buffer the data read from the disc. After being given the two drive numbers, it copies the 40 tracks of information to the destination disc in blocks, using procedures SETLEN, READ40 and WRITE80.

First, SETLEN selects the

Program 1.

destination drive and uses an operating system call (OSWORD A=&7E) to set the size of the destination drive on the disc by poking the W% buffer, which resides in Basic memory. (This will eventually be written to the disc, freeing the rest of the disc space.)

Then READ40 reads a number of tracks (NT%) from drive DR%, track TR%, starting at sector SC% for

NR% sectors and stores them in W%. In this procedure, the track number is multiplied by two (line 430) to simulate a 40-track drive.

WRITE80 simply writes the track buffer to the destination drive without modification.

The function FND, used by the latter two procedures, calls the disc filing system to command the 8271 floppy disc controller chip to perform a variety of functions: it

takes two parameters, the command number and an argument.

Errors are trapped in READ40, WRITE80 and SEEK. They produce the standard error codes in the same way as the DFS.

The program will operate on model Bs with series one MOS and any DFS.

This is the 40 to 80 solution, can anybody supply the 80 to 40 answer?

AMS announce the 3" disk drive

Simply plug in—ready to run

* Format and verify utilities on disk or EPROM

* Interface cables

* Manual

* Free disks

* 100k—£225

* 200k—£399

Includes VAT and delivery to your door

NB When used with some computers, both drives and disks have a double density capability. Educational and institutional orders welcomed.

The neatest and best disk option ever

We've taken the brilliantly engineered and proven Hitachi 3" drive and housed it in rigid steel, textured and coloured to match your BBC Micro. And we've added cables, manuals, utilities on disk and EPROM, free disks—everything you need to upgrade your machine.

Japan, home of the major disk drive manufacturers, has decided to make the new 3" disks a standard. And no wonder. Not only are they strong and easily stored, they give 100K per side, and you simply flip them over in the same way as a music cassette. The small light on the casing reminds you which side you are using. The disk is totally encased in rigid plastic, with no exposed surfaces, is easily inserted with one hand and simply removed by pressing the eject button. A unique feature of the new disks is a mechanical tab which prevents overwriting of precious data. And of course, you can switch it back when necessary.

Reliable and Robust

The Hitachi drive boasts a brushless direct drive motor, the best possible system for trouble-free use. AMS-3 units simply run off the BBC power supply—they don't need their own supply and there's no need to worry about corrupt data.

The standard interface lets you use the disk drive with most other computers and in tandem with 5¼" drives.

High Speed Access

The disk drive provides a track-to-track access time of only 3mS, much faster than old-fashioned drives.

Reliable delivery

You can now order your AMS-3 by mail order direct from Advanced Memory Systems Ltd. The units are delivered by courier service, complete with everything you need to get started. Just plug in the cables, and away you go.

Fill in the coupon below and we will send it to you with our full no-quibble money-back guarantee. Advanced Memory Systems Ltd, Woodside Technology Centre, Green Lane, Appleton, Warrington, Cheshire WA4 5NG.

* Disk drives supplied by Hitachi Europe Ltd. RING (0925) 62907, 24-HOURS.

TO: Advanced Memory Systems, Ltd, Woodside Technology Centre, Green Lane, Appleton, Warrington, Cheshire WA4 5NG.

Please send me by door-to-door courier:

.....(qty) AMS-3 (S) single disk drive at £225 each with free disk.

.....(qty) AMS-3 (T) twin disk drives at £399 each with two free disks.

(Prices include EPROM, utility disk, cables, manual, VAT and delivery).

Please send me by post, if not with drives:

.....(qty) double sided (100K x 2) disks at £4.95 each.

.....(qty) packs of five at £22.50 per pack

.....(qty) utility EPROM at £15.

ARE YOU OUT OF THIS WORLD?

SOFTWARE PROGRAM WRITERS

SILVERSOFT want to hear from you...

We are looking for out of this world, original, creative arcade action games utilising cosmic graphics written for any of the popular range of home computers.

If you think the games you have invented would challenge other space travellers contact:

Dougie Bern at SILVERSOFT LIMITED, now,
London House 271/273 King Street London W6
Telephone: 01.748 4125.

SILVERSOFT

ELECTRON

SON OF BBC MICRO

Paul Beverley finds out what Acorn's new machine can do, and how similar it is to the BBC

WHAT follows is not really a review of the Electron, but rather the results of playing with a field trial machine provided by Acorn. Also, there are one or two details not yet finalised, and no doubt modifications will be made to the operating system before the launch.

Obviously we will make comparisons with the BBC micro, but not with other micros. No doubt there will be plenty of other people to do that! The aim here is to give a few facts.

To say the Electron measures 340 by 160 cm probably does not give you much real idea of its size, but figure 1 might. As you can see, it appears the Electron is all keyboard, and not much else. The size has been kept to a minimum by having an external mains transformer, integral with the mains plug. Unfortunately, this is so large that on some double mains sockets there is not enough room to use the adjacent socket.

Inside the case there are two circuit boards – one for the switched-mode power supply and the other for the computer itself, the

two being separated by a partition which gives the case extra rigidity. Power from the transformer enters on the right side, and along the left side are cassette socket and connectors for outputs to an RGB monitor, a black and white monitor, and a colour or black and white television. (The sockets are clearly labelled – on the underside of the case!) The only other output is an edge connector in a recess along the bottom edge of the back of the case.

The main board contains a 6502A microprocessor running at 2MHz, two 16k memory chips (Basic in ROM and operating system in EPROM), four RAM chips (32k total), nine simple TTL chips, a quad operational amplifier chip, a handful of discrete components and last, but not least, a *huge* ULA!

The keyboard is a full QWERTY version, with full depression keys, but they don't seem such good

quality as on the BBC micro. There are 55 keys (compared with 73 on the BBC), but they are well used, and the only functions not included are tab and shift lock. What is more, there is an extra facility. Of the 55 keys, 29 can be used for entering whole Basic keywords, such as REPEAT, INPUT, PLOT etc. This is done by the FUNC key, which is used rather like CTRL or SHIFT. For example, <func> A, produces AUTO, <func> C, produces COLOUR, and <func> R, produces RUN with a carriage return.

However, if you have got into the habit of using abbreviations don't worry – they are all exactly the same as in BBC Basic. And the Basic chip bears a remarkable similarity to that in the Beeb. As with the Beeb's function keys, you have the alternative of using them for the entry of single characters, including user-programmed characters.

Although the Electron does not have the ten red function keys, the same facility is provided by using the FUNC key in combination with the number keys 0 to 9. This reduces the key count by 10 and

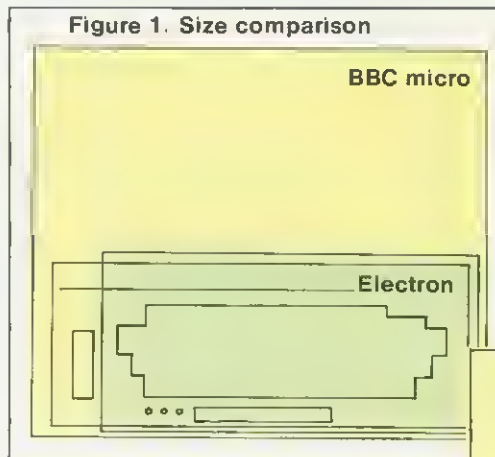

produces exactly the same effect as the BBC's function keys.

Screen editing is identical to the BBC, using cursor keys along with the copy key, and here again there is a saving on the number of keys. In this case it has been done by combining the cursor and copy keys with the five keys adjacent to them on the BBC. To get the two characters on each of these keys instead of the normal editing functions, they are used in combination with either the SHIFT or CTRL. One minor gripe here is that COPY is above RETURN key, and then, where a BBC user would expect to find COPY is the DELETE key! This can be frustrating, and a menace in an environment where Electrons are used alongside BBC micros.

*KEY10 will program the BREAK key and *KEY11 to 15 the cursor and COPY keys. This means any software written for the BBC which relies on function keys, can run on the Electron. Another single key saving has been made by combining the 0 and @ characters.

One of my main concerns is interfacing, and in this respect I am a little disappointed in the Electron. Apart from the cassette socket and the various output display devices, the only other form of interface is an edge connector which provides address and data lines for hardware, such as a printer interface, user port, Econet interface or perhaps a modem. Unfortunately, no information was given about this in the provisional manual. The only clue is that the operating system can access pages &FC00, &FD00 and &FE00. &FE00 to &FE07 are used for addressing registers in the ULA, but as well as FX calls 150 and 151, they seem to have implemented (but not yet documented) FX calls 146 - 149, associated, in the BBC, with Fred and Jim - the 1MHz bus.

Whilst mentioning the edge connector, it is worth making two comments about its design. First the good news . . . at each end of the recess in the back of the computer is a huge bolthole so add-on units can be securely fixed. Now, the bad news . . . if you leave a metal object lying on the table behind the computer (in my case a jack plug provided with the cassette lead), it can go underneath the edge connector and short out

the power supply! It wasn't until the second time this happened that I realised what was causing the machine's demise.

The power supply is designed so that although it does not seem to suffer any long term damage by being shorted out, it stays dead until left switched off for several minutes.

Not surprisingly, the Acorn designers have gone out of their way to make the Electron compatible with the BBC micro. This can be seen by comparing the two memory maps - and they look identical. First, there is 32k of RAM and 32k of ROM. The ROM consists of 16k of Basic and 16k of operating system. Of the RAM, 3¼k is used by the operating system, and ¼k is kept for the user's machine code routines, so Basic programs normally start at &E00 as they do on the BBC. The remaining RAM is used to provide program and data storage and graphics.

The Electron has seven of the eight modes provided by the BBC microcomputer - the only one missing being mode 7 - the teletext mode. The graphics are identical with the BBC (OS 1.2) so that you have at the one extreme mode 0 which provides a resolution of 640 by 256 in two colours, and then trading off the resolution against the number of colours, you can go to mode 2 with a resolution of 160 by 256 in 16 colours. Two of the modes, 3 and 6, are text only, being 80 characters and 40 characters respectively by 25 lines. If you need graphics but only want to use 10k of RAM for the screen then modes 4 and 5 provide either 2 or

4 colours, with a resolution of 320 by 256 or 160 by 256 respectively.

On the BBC micro, graphics are provided by a standard CRT controller chip - the 6845 - plus a ULA to extend the controller's memory range and provide a colour palette. It was this ULA which gave problems in the early stages of development of the BBC micro.

Figure 2. Comparison of speeds of BASIC U (Timings are given using the onboard time

	BM1	BM2	BM3
BBC micro	0.64	2.8	8.0
Electron	0.86	3.7	10.7
Drop in speed (%)	34	32	34

Acorn's designers were trying to include more and more functions within one ULA, and in the case of the video ULA were pushing it to the limits of its specification by running at 16 MHz to get the necessary resolution in mode 0.

The Electron ULA not only contains the colour palette circuitry but also the CRT controller action

of the 6845, although without the 6845's full programmability. For example, there is no facility for sideways scrolling by reprogramming the 6845. This means programs such as *Rocket Raid* and *Planetoid* which rely heavily on sideways scrolling, although they run on the Electron, produce a garbled screen. Also some games such as *Snapper* make use of hardware timers in the second 6522 VIA on the BBC micro and will not run properly on the Electron without external hardware, again since there is no 6522 VIA, and for the same reason, there is no user port. The lack of 6522s also means internal timing has had

to be taken over by the ULA. The ULA also contains control circuitry for the cassette interface which makes it a busy little chip! Actually it's not so little – it's a 30mm square 68-lead ceramic package.

The two machines are compatible as far as the cassette interface is concerned, so programs from the BBC can be loaded into the Electron and vice versa. The Electron will not load at 300 baud; it accepts *TAPE3, but continues to load and save at 1200 baud. Once programs have been loaded, many will work directly on the Electron provided they use the operating system commands. (Beverley's on his hobby-horse again!) Hobby-horse or no, if you have written your programs using the operating system commands, they will transfer straight to the Electron without modification! If programs use mode 7, they are run using mode 6 and will usually run out of space because of the 7k difference.

One sad omission is the absence of sideways ROMs, though the operating system software can cope with serial cartridge ROMs. These would presumably be mounted in one of the extension modules. However, it is worth noting that if you take out the Basic chip and put in a different language, the Electron seems quite happy. For example, View and Computer Concepts Beebcalc both run on the Electron, although Wordwise does not since it relies on mode 7.

Where the Electron's hardware does not match up to the BBC, as much as possible has been done to avoid it causing errors. For example, a program which calls for mode 7 doesn't produce 'Bad mode', but sets up mode 6 and does the best it can to obey PRINT instructions. (For example teletext double height characters are printed twice!)

There was little in the field trials manual about FX calls, but a few hours digging un-earthed the calls in figure 2. Naturally those calls concerned with the A to D converters or the RS423 serial interface have not been implemented, but most of the others have. Again, compatibility allows

SI (using the P.C.W. bench marks.
(time clocks.)

AT LAST, A COMPLEX GRAPHICS SYSTEM, THAT'S SO EASY TO OPERATE

...IT'S PROFESSIONAL CAPABILITIES COULD BE UNDER ESTIMATED

P.L. DIGITISER SYSTEM™

The PL Digitiser System enables you to reproduce complex pictures and diagrams, or produce original designs, quickly, easily and accurately.

The package consists of the 'Graphics Digitiser' incorporating a tracing pad (mapped out by rectangular grid) 256mm x 205mm and the 'Control Program' (tape or disc). This includes such features as automatic parallel, vertical, horizontal or diagonal lines, construction of boxes and circles from two probe positions, free hand draw, fill and outline, move and scale, immediate edit and the ability to save completed screens as files or reproduce by line printer.

B.S. DOLLAMORE LTD.

Burton Road, Burton-on-Trent, Staffs., England (0283) 217905

U.K. Distributor

Scientific House, Bridge St., Sandiacre, Notts. Telephone: (0602) 394000.

DON'T BUY! an expensive digitiser or graphics package, until you've seen...

EASY GRAPHICS

Easy Graphics makes the graphics facilities on your B.B.C. micro (32k) easily accessible, even to non-programmers. All commands are entered from the keyboard, and allow you to draw maps, graphs, technical drawings, computer art, even animated pictures.

Here are some of the features:

- ★ Draw lines (any thickness), boxes, circles, ellipses, arcs, and many more.
- ★ Measure distances and angles, find x,y coordinates.
- ★ Full cursor control, including on/off and variable speed.
- ★ Fill or shade any shape.
- ★ Change colour and/or palette, dozens of extra colours + shades available.
- ★ Change mode (works in modes 0, 1, 2, 4 or 5).
- ★ Auto repeat facility (probably the most powerful feature).
- ★ Amazing rubber band (helps with perspective).
- ★ Mix text and graphics.
- ★ Save on tape and use in your own programs.

EASY GRAPHICS was originally written as a programming aid, but has now been fully developed into what is probably the most versatile graphics program on the market. Must be seen to be fully appreciated.

Includes demonstration program, program generator (allows you to redraw your pictures) and full instructions.

EXCELLENT VALUE AT ONLY £129.95

P&P included.

Write for more details or send cheque/PO to:

Includes demonstration program, program generator (allows you to redraw your picture) and full instructions.

HEXAGON SOFTWARE

17, Straits Road, Gornal, Dudley, West Midlands, DY3 2UR

Telephone: 232992.

calls such as *FX2 and *TV to be accepted, but nothing is done with them. (*FX – selecting the output channel works to some extent. That is to say that if you select *FX3,2 it disables the screen, and 3.0 re-enables it.)

Some OSWORD calls are also implemented. Certainly those which access the system time clock, the interval timer and the sound channels all appear to work normally. Also there are all the normal operating system routines such as OSFIND, OSBGET, OSCLI etc. I have not bothered to check these individually since they are called by Basic and therefore must be present for Basic to work properly.

All the VDU driver routines are implemented although VDUs 1, 2 and 3 need additional hardware and software. There are however none of the advanced graphics routines (VDU23.0, etc) used for altering the various registers on the 6845 CRT controller chip, since all these functions have now been incorporated into the ULA. This unfortunately means that although the Electron supports all seven of the modes which used the 6845 it does not allow some of the clever tricks possible on the BBC micro.

However, one of the VDU 23.0 routines has been maintained, and that is for switching the cursor on and off. It has been arranged so existing software runs normally, but when the cursor is switched off and you attempt to do screen editing, you do not get the inverted cursor which moves around the screen for copying various bits, so you have to switch the cursor back on with VDU23;1,1,0;0;0;.

Four sound channels have been incorporated into the ULA, but it will only produce one channel at a time, and the envelope command is more limited. This means programs which call the sound and envelope commands run, but do not sound the same.

As far as speed is concerned, a quick look at the results of running benchmarks (figure 2) will show the Electron apparently to be between 32% and 44% slower than the BBC. This is because of the way memory is arranged. It is too technical

to go into, but Acorn has used four 64k x1 bit chips to make up the 32k RAM to keep down the cost. This means each byte that has to be read from or written to memory has to be dealt with in two, four-bit nibbles. During such RAM access, the processor clock is effectively stretched to 1MHz – the same technique as used on the BBC for the 1MHz bus. Thus if you look at benchmark 8 which deals with arithmetic functions, you will see it is noticeably slower than other benchmarks since it makes so much use of RAM while doing its calculations.

So what about graphics? Yes, you've guessed it – this is where you see why the Electron is less than half the cost of the BBC model B. The speed of the graphics routines is reduced not only because of the slow access to RAM but also because they have done away with the 6845 CRT controller chip (a good example of the so-called 'software/hardware trade-off'). How slow? Well on average, programs with a lot of graphics take between two and three times as long as the same program run on the BBC micro computer. Persian (*User Guide*, p46) for example, takes 108 seconds on the Electron as opposed to 44 seconds on the BBC – a factor of 2.45.

It seems therefore that the Electron is basically a cut-down version of the BBC model B. That is to say it has 32k of RAM, but does not have any of the following facilities:

- RS423 interface,
- analogue to digital converters,
- 1 MHz interface bus,
- Tube interface,
- printer port,
- user port,
- sideways ROMs
- 300 baud option on cassette interface,
- mode 7

However, it does have the added facility for single key entry of 29 different basic keywords, in addition to the 10 function keys, and the programmable cursor, copy and break keys. Also, all of the above items, except the last two, can be added externally says Acorn.

*FX	Function
0	Report OS version
3	Select output stream
4	Change effect of copy and cursor keys
9	Set flash rate (mark)
10	Set flash rate (space)
11	Auto repeat delay time
12	Auto repeat interval time
13	Enable various events (all work except AOC and RS423 events)
14	Disable various events
15	Flushes a given class of buffer
18	Empties user key buffer
19	Waits for vertical sync pulse
117	Reads the VOU status byte in the X register
118	Uses the sign bit of X to indicate if CTRL is pressed
129	Read a key with a time interval
130	Read machine high order address
131	Read top of RAM address
132	Read bottom of display RAM address
133	Read lowest address for a particular mode
134	Read text cursor position
135	Read character at text position
136	Motor control
137	Insert character into a buffer
138	File options
145	Get character from a buffer
146	Read from page &FC
147	Write to page &FC
148	Read from page &FO
149	Write to page &FO
150	Read from page &FE
151	Write to page &FE
181	Read flash (space) time (set by FX10)
182	Read flash (mark) time (set by FX9)
211-214	Set effects of CTRL-6
225	Set base for f0 - f9
226*	Set base number for <func> A - P
227*	Set base number for <func> Q - /
242	Reads cassette motor status

Figure 3. List of FX calls which work on Electron OS 0.31 (* – calls which are extra to the BBC OS).

BEEBTAPE

THE COMPUTER MAGAZINE ON A CASSETTE!

AIR TRAFFIC CONTROLLER

Experience the tension! Get nine aircraft safely down on the fogbound runway before time and fuel run out. A realistic simulation of an air traffic control situation. Includes radar and flight data displays. For the Model B.

THE BANK MANAGER

Worried about the impact of microcomputing on your bank balance? Trying to work out if you can afford that disk drive? THE BANK MANAGER handles income, expenses, standing orders, etc easily and simply and keeps track of your spending.

CALORIE COUNTER

A boon to weight watchers! CALORIE COUNTER contains details of almost two hundred basic foods and calculates the calorie content of your meals quickly and accurately.

How much would you expect to pay for ready to run software like this? Two pounds? Four pounds? Eight pounds? Well, as part of a subscription to BEEBTAPE each of these programs costs around 70p. They're just three of the programs published in issue four of BEEBTAPE along with more software, hints, tips, news and views. Previous issues contain more games, utilities, business and educational software. Backnumbers are available.

BEEBTAPE is published six times annually and a year's subscription is just £21 or £30 if you want it on disk (any format).

BEEBTAPE gives a new meaning to value for money. We bring you MORE value for LESS money or you can have your money back!

Small School Study Packages are designed to a high specification by a team of experienced teachers and programmers for use both at Home and in School. Based on the well established techniques of individualised learning schemes, the Packages consist of a structured suite of objective matched computer based lessons, review program and Post Test, using to the full the capabilities of the 88C Micro.

All packages are supported by a Manual containing package description, user notes, exercise material etc.

Titles include:

The Theorem of Pythagoras (Model B) – Designed to teach the Theorem of Pythagoras and its applications, the package consists of a suite of 5 lessons, Review and Post Test with diagnostic plus Manual.

First Steps in Algebra (Model B) – Designed to introduce experimentally, using animated graphics and 'mapping machines', simple operations and the use of variables leading to the solution of simple linear equations. The Package consists of 5 lessons, Review and Post Test plus Manual.

Mental Arithmetic Tests (Models A(32K) & B) – Designed to help implement the recommendations of the Cockcroft Committee that there be frequent practice of Mental Arithmetic, the Package provides Tests at 7 levels and 3 degrees of difficulty and is aimed at youngsters from age B to 14, covering most areas of basic numeracy. The Package contains two versions, one for Class use, the other for the individual student at Home plus the Manual. A Tables Practice program is included.

All Packages are priced at £6.95 inc.

But send for a full description and list of titles available and in preparation to:-

Small School Software, 41, Sinah Lane,
Hayling Island, Hampshire PO11 0HJ.

Excet Measuring Unit

SOFTWARE SUPPORTED MONITORING INSTRUMENT—BBC MICRO

Enables the 88C (8) to measure and display accurately:

POSITIVE & NEGATIVE—VOLTS * AMPS * WATTS
OHMS * TEMP * LIGHT * TIME

FEATURES

Up to 6 simultaneous readings
Graphical or digital display
Auto scaling and labelling
Plots any 2 variables
Menu driven options
Full software support
Unlimited choice of scales
Event analysis facility
Teaching display Mode

RANGES

Temp - 10 to 110 deg C
Resistance 0 to 1E6 ohms
D.C. Volts 40v.p.d.
D.C. Current 0 to 2000 mAmps
Power 0 to 80 watts
Light 0 to 100 (uncalibrated)
Time 0 to 1E6 secs (hrs mins secs)
Accuracy: error generally < 1 per cent

£77.50

Includes instrument, temperature probe, light sensor, electrical probes (3 sets), leads, connections, software on cassette, full instructions, application notes, p8p

excet systems

16a High Street
Ilfracombe
North Devon

BBC SOFTWARE

Quality software produced by professionals and used in hundreds of schools throughout Great Britain

FUN WITH WORDS B £8.00

Start your fun with alphabet puzzles in GUESS A LETTER. Continue your play as you learn about VOWELS, know the difference between THERE and THEIR and have games with SUFFIXES. After working so hard reward yourself with games of HANGMAN. Learning should be fun. The tape includes ALPHA, VOWELS, THERE?, SUFFIXES and HANGMAN.

EDUCATIONAL - 1 A or B £8.00

Hours of fun and learning for children aged 5 to 9 years. Animated graphics will encourage children to enjoy maths, spelling and telling the time. The tape includes MATH1, MATH2, CUBECOUNT, SHAPES, SPELL and CLOCK.

EDUCATIONAL - 2 A or B £8.00

Although similar to Educational-1 this tape is more advanced and aimed at 7 to 12 year olds. The tape includes MATH1, MATH2, AREA, MEMORY (Model B only), CUBECOUNT and SPELL.

GAMES OF LOGIC AND CUNNING A/B £8.00

For children and adults alike. The tape includes AUCTION, FLIP, REVERSE, TELEPATHY and HEXA 15 (Model B only).

SUPERLIFE 8 £6.90

Fast (machine code) version of a popular 'Game of Life' in a large universe.

KATAKOMBS 8 £8.00

Are you cunning enough to discover and seize the treasure in the Katakombs AND return alive? What and where are your enemies? Can you outwit them? Yes? Then your adventure will take you through unending forests, besides tumbling streams, over lonely plains to desolate ruins and finally underground to the tortuous Katakombs.

UTILITIES A/B £8.00

Behind the mundane title lies an assortment of useful procedures and functions which can save you hours/days of programming effort: date conversion, input and validation routines, graphic routines (cube, rectangle, etc), sorts, search and many more.

★★★ SPECIAL OFFER ★★★

CHECK OUT DISC DATA ENTRY

TAKE a blank formatted disc, type in listing 1 and run it. Note that you get an error. Wipe the disc clean with *ENABLE followed by *DESTROY**.

Now change line 30 to PROCTEST ("TEST2", 20) and re-run. No error this time.

The error in listing 1 can be explained as follows. When TEST1 is saved, 60 disc sectors are reserved for it. However, it takes up very little space. When ANOTHER is saved, it is placed in the sector directly following the end of TEST1.

When an attempt is made to save new data under the old file name TEST1, the disc operating system automatically allocates the space occupied by the old data in TEST1. However, this is less than required for the new data, and so a

'can't extend' error results. Changing line 60 to:

```
IF D%=10 THEN F=OPENOUT(A$)
ELSE F=OPENIN(A$)
```

(or in Basic 2, OPENUP(A\$)) doesn't help.

This problem is most likely to occur when the program user is allowed to name his own files. There are two solutions. First, don't allow the user to save data under a file name which already exists. Listing 2 illustrates how to do this.

Second, delete the file with the same name before saving the data. Listing 3 illustrates this approach.

Some commercial programs may not cater for this problem. When testing a piece of software which allows you to name your own disc files, test it in the manner of listing 1.

IAN BIRNBAUM sets out to improve your programming techniques on the BBC micro.

He will answer reader's questions in this column and develop their ideas - as well as giving some of his own. But the real aim is for readers to provide the questions and the answers.

At least £5 will be paid for any tip published, with £10 for those which merit a one-star award and £20 for real humdingers!

The idea must be original and be described clearly and fully. It should not have been published before.

Your contribution should be typed or printed, with any substantial listings on cassette, but only included to make a point.

Send your hints or questions to BBC Forum, Acorn User, 53 Bedford Square, London WC1B 3DZ. Please include a self-addressed envelope if your contribution is to be returned. We cannot answer letters individually, but a cross-section of common and interesting points will be covered.

SYNCH DELAY BY

CHRISTOPHER FEWSTER

£10

IN ANSWER to Paul Hopkins (April Forum), listing 4 will cause the computer to wait until the next synchronisation pulse occurs.

However, on operating systems after OS 0.1, this can be accomplished by a call to OSBYTE with the accumulator containing 19. The program is run and then, when the routine is needed, CALL or JSR WSYNCH. This routine works on the principle that whenever a vertical synchronisation pulse occurs, bit 1 of the register at &FE4D is set to 1 (bit 0 and bits 2-7 signal other interrupts). When WSYNCH is called this bit is continually tested (lines 60 and 70) until a synchronisation pulse is detected. As there are 50 of these each second, the routine operates very quickly.

If notification is required of each pulse, then, as far as I am aware, either OS 1.0 or 1.2 is required. The pulses can then be detected using even handling. After *FX14,4 the operating system indirects via &220 whenever a vertical synchronisation pulse is detected. Using the guidelines set out on page 465 of the *User Guide* the necessary routine can be written and the contents of &220 and &221 altered to point to its start.

KEEPING SECRET DATA BY NIGEL BEASLEY

WHEN writing quiz programs for schools or adventure games it is annoying if the user can simply look at the data statements and work out the answers. The following procedure will cause the information following a DATA statement to disappear when the program is listed.

When writing the program, put a space as the first and last pieces of data in the statement, eg:

```
10 DATA (space), Oxygen, Xenon, 3, (space)
```

When the program is complete type in listing 5 and press return after each line.

Then list your program, and the text or figures following the data statement will have disappeared! The data can still be read as normal, but take care because the first and last bit of data in each line will be the instruction to turn output to the screen on and off. This can be overcome by simply reading these commands into a string variable and ignoring them.

The program works by putting VDU control codes into the place of spaces, which turn the output to the television or monitor on and off. VDU 21 turns output off and VDU 6 restores printing (*User Guide* pages 380, 382). The correct place to put the commands is found when a unique pattern of numbers occurs in memory and the commands are inserted. The code to do this is put high in memory to avoid interference with other programs.

INVISIBLE KEYS

BY BOBBY HESSELBO

FUNCTION keys can be programmed to carry out a set of instructions without them being seen on the screen. Precede the instructions with !E!R!C!@ and end them with !D!M. For example try

```
*KEY0!E!R!C!@ X%=X%+1:
P.X%!D!M
```

in any graphics mode.

The control codes are equivalent to VDU5 : GCOL3,0 and VDU4. Hence, text is plotted in logical colour zero in the exclusive - OR mode.

Listing 5. Hiding data

```
MDDE 7
TX=TOP
P%=PAGE
PAGE=&7000

10 FOR AZ=P% TO TX
20 IF ?AZ=220 AND
AZ?1=32 THEN AZ?1=21
30 IF ?AZ=32 AND
AZ?1=13 THEN ?AZ=6
40 NEXT
RUN
PAGE=P%
```

KEYS AND BUFFERS

BY ALEXANDER SELBY

THE *User Guide* says the extremely powerful facility of inserting keys into the buffer is limited to the 1.0 operating system, but using listing 6, keys can be inserted on a 0.10 machine.

All you have to do is, having initialised the machine code in line 10, set \$&930 equal to the string you want inserted, and CALL INSERT. Control characters can be accessed using the I on the top right of the keyboard as with function keys. The buffer has a maximum capacity of 31 characters.

Listing 6. Keys into buffer with OS 0.1

```
10 P%=&900:[OPT2::INSERT:LDX#0:
.L%:LDA&930,X:CMP#13:

```

TAPING SCREENS

BY ANTHONY ROBINSON

IF YOU have created stunning artwork on the BBC micro and want a permanent record, the simple routines below will load and save a screen onto tape.

```
10 REM LOAD SCREEN
20 VDU 21
30 *LOAD SCREEN
40 VDU 6
```

```
960 REM SAVE SCREEN
970 VDU 21
980 *SAVE SCREEN SSSS
FFFF
990 VDU 6
```

Where SSSS, the start address, is the value of HIMEM in hex (given by PRINT ~ HIMEM).

For the different modes, the value of SSSS is given by:

Mode	Model B	Model A
0,1,2	3000	-
3	4000	-
4,5	5800	1800
6	6000	2000
7	7000	3000

For a model A, replace FFFF by 4000, and on a model B by 8000.

The screen saving routine should be placed in a Basic program to run once the screen has been completed. The program will pause at line 980 until the return key is pressed, so allowing the tape to be positioned before recording starts.

VDU 21 and VDU 6 disable, and then enable the VDU drivers so the message 'record then return' and the file name are not printed on the screen, or dumped to tape.

Microware presents the latest news on BBC.

N.B. 40/80 Format Switch – call for information

Reports are coming in that Microware, the authorised dealers for BBC and Epson, are being inundated with orders and enquiries from BBC micro owners. It is believed that this unprecedented

COLOUR-FILL GRAPHICS

Interactive computer painting is much in vogue in advertising and television where expensive hardware is used to generate images from scratch, or enhance them. The technique uses a lightpen, or similar device, to select colour from a menu and 'paint' on the screen. In this sense, the lightpen replaces the artist's brush, and can even simulate the texture of brushstrokes.

All this may sound very exotic and expensive, but the BBC micro can imitate these systems. The basic requirements of interactive painting are: to define or draw outlines (*Acorn User*, June); to colour these regions from a menu of colours.

The colour photos with this article show convoluted regions being filled by different colour fill algorithms. Another requirement is to be able to extend the colour range available on a device by mixing or 'dithering' colours, as shown in the dragonfly illustrations. A later article will deal with mixing and drawing using a joystick to produce these pictures.

This article will examine how to fill regions using just flat colour. Four algorithms are presented, two use a queuing technique and two use recursion (July issue). It is worth reiterating that BBC Basic is, as far as we are aware, the first dialect of this language to implement recursion.

Filling the interior of a closed region can be done using the triangular fill facility (PLOT 80-87). However, not all closed figures can be easily filled using this as the computer must have detailed knowledge of the shape of the region being plotted. For example, to fill any regular or irregular polygon, given an ordered sequence of vertices, we can use the simple expedient of moving to any point within the interior before plotting to each vertex (figure 1). Colour fill then proceeds at the same time as tracing the boundary. Life becomes more complicated, however, when such a figure contains a hole or concavities. We end up with a filling technique that depends on the shape of the figure. Imagine

Jim McGregor and Alan Watt explain colour fill routines and give several examples, including the new PLOT commands

Figure 1. Plotting and filling a polygon using triangles

Figure 2. Colour fills must cope with convoluted regions

trying to define a sequence of triangle filling operations that would colour the castle pictured.

Anyway, in interactive painting the outline will have been drawn before the colour fill takes place and clearly we want to be able to fill any region no matter how convoluted (figure 2). Such algorithms allow us to draw a closed region and select a colour to fill it.

Algorithms that fill the interior of

any closed figure are sometimes called 'flood-fill' algorithms and work by assuming the region to be filled is delineated by a boundary of pixels in a non-background colour and that the interior of the region is '4-connected'. This means all pixels within the region can be reached one from the other by a sequence of any of the movements up, down, left and right.

There are two approaches to this problem; one is recursive, and the other uses a FIFO (first in, first out) queue. The simplest colour fill algorithm we can design is recursive. We start from an arbitrary point working outwards to adjacent points, eventually visiting the whole region (algorithm 1). If, however, you insert the procedure in a program, it will work only for very small regions. For larger regions, the program will terminate with the error message 'no room' because a long sequence of recursive procedure calls have been entered and not yet terminated.

To see how this happens, look at the configuration of pixels shown in figure 3. If we start the fill process by calling PROCfill from with parameters that specify pixel 1, the tree of procedure activations shown in figure 4 is created. This process will continue and as the pixels in the region are visited, the tree of procedure activations will get deeper and deeper. A procedure call will be terminated only at a dead end, for example at pixel 4. Each time a procedure is activated, storage space is used up for holding parameters, local variables and a record of where to return to when the procedure is terminated. This space is freed only when the procedure terminates.

There is thus a limit to the depth to which the recursion can be extended, and for a region of any size the limit will soon be encountered. Notice also that in this example when a long chain of recursive calls is eventually terminated, most of the other recursive calls that then take place will be unnecessary and will terminate immediately. This redundancy is, however, necessary if

the algorithm is to cater for a convoluted region. With a large memory the simple recursive algorithm might be usable, but on a micro, it is unsatisfactory.

Algorithm 2 is non-recursive and uses a FIFO queue. This is shown in the course of filling our castle, although we have only included a pair of circles in the program that drives the algorithm.

Filling proceeds with 'diagonal wavefronts' and the algorithm is a little more complex than the first. PROCfillfrom is initiated from a start point which is coloured and added to a queue (by calling PROCfill). PROCfillfrom then repeatedly takes the first point from the queue and examines each of the neighbouring N, S, E and W points (by calling PROCfill for each in turn). Each time PROCfill is called, it colours the point given (if not already coloured) and adds that point to the end of the queue. Adding to the queue in this way ensures the point will subsequently be removed from the queue and its neighbours examined.

The reason the queue is made a FIFO is to ensure duplicated points are quickly removed to prevent the queue becoming too large. If for example we made the queue an ordinary stack (LIFO or last in first out) it would gradually grow and run out of memory.

For the queue, we use two arrays, one for x-coordinate and one for y-coordinates. Two variables indicate the positions of the 'first' and 'last' items in the queue. The arrays are treated as circular, so when the end of the queue reaches the end of the arrays, the queue is 'wrapped around' and continued into the free space at the start of the arrays. PROCfillfrom repeatedly takes the next point from the queue until it is empty. Although algorithm 1 only works for small regions and algorithm 2 is slow, both are worthy of study because of their simplicity.

A common provision in graphics systems that operate with a raster scan display (eg a TV) is a horizontal fill facility. This will typically be given the (x,y) coordinates of a point and will colour-fill pixels to the left and right of the given pixel as long as these pixels are in the background colour.

Algorithm 2. Single pixel FIFO queue

Mixing colours extends the range available. In this case, three shades have been mixed in mode 0

operating system did not provide a horizontal fill, but this was rectified in later versions with a new set of PLOT instructions.

Algorithm 3 uses recursion again and also uses the new feature of OS 1.2. Because the recursion operates on 'units' of lines rather than individual pixels, the algorithm can be implemented on micros. Note from the colour illustration that the filling now proceeds with 'horizontal wavefronts'. As we have seen already, the simple recursive approach leads to problems involving the depth of the recursion and the queue method is preferable. However, a recursive

approach is possible for moderately sized regions. Although this also involves a new problem with recursion, this can be easily overcome. Incidentally, you should not be impatient if this algorithm appears to stop without filling the complete region. The recursive procedure calls take time to 'unwind'.

First, we present a Basic procedure that implement a horizontal fill without the new PLOT commands. The method is vital for OS 0.1 and can be seen as an explanation of using the new PLOT facilities presented later.

A call of PROCfillalong will first

colour-fill to the right of the given pixel until a non-background point is encountered. The same is done to the left. Both scans are carried out using the subsidiary procedure PROCdirectionfill whose parameter 'dir' indicates the direction of the scan. As a result of calling PROCfillalong, the two non-local variables 'leftx' and 'rightx' are set to values indicating the extent of the strip that was filled. The value of 'xstep' will indicate the width of a pixel which will depend on the graphics mode. For example, in mode 1, 'xstep=4'. PROCfillalong is called from PROCfillfrom which is given a point, and starts by filling

These pictures show a complete colour fill; algorithm 2 in action (note diagonal wavefronts); algorithm 3 as sky is coloured with horizontal wavefront; algorithm 4 (note difference between action of 3 and 4)

the horizontal strip in which the point specified by its parameters lies. It then calls itself recursively to fill from each pixel above and below the strip just filled. In this procedure we have committed the venial sin of using a GOTO. We would like to write the main loop as:

```
FOR scanx = leftx TO rightx
  STEP xstep
  PROCfillfrom(scanx, y + ystep)
  PROCfillfrom(scanx, y - ystep)
NEXT scanx
```

but this will produce the error message 'too many FORs'. This is because a recursive procedure call

```
200 DEF PROCfillfrom(x,y)
210 LOCAL leftx,rightx,scanx
220 IF POINT(x,y)>0 THEN ENDPROC
230 PROCfillalong(x,y)
240 scanx=leftx
250 PROCfillfrom(scanx,y+ystep)
260 PROCfillfrom(scanx,y-ystep)
270 scanx=scanx+xstep
280 IF scanx<=rightx GOTO 250
290 ENDPROC
300 DEF PROCfillalong(x,y)
310 LOCAL nextx
320 PROCdirectionfill(x,y,xstep)
330 rightx=nextx-xstep
340 PROCdirectionfill(x,y,-xstep)
350 leftx=nextx+xstep
360 ENDPROC
370 DEF PROCdirectionfill(x,y,dir)
380 nextx = x
390 REPEAT
400 PLOT 69,nextx,y
410 nextx=nextx+dir
420 UNTIL POINT(nextx,y)>0
430 ENDPROC
```

Algorithm 3a. Horizontal line fill using recursion

```
300 DEF PROCfillalong(x,y)
310 PLOT 77,x,y
320 X%=CPblock : Y%=CPblock DIV 256
330 A%=&0D : CALL &FFF1
340 leftx=(!CPblock AND 65535)
350 rightx=(!(CPblock+4) AND 65535)
360 ENDPROC
```

Algorithm 3b. Using the new PLOT77 command in PROCfillalong

is appearing inside a FOR statement and any FOR statement entered during a recursive call behaves as if it was inside the outer FOR statement. The FOR nesting limit is 10 which is soon encountered. Also presented is an alternative version of PROCfillalong that uses PLOT 77 for horizontal fill, now described. The statement PLOT 77, x, y scans left and right from the pixel specified by x and y until it reaches the last background point in both directions. A line is drawn between the two points reached. The rightmost point becomes the 'current graphics point', and the leftmost one the previous graphics point. We now need to set 'leftx' to the x-coordinate of the previous graphics point and 'rightx' to the x-coordinate of the current graphics point. For this we use the OSWORD call at lines 320 and 330. This uses a block of store declared at the start of the program by:

```
5 DIM CPblock 8
```

You need not understand the details of OSWORD. The above version of PROCfillalong is exactly equivalent to that described earlier, although faster.

It is worth mentioning briefly another PLOT command that could be used to speed up execution of the loop in PROCfillfrom (lines 250 to 280). The statement PLOT 92, x y searches pixels to the right of (x,y) for a background point and sets the last non-background point reached as the current graphics position. Use of this in the last algorithm would reduce the delays while the recursion 'unwinds'.

Finally, note that all recursive fill algorithms can run out of room for large or highly convoluted regions. The horizontal fill methods described here could all be reorganised to use a queue. This approach is taken in algorithm 4 which also makes use of PLOT 92. Note the difference in filling patterns between algorithms 3 and 4.

McGregor and Watt's new book, *The BBC micro book: Basic sound and graphics* has now been published by Addison-Wesley at £7.95

INNOVATIVE BBC SOFTWARE

from the professionals

SHUTTLE

This program is a highly accurate computer simulation of the flight of the Space Shuttle Columbia from the initial countdown through the launch period, the launch itself and into a stable orbit. The craft may be manoeuvred within the orbit and then dropped out to finally fly through the atmosphere to a safe touchdown.

The attraction of this simulation is its authenticity. So far as is possible, it follows the actual parameters of the first Columbia flight with only one or two minor exceptions. The shuttle, of course, starts its flight pointed vertically into the sky and carries a huge fuel tank to provide the fuel for its three main engines in addition to the solid fuel rockets which provide the major thrust to lift it off the ground. Two minutes into the flight the rockets are jettisoned, having burned all their fuel. The count-down for take off starts at T-20 seconds. At T-10 seconds the shuttle motors start firing, but the shuttle remains tethered until T=0. When the shuttle blasts off, the pilot must guide the craft into its orbit by controlling its attitude and track. A number of guidance controls are supplied, together, of course, with control of the shuttle motors' thrust.

The simulation may be started at one of three points in time: either at take off, at a point where the Columbia is in a stable orbit round the earth, or finally, prior to landing. Measurements of speed, fuel and so on may be selected for either Metric or Imperial measurements. All of the physical forces which acted upon the actual flight are taken into account. One departure from fact has been included in that the two solid fuel rockets have had their thrusts increased from 26 to 36 million Newtons so as to give the pilot an increased latitude for error. In other words to make the take off easier.

A fascinating program, the more so because it follows fact so closely. Available for the Model B

RANDOM ACCESS AND BASIC II

THIS article deals mainly with disc systems. Although tape can be used to hold data, it suffers from several failings. First, it is only practical to use one file at a time. Second, speed of access is slow and, perhaps most importantly, only sequential files can be used.

As an example, consider the simple problem of how to hold a name, address, and phone number in a file as A\$, B\$, and A%.

One option is to use a so-called sequential file, where the sets of data are saved in turn: thus PRINT# X%,A\$,B\$,A%. (X% is the channel number explained later.) Some form of loop and data statements could set up the file, or a simple routine of inputs, followed by PRINT#. This, however, has several drawbacks. To find one of these sets means going through the whole lot until the correct one is found. Changing one set or part of a set causes chaos—the whole file needs to be loaded, the correction made, and then all saved again. This is necessary because the data is packed together; if one item is lengthened it will overwrite the next, if it is shortened, an error will occur when trying to read the next item. Simple variables such as A\$ are no longer acceptable; to hold all the data in memory, dimensioned variables are needed, with a dimension at least equal to the number of sets of data.

This last point moves us to another problem, memory space. A lengthy program, one with a lot of data, will soon run out of memory in anything other than mode 7. But there is a way round many of these problems—random access files.

Random access files store data on the disc in a set format. This is established in advance, usually based on the longest likely string. Consider how data is stored on a disc. Real variables (eg A, PHONE) are stored in six 'bytes', &FF, followed by the five bytes of its value. Integer variables are stored as five bytes, &40, plus the four byte value. Thus both forms of numeric variable are of fixed length.

Richard Harris puts the record straight on file handling and the new Basic

String variables are held as &00, then a byte equal to the length of the string, then the string itself. Thus string variables are the difficult ones! Note that it is the storage pattern which would cause an error if sequential file strings are shortened. The interpreter would expect &00, &40 or &FF to follow, depending on which sort of variable came next. If a byte of an incorrect value is found, a 'type mis-match' error results.

Let's take an example for string variables. It might be that 30 characters is chosen as the maximum name length for a string variable and 80 for the address. With the sets we need, the strings take 80+2 and 30+2, whilst the number takes five bytes. This is a total of 119 bytes per set—not ideal, but more on that later.

Now for the most important feature of random access files. It is possible to move a pointer to any position within that file, and load data from that point; this assumes the first byte pointed to is the correct one of &00, &40 or &FF as previously explained. Thus any one set can be picked out by moving the pointer in multiples of 119, starting at 0, not 1. Indeed only one item need be read, if the pointer is moved a further 32, then 82 bytes. Just as important is that any one item can be changed, by moving the pointer to the correct point and printing the new value. Numeric variables are no problem as long as a real variable is not written to a place formerly an integer! The only proviso is that strings do not exceed the set maximum length. If they are shortened no problems arise; the length byte is changed accordingly.

The overall advantage of this is that the size of the program is of much less concern, and the amount of data irrelevant, assuming the disc has enough capacity. This allows space to write a long 'user friendly' program.

We can now have a brief look at what the various Basic commands do. The first one needed is OPENOUT;

```
X%=OPENOUT("address")
```

X% is the channel number given to a file which the operating system has made available for data. Up to five files can be used at any one time—trying to open more causes an error. OPENOUT opens a new file and if a file of that name already exists, it is deleted. A file name (in this case address) is entered into the disc catalogue and 64 sectors of the disc are reserved for that file. If 64 consecutive sectors are not free an error results. The only exception is when a previous file is deleted; the length of that is used. Now, 64 sectors is equal to 16k bytes, so if two files are opened, they will be 64 sectors apart. Note, however, that as soon as the file is closed any unused sectors of those 64 are free for other files, more on this later.

OPENOUT also sets two further Basic keywords, PTR# and EXT#;

```
PTR# X%=119*n
length%=EXT# X%
```

X% is again the channel number. PTR# is how the pointer referred to earlier is controlled. Thus if n=1 in the above example, the pointer will be moved to byte number 119 (the 120th byte, since 0 is the first). EXT# holds the current length of the file; after OPENOUT it will be 0, since no data has been saved. It is *not* set to the end of 64 sectors; they are only reserved for use if wanted. Thus PTR# is used to move around random access files, whilst EXT# can rest whether the end of a file has been reached, or will be reached. For example:

```
IF (PTR# X%)+119 > EXT# X%
THEN ...
```

AID at last!

Assembler Interactive Debug for your BBC Micro with DUALSCREEN**

*Essential for beginners

*Invaluable for experts

AID is a unique machine code environment for the BBC micro which brings the user friendliness of BASIC to the world of machine code.

Capable of supporting the development of the most advanced machine code programs it is also the essential companion to the complete beginner. No more do machine code programs have to 'die' leaving you to hit the Break key and wonder what happened. AID will execute them an instruction at a time if necessary, simultaneously displaying a disassembled program listing together with the changing registers in the processor. For the experienced programmer AID provides a first class monitor with a host of advanced facilities to cut program development time. Single stepping, breakpoints, register and memory modification and a unique code insertion feature for advanced applications. Pins of course DUALSCREEN - simultaneous support of your program screen and AID's debugging screen.

- 28 commands
- Integral disassembler and hex character dump
- Breakpoint and program counter position indications. Automatic disassembly from program counter at AID entry
- Up to 12 simultaneous breakpoints. Breakpoint list facility. Resume, remove, break, and Continue (leave but do not place) from main
- Previous and current processor status displays. A x y 5 and PC registers plus flags
- Single stepping of programs with cyclical disassembly from previous, current and destination instruction addresses. Automatic illegal instruction stop
- Mode 7 screen with processor status display (triple disassembler display region, conditional line, repeat line and AID message line)
- DUALSCREEN - automatic recovery of program screen from program entry and user command
- Auto memory after processor registers or other flags
- Entry by CALL from BASIC program or command level. Clean return to BASIC program at the breakpoint interrupt
- Reliable with AID's own loader
- Tested with OS 1 and 1.2
- Comprehensive user guide

DUALSCREEN is the unique feature of AID which makes it stand out from all other debugging programs. AID recognises that most programs drive graphics displays, and that an essential part of the debugging process is to be able to monitor the screen as the program executes. AID automatically saves and restores your program screen whenever AID is entered either at CALL from BASIC or at a machine code breakpoint, before initialising its own mode 7 screen. Then when you return to your program AID automatically re-establishes your program's current screen whatever the mode. This superb facility achieved with only 1.5K additional screen data memory makes AID the most powerful monitor available for developing machine code graphics!

The most advanced machine code A.I.D. yet for aspiring machine code programmers or experts!

Another keyword is provided to detect the end of a file, EOF#; eg

```
REPEAT... UNTIL EOF# X%
```

EOF# returns a true value when the end of the file is reached, otherwise a false value is returned.

A further variety of OPEN is available, which seems to be the cause of most confusion, called OPENIN. Note that OPENUP in Basic II is exactly the same as OPENIN in Basic I. Basic II has also got OPENIN, but with a different meaning. First, OPENIN/OPENUP again assign a channel number to the named file; they do not create a new file. Each of these commands allows previously-saved data to be read or changed. They also allow extra data to be added to the end of the file. OPENIN sets PTR# to 0 but EXT# is now set to the length of the file.

In theory there are no restrictions on extending a file except the size of the disc. In practice, a file can only be extended up till the next one. If a program is saved immediately after a data file, no extension is possible unless the program is deleted. If unlimited extension is needed, a blank disc should be used initially, and nothing else saved on it (or *COMPACT used). If more than one

file is needed, all should be OPENOUTed together (which will space them 64 sectors apart) and then nothing else put on the disc. Larger files can be set up with *SAVE (DFS manual).

OPENIN in Basic II only allows reading; changing or adding to the file is prevented.

The last few commands are the easiest to follow. They allow reading and writing to the disc;

```

INPUT# X%,A$,B$,A%
  inputs 3 variables
PRINT# X%,A$,B$,A%
  writes 3 variables

```

A%=BGET#X% and BPUT#X%,A% read and write one byte. With random access files the following approach is needed;

```

Y%=119*n:PTR# X%=Y%:
  INPUT# X%,A$
PTR# X%=Y%+32:INPUT# X%,
  B$
PTR# X%=Y%+114:INPUT# X%,
  A%

```

This is a simple example to cope with our data. A more complex set of read and print data sets is given by listing 1.

This is very similar to the simple example, but uses DATA statements to set the value of PTR#. The initial value of PTR# is set by the

procedure parameter. Note also the apparently wasted printing of 0 in line 100. This brings us to how the operating system works, and the final, important Basic command CLOSE#.

Data manipulation is not done directly on disc. Blocks of 256 bytes are transferred into memory, are read or changed and then printed back to the disc. The next 256 bytes are then brought into memory. This produces the greatest speed and efficiency if the data of one variable does not cross this 256 'barrier'. Indeed, sets of data should be kept within these 256 byte blocks (starting at 0), eg 64 or 128, etc, bytes per set of data. Listing 1 needs almost 256 bytes for each set; the final PRINT# X%,0 is to ensure the full 256 bytes are used and that the next set starts in the correct place.

Any changes to these 256 bytes will not be transferred to disc until the next set is read in, which would lead to problems at the end of a program, with 256 bytes left in memory. The command CLOSE# X% closes the file with channel number X%, so no further data transfer can take place; it also ensures the last 256 bytes are correctly put on disc. CLOSE# 0 closes all open files. It is essential to use CLOSE# at the end of a program, and not simply escape or break.

It is perhaps worth mentioning a further advantage of random access files. A pointer can be saved with each set of data, which if loaded into PTR# points to the next related set; thus an alphabetical series (for example) can be obtained quickly without having to enter the sets in order.

A few final points on data storage. First, the operating system contains routines to do all of the above from machine code. However, with programs highly dependant on disc access, the disc transfer rate is usually the limiting speed factor. If very fast sorting from disc is needed, a different approach must be used. *LOAD and *SAVE move data much faster to and from disc and could be used to put a large block of data into memory. This does have problems though, particularly of memory size (again!) and ease of manipulation.

When all the cowboys have gone

Kansas will still be here!

The **Cowboys** easily recognisable by their exaggerated claims, low prices and usually private address. Which means very amateurish programs rather badly produced and just nothing like what you expected, that is of course if you are lucky enough to get a copy which will load in which case try and get it replaced...

How different with **Kansas**. For starters we've been in the publishing business from this address for 25 years. But what's more we are the longest established software publishers in the business, and as such will still be around long after most of today's crop of cowboys are long gone, which of course we will have to be to stand by our guarantee!

The **production** is on the finest equipment available, and actually being able to record a copy on each side of the cassette at different levels, so to suit the wide variation of automatic gain controls in cassette players - which is why **Kansas** programs load!

The **product** is professional—with printed labels and inlay cards in colour.

The **service** is the best in the country. Every order is cleared the very same day it is received, whether cheque or credit card, and despatched by our private Post Office collection at 4.30 every working day. All first class and by the quicker metered mail.

Back-up There is always someone on hand should you have any difficulties or need any advice.

But best of all is our guarantee. Should a program fail, your fault or ours, it will be replaced absolutely free of charge, this year, next year or in ten years... It's guaranteed for life!

This level of service can only be given direct. **Kansas** programs are therefore not available in shops They can however be purchased 'over the counter' at our Stand at all the major exhibitions

JUST RELEASED—A brand new Adventure

The Ring of time

Legend tells of a time-ring belonging to Zor, an evil magician of the Middle Ages. Your task is to find it.

Adventurers will find this new one from **Kansas** more difficult than the **Dracula Island Adventure**, with some unusual twists and very tricky situations.

Again it is a traditional Adventure, completely logical of course, with all the normal ingredients, with the many objects and locations always in the same places and the objects remaining where they are dropped.

Crocodiles, mad monk, cowled figure, skeleton and the like, together with the vortex all make your journey more difficult, if not downright impossible!

The **Ring of Time** is our second in the **Kansas** series for the BBC Micro, and a natural progression, being just so much more difficult and involved.

But for those who become completely stumped, we operate a 'Help' service, with either a little or a lot of help being given over the telephone...

£9.50 all inclusive

If you are a newcomer to Adventures, these are purely logical games which can take weeks to solve. **Dracula Island** (£9.50) is a good starter

BBC OWNERS

Why not consider the HOBBIT FLOPPY TAPE SYSTEM for your computer?

The HOBBIT gives you all the facilities you would expect from a floppy disc at a fraction of the price.

"The HOBBIT takes the drudgery out of using cassettes and with its excellent performance outshines any cassette recorder I have seen." *Personal Computer News*.

Brief Specifications

- ☆ Read/Write speed of 750 BYTES per second
- ☆ Capacity: 101K BYTES per CASSETTE
- ☆ Average access time 22 seconds
- ☆ Up to 138 FILES per CASSETTE
- ☆ Completely automatic – no buttons to press
- ☆ Fully built, boxed and tested. Just plug in and go
- ☆ System can support TWO DRIVES

Available from stock **PRICE £135.00 plus VAT**

Also available for NASCOM computers **PRICE £120.00 plus VAT**

£3 p&p. Access and Barclaycard accepted

EuroCUBE 6502/6809

One small Eurocard - more computer than ever

EuroCUBE is just one, small 100 x 160mm Eurocard but it is an Industrial Computer of exceptional power and versatility.

The user has a choice of 6502 or 6809 microprocessors. Programs can be developed on a full CUBE development Eurorack or on any other microprocessor development system in a high level language such as Industrial BASIC or machine code.

EUROCUBE has four memory sockets whose function and position in memory is fully user selectable. For example, the first socket might contain a 4KB operating system EPROM, the second a BBC BASIC interpreter in ROM, the third the user's BASIC program in whatever size EPROM is convenient, and the fourth might contain 8KB of battery backed non-volatile CMOS RAM.

An on-board calendar clock is also supported by the battery, and provides the time of day to 1/10th second and the date correct for the whole century.

EUROCUBE communicates with the outside world through 20 digital i/o channels, RS423/RS232 serial port and the full CUBE/Acorn data bus through which the entire CUBE/Acorn range of video, disk, analog, solid state switches and other peripherals can be controlled.

COLOUR & PATTERN DUMPS

George Hill takes you step-by-step through to producing hard copy of colour screens

In a previous article (*Acorn User*, June) screen dumps of the on/off type were covered. The following conventions used then will be continued here:

- 'byte' will refer to the byte being built up to send to the printer;
- X and Y (and X% and Y%) will refer to screen coordinates;
- x and y (and x% and y%) will refer to small variations in X and Y while building up printer bytes.

The problems of mode 0 dumps and of 'colour', or more accurately 'pattern' dumps, are closely allied. They arise from the number of dots

necessary to give full screen coverage.

The X direction in mode 0 has a resolution of 640 pixels per line, while the resolution in the Y direction is only 256 pixels per column. A printer with fewer than 640 dots per line will have to print the picture 'sideways' (figure 1). This might indicate that we can print a full screen dump with only 256 dots per line, but distortion would result because mode 0 pixels are rectangular. To illustrate this, try program 1. The horizontal line is twice as wide as the vertical one. Thus we need two dots per

pixel in the Y direction, and one dot in the X direction. This needs a minimum of 512 dots per line from your printer. Seikosha owners cannot obtain a full dump of the mode 0 screen in a single scan. The solution in these circumstances is either to split the screen, and dump it in two halves, or to miss a bit off.

When designing screen dumps it is helpful to draw a diagram of the screen, in the orientation in which it is to be dumped. Its corners are labelled with their coordinates, which makes writing the controlling X and Y loops much simpler. Figure 1 illustrates the two obvious choices of orientation, referred to as plan A and plan B respectively.

Plan A will be scanned by a loop:

```
FOR Y=1023 TO 0 STEP -N
FOR X=0 TO 1279 STEP M
NEXT: NEXT
```

Plan B is scanned by:

```
FOR X=0 TO 1279 STEP N
FOR Y=0 TO 1023 STEP M
NEXT: NEXT
```

In mode 0, it is necessary to repeat a dot in the Y direction. This is usually easier to accomplish on the 'dot-band' printer using plan B.

There are inevitably special cases, so general programs are less easy to write. Two typical printer oddities are the Olivetti's ability to print twice as many dots in the vertical direction as in the horizontal, and the Seikosha's seven-dot wide bar. The dumps used to illustrate mode 0 printing are for Olivetti and Centronics 739. (For the latter I am indebted to Iain Cameron from Inverness.)

In program 2, the Olivetti dump, lines 1000 to 1010 set up the printer to dump the whole screen. CONTROL, which is sent to the

Beeb Calc

The ROM based spreadsheet program

BEEBCALC

Following on from WORDWISE this ROM based spreadsheet program is extremely simple to use though still very powerful. For applications that require a 'spreadsheet' or a table of figures to be manipulated this ROM will be invaluable. It need not be limited to just the obvious business applications of financial planning but is also ideal for home budgeting, etc. Includes many special features such as the ability to transfer 'sheets' to WORDWISE for inclusion into reports. 40 or 80 column screen display, changeable column widths etc.

WORDWISE

The renowned word processing package. Still clearly the market leader with sales now over 10,000, this has become "the standard" word processor for the BBC Micro — and it's still receiving very favourable reviews. Wordwise will work with tape, disc or Econet and includes automatic word counting and full control over text entered into the system. Supplied with a detailed spiral bound manual and an excellent free typing tutor program.

After 6 months on the market there is still no other product as simple to use and as powerful as Wordwise.

ANDROID ATTACK

A brilliant new game. The quality of the graphics and the smooth animation make this game unsurpassed. You are in the middle of a maze being chased by various androids. your only weapons are your hand laser and a quantity of land mines. These can be dropped at any point in the maze and later detonated under remote control. Beware of the "Smiley" master android and watch your oxygen levels — the lower the level the slower you move. Many different skill levels and a high score table. This is how "SNAPPER" should have been.

printer via VDU1 at line 1010, sets the vertical resolution to one (the last figure in inverted commas), and defines the picture to consist of 32*8 dots horizontally (256 double-width dots for the Y axis), and 80*8 dots vertically (the 640 small dots for the X axis). The screen is scanned, building printer bytes in the conventional fashion, in lines 1012 to 1021.

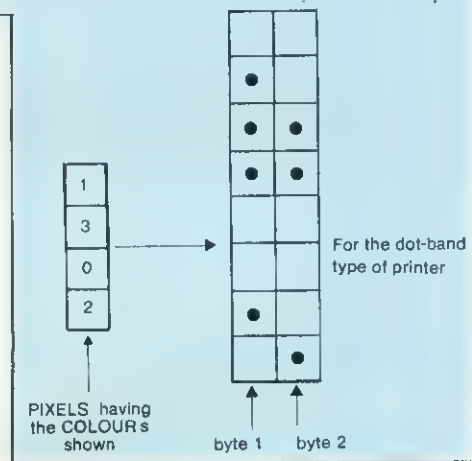

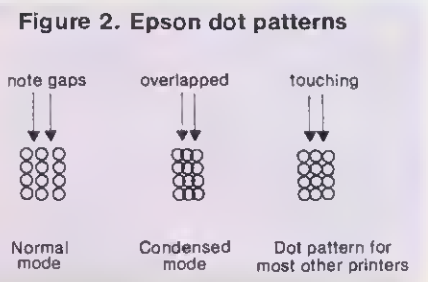

In program 3, the Centronics dump, (presented as a procedure), the printer is set up in lines 1000 to 1050. The escape sequence merely sets the printer into graphics modes. The screen is scanned in lines 1070 to 1180. Notice the adjustment to byte at line 1140, as the Centronics graphics characters start at 32. Line 1150 sends the byte to the printer twice, giving double dots in the Y direction, to account for the rectangular pixels. Line 1170 sends the carriage return to the printer (code 13 is not recognised as a graphics character by this printer).

The 'fiddle' necessary for the Seikosha is present in the 'pattern' dump printed later in this article, and readers should be able to write their own mode 0 dump using the same principle.

At this point it is opportune to introduce 'the Epson problem'. Readers with MX80FT - type printers will be wondering why they produce oval circles in simple dumps. The reason is that Epson have used an asymmetrical dot matrix, in which spaces between vertical dots are different from those between horizontal dots. In normal print mode (corresponding to 480 graphics dots per line) the horizontal spaces are bigger than the vertical ones. In condensed mode (960 dots per line) the situation is reversed (figure 2). A satisfactory solution in mode 0 is a

ELECTRON BOOKS from Addison-Wesley

See us on
Stand 10 at
the Acorn User
Exhibition

To coincide with Acorn's official launch of the Electron at the Acorn User Exhibition, we are bringing out two exciting new books for an exciting new machine, with more to follow later.

START PROGRAMMING WITH THE ELECTRON

Masoud Yazdani and others

Although one copy of this book will be supplied free to everyone buying an Electron, many will want extra copies, so read on ...

Entering the world of personal computing with this book is rather like asking a friend who knows their way around computerland to hold your hand and give you a guided tour. Although the writing style is relaxed and informal, the book does follow a well-structured approach which owes more than a little to Seymour Pappert's philosophy of learning.

It is written in English rather than 'computer-talk', and there are glossaries of BASIC keywords at the end of most chapters for quick reference. The book gives you enough information to get you started in programming independently, without losing you in a maze of technical information that you really don't need at this early stage. Another benefit is that it helps you find your way around the mass of information in the User Guide and begin to find out how the system works by carrying out experiments.

Contents:

- Introducing the Acorn Electron
- Writing a song
- Talking to turtle
- Playing with numbers
- Structured problem-solving
- Helping turtle in a maze
- Input and output
- Collections of objects
- Have a chat with your micro
- Sounding out your Electron
- Pretty pictures
- Computer games

Included at the back are complete listings of the programs used in the book, so you can start programming on your new micro right away.

August 1983 0 201 14604 5 £6.95

THE ELECTRON BOOK: BASIC, Sound and Graphics

Jim McGregor and Alan Watt

From the authors of The BBC Micro Book comes this complete beginner's handbook to the brand-new Electron. It gives you everything you need to know to transform your new micro from an inert box to an exciting box of tricks ...

First, there is a thorough introduction to BASIC programming on the Electron, with clear and simple explanations of all the terms, so that you can begin writing your own programs at a very early stage. Then you're treated to over 150 pages on the Electron's sophisticated sound and graphics capabilities, with illustrations and sample programs to try throughout.

So by the end of the book, you'll be fully equipped to invent and play your own computer games, write and play music, and produce animated graphics - all in the comfort of your own front room.

Contents:

- Communicating with your programs
- Doing calculations
- Choosing alternatives
- Loops
- Statements within statements
- Handling lists
- Procedures and functions
- Special effects with characters and strings
- Graphics
- Sound
- Animation

Appendices

August 1983 0 201 14514 6 £7.95

THE ELECTRON TAPE: BASIC, Sound and Graphics

For the less nimble-fingered, we're also producing a cassette tape of all the program listings in the book, which will be available either separately or as a complete pack with the book.

Watch your local computer store for more information on these and other forthcoming books and software for the Electron and the BBC Micro, or send for our new Microcomputing Catalogue now!

plan B dump, similar to program 3. The printer is set to condensed graphics, 768 dots per line, and byte is printed three times instead of two. The 'problem' works to our advantage in 'pattern' dumps which follow, as it allows us to use a three by two matrix for patterns, giving more variety than the more normal two by two matrix. The oval circles become round in these dumps.

Simple on/off dumps are less than satisfactory in use with colour graphics, as they cannot distinguish between, say, red and yellow which look very different even on a black and white screen.

Modes 1, 4 and 5 will handle four-colour modes which are returned by the Basic function POINT(X,Y), as the numbers 0,1,2 and 3. (VDU 19 does not affect these values.) For normal pattern dumps (ie non-Epson) we can represent these by the dot patterns in figure 3. There is more freedom on the Epson, typical patterns being shown in figure 4.

Information about a single pixel will be carried in two printer bytes, (three for the Epson), whether in plan A or B. For the 'dot-band' printer, plan A is easier. There will always be a fiddle necessary on any printer which prints an odd number of dots in its band (eg the Seikosha). The principle of preparing dot patterns is illustrated in figure 5.

If lines of dots are printed, it will be necessary to scan each line of pixels twice, printing different selections from the underlying patterns on each 'pass'.

There are two ways to store the patterns. The first, and more familiar to most Basic users, uses arrays. The principles were previously discussed in an article on the Epson dumps published in October's *Acorn User*, but here is a brief recap.

The patterns must be split either vertically (for the dot-band printer) or horizontally (for the line-of-dots printer). The resulting numbers will be called up in two ways:

- by whether they are for byte1 or byte2 (or pass 1 or pass 2) and
- by colour.

They are therefore stored in a two-dimensional array (figure 6). The first parameter tells whether a

Figure 7. Translating the patterns in figure 6 into numbers

Array element	Binary	Decimal
P(1,0)	00	0
P(1,1)	01	1
P(1,2)	10	2
P(1,3)	11	3
P(2,0)	00	0
P(2,1)	00	0
P(2,2)	01	1
P(2,3)	11	3

Figure 8. Storing a complete pattern as a single number

Figure 9. The information stored in 4 bytes

Figure 10. Dot patterns for the mode 2 dump

particular member is for byte1 or byte2, the second tells the colour it represents. Thus for a pixel with colour 2, we would select P(1,2) for byte1, and P(2,2) for byte2. The split patterns are translated into binary numbers, giving values for the array elements shown in figure 7.

For future expansion into assembly language, I recommend everyone to become familiar with

'byte indirection', one of the BBC's best features, derived from its Atom ancestry. First, both sections of the pattern for each colour are stored in a single byte (figure 8).

We can access the first element by obtaining $9 \text{ DIV } 4 = 2$ decimal = 10 binary, and the second by obtaining $9 \text{ MOD } 4 = 1$ decimal = 01 binary.

The patterns are stored by first

reserving space at address pattern, by the statement DIM pattern 3. This reserves four bytes for our patterns, which will contain the 32 bits of information shown in figure 9. This information is stored by the line

```
!pattern=&0F090200
```

which is the binary information translated into hexadecimal. The correct pattern for colour n is accessed by the command pattern?n. Thus (pattern?3) MOD 4 will extract the number wanted for byte1, representing a pixel whose colour is 3.

In simple dumps involving a single dot per pixel, we 'rotate' the byte one bit at a time by multiplying by 2, but in pattern dumps the

printer bytes must be rotated two bits at a time, so we multiply by 4. The Seikosha dump for modes 1, 4 and 5 (program 4) uses this approach. It is a plan B dump with the patterns stored in lines 1002 and 1003.

Line 1006 defines the top and bottom coordinates, chopping a little off each, to allow the 480 dot line length to cover most of the screen in a single scan. Line 1007 starts the scan.

Lines 1008, and 1019 and 1020 are necessary to cope with the seven-dot wide band of the Seikosha. Four pixels are read each time. When the first band is printed, the bottom dot (corresponding to the most significant byte (MSB) of the printer byte) is lost, as the MSB

must be set to 1 (line 1020). When the second band is prepared, the pixel with the lost dot is read again, but this time the other dot is removed (line 1019), before setting the MSB to 1. Thus at line 1012, x% steps alternately from 15 to 3 and from 27 to 15, reading the '15' pixel twice. Lines 1016 and 1017 prepare the bytes as indicated, and line 1021 prints them.

All simple dumps are unsatisfactory in mode 2 as the range of colours is too great for anything but a pattern dump. We need to be able to represent at least eight colours, and 16 would be necessary if all the flashing colours needed separate patterns. Fortunately, the flashing colours normally flash against a background of a

FINANCIAL GAMES

BBC Model B

THE WORLD TRAVEL GAME

1 or 2 Players,
Choice of Game,
'Exciting, Tense, Competitive and
even Educational'

★ ★ ★ ★ ★

Travel the World; Journey by air, rail and road.
Exchange currencies; Buy souvenirs; Book tickets.
Cope with hijacks, strikes, robbery and other problems
inherent with travel.

Visit countries as diverse as Russia & the Falklands.

Your aim is to collect 6 souvenirs and return to
LONDON intact!

— £6.95 —

GREAT BRITAIN LTD.

You are P.M.
and Chancellor of
'Great Britain'

You must select the Party you wish to represent and your aim is to stay in office for as long as possible. You must control inflation and unemployment, maintain the exchange rate, introduce social reforms and stay popular. The game is split into sectors: country profile, shopping basket, budget day, reform opportunities, manifesto, and most important election nights (a telling time).

A COMPLEX GAME THAT YOU WILL NOT TIRE OF IN A HURRY

— £5.95 —

INHERITANCE

Gt. Uncle Arburthnot
is dead.
You stand to inherit!!

A 2 part game. Prove your financial accumen in Part 1 by investing wisely at the stock and metal markets; if desperate try the casino or the horse races. If you are successful you will enter the world of big business in Part 2. Find the secret formula for paradise cola; manufacture and market the drink; cope with strikes, fires, frauds, cash shortages, etc. Your ultimate aim is to become a millionaire! **A MAMMOTH GAME PACKED FULL OF FEATURES**

— £5.95 —

See Reviews in:

Acorn User Dec '82 — Personal Computer Jan '83

COMPUTERCAT Quality Software BBC MICRO

TOUCH TYPIST (32K) — £9.95 *Educational and useful*

Are you a keyboard pecker? Improve your typing skills. Your computer is your tutor, monitoring and evaluating your progress. Fully documented. Many already sold to educational institutions.

OTHELLO (32K) — £8.95 *Highly recommended*

A favourite board game brought up to date with superb graphics and sound.

SNIG (32K) — £6.95 *Addictive*

Not just an ordinary snake game but a super-fast arcade type needing exceptional reflexes and co-ordination.

BOUNCE (16/32K) — £4.95 *A must at the price*

NEW and FRUSTRATING. Like all ball games it is the timing that's important. Kids love it.

GRIG BLITZ (32K) — £5.95 *Highly recommended*

A fast action arcade game with scintillating multicolour graphics and sound. DEFEND your territory by shooting down the GRIG INVADERS. Ten play levels of increasing difficulty. Are you good enough to reach level 10?

OATABASE (32K) — £12.95 *Good value*

Organise your records. Add, change, search, delete and display routines. Shell SORT. MENU driven and user friendly.

COMPENIUM (32K) — £5.95 *Three for the price of one*

4 up (Version 1), 4 up (Version 2), Poke the peg. Three board games to test your powers of logic. Four colours and sound. A challenge for 1 or 2 players.

SOFTWARE WRITERS.

EDUCATIONAL PROGRAMS REQUIRED.

Have you written any Educational Software for the BBC Micro?

YES!.

Then this column could be used in future issues to advertise your program. We are interested in EDUCATIONAL programs initially or games that have an educational aspect to them.

Just send us a copy of your program on tape and we will evaluate it, for the originality of the idea, the contents of the program, and whether it is a viable product to market.

A reply is guaranteed with an indication of how we found your program and whether we intend to market it.

Send your programs to:

DIAL SOFTWARE,

ATOMIC MACHINE CODE

A book containing 23 fully explained machine code programmes for the Atom.

DATA SORTS ● MODE 4 CHARACTERS ●
GAMES ● POOLS PREDICTION ● TOOL KIT ●

Over 50K of programmes in 1 book for £5.75 inc.
Book and Cassette (source code) £15.50.
Book and Cassette (ready to run) £15.50.
Cassette only £11.50.

ATOMIC LOAD

If you now own a BBC don't throw away your tapes, for ATOMIC LOAD allows you to load Atom tapes directly into the BBC Micro (Model B).

BBC-TYPE BASIC ● ATOMIC BASIC ● ATOMIC
TEXT FILES ● ATOMIC MACHINE CODE ●
ATOMIC DATA FILES ●

Checks for Syntax differences, checks for direct addressing of memory, disassembles machine code, and in all cases flags possible errors.

On Cassette — All this and more for only £9.75 inc.

ECCE Productions, 3/73 Station Road,
Sidcup, Kent. DA15 7DR.

GIANT ADVENTURE GAMES

1) **COLOSSAL ADVENTURE:** The classic mainframe game "Adventure" with all the original treasures & creatures + 70 extra rooms.

2) **ADVENTURE QUEST:** Through forest, desert, mountains, caves, water, fire, moorland and swamp on an epic quest vs Tyranny

3) **DUNGEON ADVENTURE:** The vast dungeons of the Demon Lord have survived His fall. Can you get to their treasures first?

Every Level 9 adventure has over 200 individually described locations and is packed with puzzles — a game can easily take months to complete. Only sophisticated compression techniques can squeeze so much in! Each game needs 32K and costs £9.90

BBC FORTH, FORTH TOOLKIT

"r q FORTH" runs on 16K or 32K BBC micros and costs £15. It:

- ★ follows the FORTH-79 STANDARD
- ★ and has fig-FORTH facilities;
- ★ provides 260 FORTH words;
- ★ is infinitely extensible;
- ★ has a full-screen editor;
- ★ allows full use of the M.O.S.;
- ★ permits use of all graphic modes, even 0-2 (just!);
- ★ provides recursion easily;
- ★ runs faster than BBC BASIC;
- ★ needs no added hardware;
- ★ includes a 70 page technical manual and a summary card;
- ★ has hundreds of users.

Level 9 Computing are pleased to announce a new toolkit for "r q FORTH" on 32K BBC micros. It costs only £10 and adds the following facilities to FORTH:

- ★ a 6502 assembler, providing machine-code within FORTH;
- ★ turtle graphics, giving you easy-to-use colour graphics;
- ★ decompiler routines, allowing the versatile examination of your compiled FORTH Programs;
- ★ the full double-number set;
- ★ an example FORTH program; and demonstrations of graphics;
- ★ other useful routines.

● nascom	Asteroids	m/c,g £7.90
Extension Basic	Galaxy Invaders	m/c,g £5.90
Adds 30 new keywords to BASIC	Missile Defence	m/c,g £7.90

STRINGS TESTING & SORTING

Vincent Fojut comes to the aid of frustrated Atom users with three handy routines

ALTHOUGH Atom Basic has many advanced features, Atom users would be the first to admit the machine has some idiosyncrasies. Anyone who has ever tried converting a program from another version of Basic to run on the Atom, will appreciate the problems.

One example is strings. Most versions of Basic, including the BBC dialect, allow strings to be compared using any of six relational operators (=, <>, <, >, <=, >=).

= equal
<> not equal
< less than
> greater than
<= less than or equal
>= greater than or equal

However, Atom Basic is different. Whilst strings can be tested for equality, you cannot directly carry out other relational tests. So,

IF \$A = \$B THEN ... is fine.
IF \$A < \$B THEN ... is invalid

Let's imagine, you wish to sort a series of strings into alphabetical order. On the face of it, such a process may cause Atom users some concern. How do you sort strings if you apparently can't test which is greater, or less than, the others?

Take heart! There are several ways of tackling such problems, each with their own merits. In this case, what we need, ideally, is a general-purpose routine which allows us to carry out *any* relational test on *any* two strings.

A couple of subroutines which match our requirements, are provided here. Though functionally identical, one is in Basic, the other in machine code (to suite all tastes). Whilst the Basic version is possibly easier to incorporate into programs, the machine code equivalent does, as one might expect, offer speed advantages. To demonstrate the subroutines in action, a useful program for sorting variable-length strings is also provided.

As can be seen from the Basic version, program 1, operation of the routine is quite simple. The Basic variables X and Y are reserved for the routine. These must point to the two strings being tested, before the subroutine is called by the main program. The strings are then compared, character by character, using Atom Basic's byte indirection operator '?', until a mismatch is found. If the two strings are equal, scanning stops when the end of a string is detected.

```

1000 REM ATOM BASIC STRING
1010 REM RELATION TESTER.
1020 REM USES VARIABLES X,Y & Z.
1030 ;
1040 REM ON ENTRY, X & Y POINT
1050 REM TO THE TWO STRINGS TO BE
1060 REM COMPARED.
1070 ;
1080 REM ON EXIT, X & Y REFLECT THE
1090 REM RELATION BETWEEN THE STRINGS:-
1100 REM ( =, <>, <, >, <=, >= )
1110 ;
1120 ;
1130r Z=-1
1140 DO
1150   Z=Z+1
1160 UNTIL X?Z <> Y?Z OR X?Z = #D
1170 X = X?Z; Y = Y?Z
1180 RETURN

```

Program 1. String relation tester, in Basic

IF YOU HAVE A BBC MICRO THEN YOU NEED

 is the newsletter of the Independent National BBC Microcomputer Users Group. If you want the best source of information on the BBC Micro you can't do without . No matter what your interest – hardware, software, business, games or education then  has something for you.

so,  has available many special offers including dust covers (for computer, monitor, printer, disks), cassette leads and 1.2 ROMS FOR ONLY £5.50 INCLUSIVE – THE CHEAPEST PRICE ANYWHERE!
(Members Only)

 defies description – send off for a sample copy and you'll find that it sells itself to you: See one and you'll be hooked for life!!!

enclose a cheque/PO for £ p made payable to LASERBUG.

Please send the form to LASERBUG Dept. A, 10 Dawley Ride, Colnbrook, Slough, Berks., SL3 0QH.

Once a mismatch or end of string is encountered, the two variables, X and Y, are set up to reflect the relation between the strings. For example, if the first string is less than the other, X will be less than Y on exit. This relation can then be tested in Basic, using IF or UNTIL statements.

For instance, the following will test if \$A is less than \$B:

```
X=A; Y=B (set up X and Y to
point to the two strings)
GOSUB r (call the 'relation test'
subroutine)
IF X<Y... (ie IF $A<$B...)
```

Similarly, using the machine code version (assuming a start address of R), to test if \$AA(1) is greater than or equal to \$AA(2):

```
X=AA(1); Y=AA(2) (set up
pointers)
LINK R (call machine code subr.)
IF X>=Y... (ie IF $AA(1) >=
$AA(2)...) 
```

In this relatively simple way, a comparative test can be performed on any two strings.

The machine-code version of the routine (program 2) follows the same fundamental algorithm as its Basic counterpart. It is used in exactly the same fashion – ie X and Y point to the pair of strings to be examined, before the code is called via the LINK command. On return, X and Y will, as before, reflect the relative status of the strings.

Once program 2 has been run, the code generated can be saved as a separate machine-code file. Since it occupies a mere 44 bytes in this form, loading time should be trivial, thus encouraging use of the routine.

There is a particular advantage in using the variables X and Y with an assembly-language program, since the LINK command automatically passes the low-byte values of the Basic variables A, X and Y into the A, X and Y registers of the 6502 processor. Consequently, once the machine code version has saved the X and Y register contents in zero-page, it need only pick up the second-order bytes from X and Y to set up pointers to the strings being compared. Note that the routine requires four zero-page bytes for use as string pointers – any four locations in the range #80 to #AF can be used.

To put the routines into perspective, program 3 gives an alphanumeric bubble sort which accepts a series of variable-length strings, sorts them into alphabetical order using either of the routines described, and prints the results. It can easily be adapted to suit individual requirements.

There are a great many different sorting techniques available to the programmer. Although not the fastest, this bubble sort is relatively easy to code and understand (*Acorn User*, June).

The sort program assumes the machine code version of the string relation tester is being used. Assembled with a starting address of #2800. If the Basic subroutine is used, simply change the 'LINK R' on line 390 to 'GOSUB r', where 'r' is a label on the first line of the Basic subroutine. Try both versions and compare their relative speed performance.

A point to note is that the sort algorithm does not change the physical position of the strings, but re-arranges pointers to them. This is a lot quicker, though the end result is effectively the same.

It should also be mentioned that REMs, indentation and the like, have been used purely for clarity. These should be removed if the sort is to operate as speedily as possible, especially REMs within FOR...NEXT loops. Basic abbreviations and multi-statement lines will also help. The latter is particularly relevant to the Basic version of the string relation subrouting - it can, in fact, be set in one line.

Clearly, sorting string data is a common requirement, and is a prime example of the need to test strings for more than just 'equality'. The routines outlined above cure this shortcoming in Atom Basic, and provide general-purpose easy to use, and speedy techniques to meet such requirements.

I hope I have shown that you don't necessarily need to put up with any niggling deficiencies in your chosen machine. If your micro lacks a certain feature (and no computer is perfect), improvements can be made using relatively simple techniques, given a little effort and imagination.

MICROVOC

Patent applied for.

Yes it's here! A complete sound system for the B.B.C. Micro, realistically priced at £21 (Inc. V.A.T.) plus £2.00 post and packaging. (domestic market only).

MICROVOC – the BBC Sound System

MICROVOC is a complete sound system designed specifically for the BBC micro, capable of use with either speech synthesis or computer produced music.

Using the BBC micro's own power, **MICROVOC** can literally fill the average sized room with a quality of sound you may not have believed possible.

Supplied with robust, ultra modern, spherical speakers, which can be free standing, to compliment the BBC machine, or fixed to the wall, or indeed out of sight on the underside of your desk, **MICROVOC** brings out the true quality of the BBC micros sound facilities.

The external speakers can be disconnected at will leaving **MICROVOCs** volume control to operate the internal speaker of the BBC micro.

NEW PRICES
APPLY FROM
MAY 13th

MUSICSOFT
SOFTWARE NOW
IN STOCK

OUR GUARANTEE – None of the original components of the BBC micro, including the cabinet need to be modified in any way to install 'MICROVOC'.

Our prime concern whilst designing '**MICROVOC**' was to ensure that your BBC micro warranty would remain unaffected.

MICROVOC can easily be fitted in five minutes and requires no drilling, soldering, or any technical expertise whatsoever. It can just as easily be removed, leaving your BBC micro in its original condition.

MICROVOC simply plugs into existing fittings on the BBC micro and makes use of the 'Reset' and 'Econet' apertures at the rear of the machine, which on current models are covered with a thin plastic film – removal of this film is relatively simple.

If your BBC micro suffers from the infuriating 'Buzz' then you will also need '**Buzzgo**'. '**Buzzgo**' simply plugs into the 1Mhz Bus to eliminate the infernal buzz. If purchased with '**MICROVOC**', **Buzzgo** costs an additional £1 (Inc. VAT). For separate purchases **Buzzgo** costs £2 (Inclusive).

WORDSWORTH

BEFORE YOU BUY

A BBC WORD-PROCESSOR

ASK YOUR DEALER THESE QUESTIONS:

- * Will it print a 100K document at one command?
- * Will it personalise a standard letter to 999 club members at one command?
- * While it is doing that, can I type up the minutes of the last meeting and save them on tape?
- * Can I see all the time how my print-out will look, using an ordinary television set?
- * Can it use the upside-down italics feature of my Obscuro Printer (without my having to buy an extra tape for £10)?
- * Can I embed printer codes at any position within a text line?
- * Will it align my 8-decimal-place figures, and add them up automatically for me?
- * Can I lock the keyboard in case the cat goes to sleep on it?
- * Can I search and replace, centralise text, count words, etc?
- * Does it work with all BBC operating systems, using cassettes?

IF ALL THE ANSWERS ARE YES,
AND IT COSTS LESS THAN £20,
BUY IT.

IT MUST BE WORDSWORTH!

HOOK UP TO TANDY COLOUR

THE addition of a low-cost colour graphics printer to Tandy's range stands to benefit Atom and BBC owners as much as anyone. The CGP115 has a centronics parallel interface which hooks up to the Atom with ease.

The printer arrives well packaged with paper, spare pens and power pack, together with a simple but well presented manual. The printer's size, or rather lack of it, belies its potential, and the narrowness of the paper became only a minor disadvantage when I worked out how many times I would really need greater width.

And so on to using this Oriental masterpiece. The printer, unlike others in this price bracket, is not dot-matrix, but is more akin to an X-Y plotter. The print head consists of a rotating mechanism containing four ballpoint pens (black, blue, red and green), each software selectable. The printer contains routines for drawing, rather than printing, the full ASCII character set with upper and lower case (with true descenders), and Japanese script!

The ASCII/Japanese output is selected by a DIP switch along with serial/parallel input, line feed on/off and character size, (40 or 80 characters per line). The latter is also software selectable. The parallel interface is a standard Centronics.

Switching on shows some of the thought that has gone into the design of the software. The pens are vibrated into life and then each in turn draws a small box to get the ink flowing and warn the operator if a pen is low on ink. Changing the pen is a few seconds work and poses no problems. A self-test routine is invoked if the paper feed switch is pressed when the printer is turned on, and results in the full character set being drawn using all four pens.

The printer has two modes of operation, text and graphics, and at switch-on the text mode is selected with the character size determined by the DIP switch.

In text mode, five ASCII codes are used to control backspace, reverse line feed, change colour and select graphics or text mode, and in this mode high quality text may be produced, albeit rather slowly at 12cps (program 1).

However, it is in the graphics

Colin Bernard describes his adventures with the £150 CGP115 graphics plotter from Tandy

mode that this printer really scores. As previously mentioned, it behaves as an X-Y plotter with the pen having a horizontal resolution of 480 steps, each 0.2mm. The vertical direction has the same resolution but without limit, and the accuracy of the paper feed is maintained by a tractor feed using small pins on the paper roller.

Once in the graphics mode, the printer is controlled by passing to it any of 13 control codes, (all

alphabetic), together with any other information required. Program 1, for example, will give one line of output for each pen, the colour being selected by outputting a 'C' followed by the variable containing the required colour code, (0-3). Note also the use of ' to force a carriage return which is required for some codes.

Controlling the print size is more complicated because the size, in characters per line, is passed using

SOFTWARE INVASION

001 INVADERS

Arcade quality full feature Space Invader game, written in machine code using Mode 1 colour graphics. Hi-Score, Mystery Ship, Bonus Base, Advancing, Walking Aliens.

Runs on a model B for £6.95 inc.

002 GALAXIAN

Arcade quality game using machine code, vivid Mode 1 colour, Moving Stars, Hi-Score, Bonus Ship, Flagships, Swooping Aliens and Exciting Sound Effects.

Runs on a model B for £6.95 inc.

003 APOLLO

Lunar Lander with a difference! 4 stage game comprising Orbit, Long Range, Mid Range, Detailed Landings, Limited Fuel, Hall of Fame, Sound, Moon Walk etc.

Runs on a model B for £6.95 inc.

004 BLACKJACK, TEXTPRO, DISASSEMBLER

1 tape containing 3 programs representing incredible value for money.

BLACKJACK is like the arcade game, but uses much better graphics - so real you could pick them off the screen!

TEXTPRO is a simple word processor, offering text scrolling, cassette routines, line editing, justification, insertion and deletion, variable line width and page length, data verification, line centralizing and printer commands including page scrolling, large print and variable spacing. Full instructions and function key labels supplied. DISASSEMBLER lists object code and Assembler mnemonics. Includes a pause function, printer option, page mode and only occupies 4.5K of RAM. Full instructions and function key labels supplied.

Runs on a model B for £6.95 inc.

005 GUNSMOKE is the latest release from SOFTWARE INVASION. It's completely different from any game you've played before. Superb realistic sound effects - high speed animation - nail biting action - fantastic highly detailed graphics, mixing colours to produce brown, grey and olive in addition to the normal shades. You play the part of a Wild West Gunslinger, dodging bullets and trying to shoot bandits as they appear in doors, windows, alleys and on the roof. There's sixteen different bandits who need no provocation to fill you full of lead. If you manage to kill them all, it's not over, day turns to night and the nightmare begins again.

If you're quick on the draw, this game's for you!

GUNSMOKE runs on a BBC Micro model B and costs just £7.95 inclusive.

Program 5. Graphs

Same size graph

Join the jet set.

The Acorn Spark-Jet printer employs the very latest dry-ink printing technology, resulting in fast, clean and virtually noiseless printing.

This is all due to its advanced serial matrix printhead. Electronic impulses fire minute particles of the carbon rod at high speed through a 7x7 dot matrix, producing extremely high-quality lettering and graphics time after time.

And, as there are no moving parts within the head itself, the action is as quiet as a whisper.

In addition, the Acorn Spark-Jet printer is also capable of handling high resolution graphics and plotting.

It works with any 8 bit micro-computer, via the centronics parallel interface, and is specially recommended for use with the BBC Micro (also designed and built by Acorn Computers Ltd.) to form a thoroughly professional word, copy and graphics processing system.

All printing is logic-seeing and bi-directional and can be executed in normal, double height, double width and underlined characters.

And yet, with all these advanced features, the Spark-Jet costs only £365.

THE ACORN SPARK-JET PRINTER

Not only that, but you also receive a free program on cassette that enables you to 'dump' graphics from either monitor or TV.

If you're interested in joining the jet set, simply call in at one of the dealers listed below. He'll tell you everything you need to know.

BBC EXPANDABLE CONSOLE

A professional console to house disc drives/2nd processor/Torch dual drives/teletext, etc. All untidy wiring out of sight in the strong aluminium console in a matching textured colour. Coming soon a bolt on extra module for extra expansions.

Also available a matching printer stand, yes stack your paper under the printer.

PRINTER/VDU STAND

BBC owners who only need a VDU stand will find the stand slips comfortably over the BBC with adequate ventilation allowed for. After use the micro can be slid UNDER the stand acting as a dust cover when micro not in use

PRICES :

BASIC CONSOLE as shown only £39.99 + £4.00 p/p
 PRINTER/VDU STAND only £14.99 + £2.00 p/p
 Please add V.A.T. at 15%

BBC 32K EDUCATIONAL SOFTWARE FOR ECONOMICS

'AN INTRODUCTION TO NATIONAL INCOME MODELS'

by Robert Jones

(Lecturer in Economics, Trent Polytechnic)

Five programs on cassette which invite the user to build and explore an economic model. Extensive use of graphics to simulate the effects of changes in the economy. Complements most introductory courses in economics, e.g. A level. Topics include: consumption function, equilibrium income, the multiplier, the role of the government, foreign trade.

Ideal for class or individual use.

£15.95 inclusive of manual, p&p

PUNC-MAN

Is more than just a game. TWO animated amusing programmes which help children (7-11+) with their punctuation. Noshier gobbles the punctuation marks, then YOU - as Puncman - put them back... BBC 'B' and Spectrum 48k. £7.95.

STORY'A'

"Spanish Gold" is a picture story-book on the screen. It allows young children (7-11+ according to reading age) to control the direction the story takes. Several endings and full colour graphics. £6.95. BBC 'B' only.

HANDWRITING

Christopher Jarman's 'Basic Modern Hand' computerised! Two suites each consisting of five programmes and each suite costing £9.95. "LETTERS" draws lower case letters grouped in families; "CAPITALS" draws upper and numerals. Interactive, full-colour, and sound (which can be turned off!) Spectrum versions also available.

a formula that results in a rather limited size of characters for the range of the variable that may be passed (0-63). For example, if this variable is set from 0-3, the character size that results is 80, 40, 27 and 20 characters per line respectively.

The print direction may also be software controlled in a similar manner to the pen colour by outputting a 'O' followed by 0, 1, 2 or 3. Combining 'O1' for top to bottom print with 'S63' for one character per line enables banners to be easily produced, if somewhat wasteful of paper.

Program 2 shows the use of the print size command to produce either a subscript or a superscript depending on the setting of a flag. Note the use of the 'A' command to return to the text mode, although this is not always necessary, since text may be output in graphics mode using the 'P' command.

The plotting facilities of the CGP115 are extremely versatile, offering move and draw commands

with absolute or relative addressing. One useful feature is the ability to combine several addresses together in one command. In program 3, 12 random triangles are drawn using absolute addressing in line 80 to get the position of the triangle, then combined relative addresses in line 120 to actually draw the triangle.

Since the plotting commands available are similar to those used by the BBC or Atom, high resolution graphics may be easily transferred from screen to paper by modifying the existing software. The only time this may be a problem is when the bit pattern is poked directly to the screen memory. This cannot be done directly with this type of printer, but program 4 is a screen dump to transfer mode 4 graphics from screen to paper.

Graphs are obviously no problem, with commands being available to draw positive and negative X and Y axis, and the ability to move the origin around the paper. Program 5 demonstrates graph drawing and is in fact an 'Atomised' version of a program

taken from the manual.

One of the major uses of a printer is for program development. Being able to see the whole listing makes bug hunting easier, and problems can often be seen more quickly than when working from a screen. Program 6 improves this facility. It is designed to sit in the upper text area of an Atom, from 8200 on, and will take any program in the lower text area and do a formatted print-out. All REMs are highlighted in red, and the first REM of a group causes a linefeed, thus paragraphing the coding. The program standardises the spacing between line number and statement and indents according to the nesting level if in a FOR/NEXT or a DO/UNTIL loop. Listing 6 was obtained by the program listing itself (cassettes are available from the author at £3.50).

CGP115 Colour Graphics Printer.
£149 from Tandy stores. Pens, £1.99 for 3. Paper rolls (4½in x 150ft), £4.99 for 3.

▶ page 72

different colour. I have therefore used only eight patterns for colours 0 to 7, and repeat them for colours 8 to 15. The patterns are shown in figure 10. The pixels are rectangular, so a four by two matrix is used (six by two for the Epson). The approach differs between dot-band and line-of-dots printers. The former will require the preparation and printing of four (or six, printer bytes, putting two bits into each. The latter will require that each line is scanned twice, and the printer byte will have to be rotated four bits at a time by multiplying by 16. A program of the first type, written for the Epson, was published in November. The techniques are not identical to those above, but the principles are unchanged.

Program 5 is a mode 2 dump for the Olivetti. The patterns are defined in lines 1005 to 1013. The picture is defined in line 1016, in a similar way to the mode 0 dump.

Line 1030 takes care of the flashing colours, by translating colours 8 to 15 into 0 to 7 repeated. The screen scan, byte preparation and printing are as usual, for a plan A dump.

The dumps have been presented

in three groups, dumping modes 0, 145, and 2 respectively. It is possible by amalgamation, or turgid programming, to write a single program to dump all modes. I have avoided this, as the complexity makes them difficult to explain simply. One normally knows which mode a graphics program is written in, and can select the appropriate dump. The approach advocated in the previous article was to save the dumps as procedures and merge them on to the graphics program, calling them up as desired. There are other ways.

One is to chain the graphics dump. This is perfect for disc users, no unwanted 'searching' messages appear, and the dump runs automatically. It is possible to suppress the unwanted messages by the trick mentioned in the June article, or by using the appropriate *FX3 call, which does *not* operate as in the *User Guide*, and whose workings will be discussed separately. The second approach is to have a small procedure to select and run the appropriate dump for you. I do not find this valuable, but the program brings together

threads culled from the pages of this magazine. It leaves your original graphics program intact, and ready to be re-run.

The procedure is called PROC DUMPIT and uses the USR function to check the current mode in lines 1001 to 1004. An error message is issued if the program is not in a graphics mode (lines 1005, 1014 and 1015).

FNmax determines the maximum X text parameter, and lines 1006 and 1007 define a single character text window, which lines 1007 and 1010 fill to the current colour. The appropriate program is then loaded above the original by resetting PAGE (line 1011) and RUN.

Disc driven micro owners should now reset PAGE to &1900, and tape users to &0E00 to recover their original program. This can be inserted as the last line of each DUMP program. Note that your three dumps will have to be called DUMP0, DUMP145, and DUMP2.

All the dumps used so far are slow, taking up to 30 minutes for a complete screen dump in the worst cases. In the next article I will introduce a small dose of assembly language to liven the proceedings.

PRIMARY PROGRAMS

John Corder and Gary Hunt examine five educational packages

AS THERE is so little software around for the BBC micro which might be classified as 'educational', we were keen to try five short programs from Schoolsoft.

Addition deals with pairs of numbers between one and nine. If the user answers correctly, two notes sound and, after a pause to print the complete sum, the program moves on. An incorrect response produces a buzzing signal and the message: 'That's wrong Peter. Watch the men to see what the answer should be.' Simultaneously, the sum is displayed using the appropriate number of matchstick men who walk across the screen to the answer box.

After 10 questions a work record appears which shows all questions with their correct answers, a tick or cross to show whether the user got each one right, and a total. 0,1 or 2 is classed as 'poor', 3 to 5 is 'fair', 6 to 8 is good and 9 or 10 superb.

A number of criticisms could be made. Children who made mistakes were unable to read the computer's response and watch the graphics at the same time. They found the language used too difficult – and showed it to be superfluous by concentrating on the graphics alone.

To run the program again pupils are invited to press the space bar. If any other key is accidentally depressed the program stops and there are no instructions to type RUN to restart. Obviously, with young children in mind, it would have been far better, and easy, to depress any key to restart. It would also mean less disruption.

The *Subtraction* program involves numbers less than 10 and, when a mistake is made, a double-decker bus moves across the graphics section of the screen. For the question $3-2=$ the bus has three people on board, two of whom get

Simple Addition £10; Simple Subtraction £10; Simple Multiplication £10; Simple Division £10; Carousel £5. From Schoolsoft, 19 Shadwell Grove, Radcliffe-on-Trent, Nottingham.

off at a bus stop. The bus then moves to the final stop where the remaining person alights to deliver the correct answer of $3-2=1$. This answer flashes for a short time. If the child has difficulty, pressing the space bar splits the colours of the people on the bus. All the black ones alight first and those that remain are blue.

As with several of these programs, and this one in particular, many children enjoyed the graphics so much that they made deliberate mistakes. After 10 questions a result sheet is displayed similar to that described in the addition program. This happens in the multiplication and division programs as well.

Multiplication deals with small questions up to 5×5 . If the answer is correct the program moves on to the next question, if not a steam engine appears (complete with sound effects) with the appropriate number of round dots lined up on its tender. For example, 4×3 is represented as four layers of three dots. The child can again ask for help. For example, with the question $4 \times 5 =$, four groups of five dots will appear in the graphics area above the engine.

The format of *Division* is similar to that of the previous three. The most difficult question was $20/4=$. An incorrect answer produces a cricketer who bats the appropriate number of dots into boxes. For 16, he would bat four balls into four boxes.

Text saying the answer is wrong and that the child should look at the pictures, only appears for about

six seconds. None of the children could read it in that time and they again found written instructions unnecessary.

Many children commented that there was no facility to delete an error. Some children also found initial difficulty because, after entering their name at the beginning of each program, they are not told to use the return key. Nowhere else in these programs is this necessary.

Carousel is similar to the game 'Simon' where a sequence of coloured sectors appears and the user has to remember and record them in the correct order. If he/she is successful, an extra colour is added to the sequence; if the order is incorrect the proper sequence is displayed. Children enjoyed playing this game, although those who have Simon at home tell us it does not stop after a sequence of 10 colours has been recalled as this program does. Our reactions to the programs were predictable; a mixture of disappointment, enjoyment and that feeling 'if only we'd been there at the beginning...' Minor changes could make them much more acceptable to teachers. Nevertheless children enjoyed and benefitted from using them. Comment was passed as to how useful it is to know whether children are getting the answers right by listening to the sound effects.

Of the limited amount of software available, the programs are probably the most suitable material we have yet found for children at the early stages of these processes. It just seems unfortunate that the problems we found in a couple of weeks could easily have been anticipated.

● John Corder and Gary Hunt teach at Oval Primary School in London.

Everything for the Acorn and BBC microcomputer user.

ACORN USER EXHIBITION

Cunard International Hotel

Hammersmith,
25-28 August 1983

FIRST PUBLIC SHOWING OF ACORN'S NEW ELECTRON MICRO

The Acorn User Exhibition at the Cunard, Hammersmith will house the largest display of Acorn products ever assembled under one roof. It will be four days of non-stop entertainment and education for parents and children alike.

The new Electron, the second processors for the BBC micro, the BBC Buggy, all the new software and hardware will be on show. There'll be competitions, prizes, Acorn experts to answer your technical questions, demonstrations and lots and lots of bargains.

If you are an Acorn owner, or just thinking about being one, you can't afford to miss it.

Opening hours: August 25th-27th, 10am-7 pm; August 28th, 10am-4 pm.

Admission charges: Adults £2 per ticket, Children £1 per ticket.

We have arranged for nearly every exhibitor to redeem the cost of your ticket when you buy something from their stand.

Group rates: 10% discount for parties of 10 or more.

Buses: Frequent services from central London.

Tubes: Hammersmith Broadway - Metropolitan, District and Piccadilly lines.

Car Parking: Several car parks in the immediate area.

For details of exhibition stands and advance ticket sales contact Computer Marketplace Ltd, 20 Orange Street, London WC2H 7ED. Tel: 01-930 1612.

ADVANCE BOOKING COUPON Miss the queue - buy your tickets in advance.
Computer Marketplace Ltd, 20 Orange Street, London WC2H 7ED.

Please send _____ Adult tickets at £2 _____ Childrens tickets at £1
I enclose a cheque/postal order value £ _____ payable to Computer Marketplace Ltd

COMMAND YOUR OWN SPACE STATION FOR JUST £49.95.

At the Microage Space Station, you're always in command. Sit at the controls and you'll see everything laid out neatly before you.

There's room for your printer, monitor, keyboard, cassette recorder and disk drives - and a handy draw for programs and manuals.

The Microage Space Station takes off for just £49.95 from our launch pad at 135 Hale Lane, Edgware, Middlesex.

If you prefer we'll send it direct by inter-galactic courier or mail order, as earthlings put it, adding £8.00 to the price, when you send your order.

When you're running a busy universe, you need total control - and with the Microage Space Station you have it.

Comes in kit form with easy assemble instructions.

To: Microage Electronics Limited, 135 Hale Lane, Edgware, Middlesex
Please tick the _____ (quantity) Space Stations at £57.95 each
(including delivery + VAT). I enclose a cheque for £ _____

Official BBC Programmers Kit

for all BBC Microcomputer users!

De-luxe BBC Programmers Kit consisting of:

- * 100 sheet flowchart pad with de-luxe BBC grip binder
- * 100 sheet screen layout pad with de-luxe BBC grip binder
- * 100 sheet symbol design pad with de-luxe BBC grip binder

PLUS super quality BBC ringbinder to store your programmes and notes

All items finished
in Official BBC Livery
and specially boxed.

Price
only

£15

R.R.P.
(inc.VAT.)

Available from
your BBC Microcomputer dealer,
or in cases of difficulty add £1 post and packing
and order direct from:

**Intastor Micro Aids, FREEPOST,
Stroud, Gloucestershire, GL6 1BR.**

See it on Stand 12A
at the Acorn User Exhibition.

SPECIAL EXHIBITION KIT PRICE – ONLY £12
or items can be purchased separately.

Also available!
NEW BBC Microcomputer Transit Case.

Trade Enquiries welcome.

BBC MICRO INSTANT MACHINE CODE!

Yes, it's true. Instant machine code from a good subset of BBC BASIC. Type your BASIC program into your model B BBC Micro, trigger the compiler, and your program is changed almost instantaneously into superfast machine code. For £34.95 you get: Cassette version of the complete compiler (along with a version of the compiler for use with discs, ready for when you upgrade, the disc version being dubbed on the cassette after the cassette version); complete compiler listing; extensive documentation and instructions. The compiler was written by Jeremy Ruston.

THE BBC MICRO REVEALED

By Jeremy Ruston

'...destined to become the bible of all BBC microcomputer users...' (Personal Computing Today). If you've mastered the manual, then this book is for you. Just £7.95

LET YOUR BBC MICRO TEACH YOU TO PROGRAM

By Tim Hartnell

'...takes you further into the cloudy areas of the BBC machine than anything else I've yet seen...' (Computer and Video Games). If you're just starting out in the world of programming, then this book is the one for you. Forty complete programs, including Othello/Reversi, Piano and a host of dramatic graphic demos. Just £6.45

SOLVE THE PLAYFAIR CIPHER AND WIN 2 ACORNSOFT TAPES

CODES, ciphers and secret writing are as old as man himself. From the day people discovered secrets to impart, they had to devise means of rendering them meaningless or invisible to prying eyes.

One of the earliest methods was devised by the Greeks whereby a message was written across thin strips of parchment wound tightly round a cylinder. When unravelled it could be read only by someone who had an identical cylinder to wrap the parchment around!

Julius Caesar used a simple substitution cipher for his military communications - eg A became B, B became C, etc - the sort virtually anyone can crack within a few minutes. In this respect he was typical of many great military figures who, despite the fact that most advances in cipher technology have occurred because of the demands of the military, become too involved with waging war to ensure professional cryptographic security is preserved. The brilliant Polish and British cryptanalysts who deciphered messages from the German Enigma machine in World War II (see *Acorn User*, October) time and again found their way into the system because of sloppy discipline on the part of the German operators.

The Elizabethan age saw explosion of interest in these matters, perhaps because of the activities of Sir Francis Walsingham, one of Elizabeth I's principal secretaries. Many historians believe he was the founder of the modern-day police state with a network of spies and informers going hand in hand with repressive political measures.

One of the more famous ciphers of the day was Francis Bacon's bilateral cipher, which relied upon a printer using two different type fonts in setting a given passage. The differences between the fonts had to be unnoticed to the casual reader, but could be picked out by those in the know. Elizabethan printing was frequently a slapdash affair but this hasn't prevented generations of avid members of the Baconian society from poring through the *First Folio* to prove their hero wrote Shakespeare - and left a message to prove it.

For those who like this sort of

thing, a fascinating and in places hilarious book called *The Shakespearean Ciphers Examined* is a must. It's a close analysis by William Friedman, one of America's top cryptanalysts in World War II, of the methods employed by such diligent Baconians as I. Donnelly and Mrs Gallup to prove their case.

The book demonstrates, using the same deciphering techniques as the Baconians, that Shakespeare was written by the Earl of Oxford, Christopher Marlowe, Mrs Gallup - and even the Friedmans themselves!

Modern-day ciphers are, of course, computer-based (often using prime numbers well over three hundred digits long) and are generally thought to be unbreakable. Nevertheless, the principle that what one man can do another can undo remains - and history is littered with examples of 'unbreakable' codes being solved, the Enigma machine being only one example.

For this puzzle we're giving you a Playfair cipher to unravel. This cipher was devised by a talented Englishman, Sir Charles Wheatstone (1802-75), in the 1850s, and named after his friend Baron Playfair, who did much to promote it.

It gained enthusiastic approval because of its ease of use combined with its high security

features, and continued to be used, with modifications, throughout World War II. A simple version works as follows. First the alphabet is reduced to 25 letters (J is dropped) and a five by five grid is set up - the Basic equivalent of programming the computer to DIM GRID(5,5).

The alphabet is then inscribed on to the grid using a keyword or phrase known to both sender and receiver, let us say in this example: *to be or not to be that is the question*. Each letter is used once only, so our actual keyword is TOBERNHAI SOU. Then the remaining letters of the alphabet are placed on to the grid in alphabetical order, to give:

T	O	B	E	R
N	H	A	I	S
Q	U	C	D	F
G	K	L	M	P
V	W	X	Y	Z

Suppose we wish to send the message *the unjust war will soon be over*, we first remove all blanks, substitute an I for any Js, and split it into two-letter groups (digraphs). Where any pair of letters is the same a padding letter (Z) is inserted and again Z is added at the end if the final letter is left on its own. Our message now looks like this: TH/EU/NI/US/TW/AR/WI/LZ/

LS/OZ/ON/BE/OV/ER.

To encipher each digraph you look at the position of the relevant two letters in the grid and for each letter substitute the letter which is in the same row as itself but in the same column as its partner. Thus TH become ON and EU becomes OD. There are two other points to note. First, where both letters are in the same row substitute the letter immediately to the right of each letter (HA=AI). Second, where both letters are in the same column substitute the letter immediately below each letter (OU=HK).

If any of these operations go over the edge of the grid, simply scroll back to the beginning of the row or column. Therefore HW=UO and BR = ET.

Our fully encoded message now looks like this: ONODH SFHOV SBYHP XPARW THERT WRT (placing it into five letter groups is a cryptographic convention).

It is easy to understand why this cipher became so popular. The standard method of attacking any message is to make a frequency count (the commonest letters in the English language are ETOANI), but a frequency count here is of little help because each letter can be virtually anything. In addition, the ease with which this method can be learned gives it a flying start over its more time-consuming competitors.

All the same, the Playfair cipher suffers from weaknesses which lay it wide open to attack. First, though the frequency count of the individual letters has been stymied there are digraph charts available for almost every language (the commonest digraphs in English are TH,ER,ON,AN,RE,HE,IN,ED,ND,HA,AT,EN,ES,OF,OR,NT,EA,TI,TO,IT).

Because TH will always become ON (in our chart) sooner or later the enemy will have enough material to crack it. Of course, we could get round this by running the encoded message through another Playfair cipher and yet another . . . but then we would lose its big advantage – simplicity. A second weakness is that – as Enigma showed – when operators are asked to use keywords of their own devising, time and again a lack of imagination lets them down and they revert to using their initials or names of girlfriends. Worse still, they sometimes use keywords linked to the text itself through an

association of ideas. The final and most fatal flaw is that a digraph is a mirror image of its enciphered version. In other words if TH becomes ON then HT becomes NO: this enormously assists the cryptanalyst.

The following message in the form of a Playfair cipher has landed on your desk. The only clue is that you're up against the same operator you met in *Acorn User* before. He's known to favour keywords of a literary flavour – eg titles of plays, books or poems. Also, it is suspected that somewhere in the message the word HITLER occurs.

What is the message?

This month's competition for under-13s. Please give your school and class with your answer. Find the highest number you can using all the digits from 1 to 9 once and once only which can be formed by multiplying two other numbers which together contain all the nine digits once only.

Answers on a postcard please to August Competition, *Acorn User*, 53 Bedford Square, London WC1 to arrive not later than September 5.

APRIL RESULTS

Result of April's competition
An excellent response to both competitions and it's good to see all you under-13s programming away.

The answer as to whether there are any days of the week on which a new century cannot begin is yes: Sunday, Wednesday and Friday, which about 70% of the 100 entrants got right.

The perfect squares formed by KING and KNIGHT were 3721 and 327184. Only two wrong entries to this one.

The winners were Vicki Bell of Charlton Park School, Glos, James Wilson of Lanark and D.M. Laugharne of Northwich, Cheshire to whom Acornsoft packages have been sent. Several readers sent in mathematical proofs of the Century problem, the most concise and elegant of which came from J.G. Banks of Rickmansworth.

THE LITTLE

VERSATILE, RUGGED, FAST

AND GOOD VALUE IS

CHRIS SMITH'S OPINION

THE Blackboard Electronics Analogue/Digital Converter plugs into the input/output user port on the underside of the BBC micro via a ribbon cable. It is powered from the computer, making it versatile, convenient and fast. Analogue signal can be converted to eight-bit digital readings in less than 9µs so frequencies of 10 KHz can be resolved. Blackboard Electronics talks of a faster machine being produced in the near future which will be able to cope with radio frequencies.

The processor section comprises a variable gain amplifier (X1 to X100); a high impedance input

Figure 1.

Figure 2.

BLACK BOX

buffer (10^{12}); a level shifter; and a switchable, variable, two-stage, bilateral current source ranging from 1A to 10mA, each infinitely variable down to zero.

So we have in effect a unit which will act as a large screened storage oscilloscope, or as a large readout three-digit multimeter. This versatility means the machine can interface the computer with a large number of transducers, including resistive types, directly and safely (although the VIA must be fitted to the model A).

The software supplied is well written and can be adapted for individual needs. The instructions it gives are easy to understand and use. The makers even include a listing, which shows their open mindedness, and desire to see it used wherever possible. An example of this is given in the instructions where details of an inverted display from resistive transducers and pH probes and light-dependant resistors (LDRs) are given.

The A/D Converter can be used to measure sound (an example is shown in figure 1), and, in its faster modes, will resolve whistling into a sine wave.

Voltages can be measured easily (up to 25V), either as a graph or large digits. This has particular advantages and uses in the lower secondary school where class voltmeters are a rarity, and expensive.

Voltages as low as 25mV can be measured using the internal operating amplifier and a further amplifier is available from BE which will monitor even smaller voltages. It should be stressed here that the machine is thoroughly protected against idiots who inadvertently, or deliberately, apply high voltages. I don't recommend it, but the buffering would protect it against even mains voltages.

Several attachments are available as optional extras. One is the LDR light detector which can be used for a number of different experiments (the calibration graph supplied works out actual light intensities). One interesting experiment is to point this sensor at a mains driven, incandescent light

Blackboard's black box A/D converter is reasonably priced at £79. The user port cable and jackplug give a good idea of its size

bulb. The trace speed can be increased to demonstrate the 100Hz wave form of the filament heating and cooling in response to the 50Hz mains voltage.

This particular piece of apparatus can be used also as a plasmagraph to measure heartbeat simply by putting the probe over a finger, increasing the gain, and adjusting the trace position button (not easy, but well worth it when you've got it). An example trace from the plasmagraph is shown in figure 2. The ranges of options that the converter can be used for is only limited by the user's imagination and inventiveness.

There are two reservations which occur regarding this machine. The first is whether the average science teacher should be encouraged to buy an A/D Converter when a model B comes with four converters supplied. The answer is that it depends what it will be used for. There is no doubt that the BBC A/D chip is delicate, and is nothing like as sensitive, adaptable, or safe. Neither is it as fast (the Blackboard Electronics converter is over 1000 times as fast).

My second thought is the need to use more than one converter at a

time – it could prove rather irritating having discovered this device, not to be able to measure more than one parameter at a time. Perhaps we shall see a multimonitor appearing in the range offered by Blackboard Electronics fairly soon.

My last comment concerns the instructions which come with the machine, which, while not poor, are certainly not particularly helpful. I was pleased to hear therefore that BE have decided to distribute their equipment through Philip Harris (the science education suppliers).

The advantage of this association with Philip Harris in terms of national support may be obvious, but the disadvantage is even more so, because the company has had to almost double its prices. However, they are still fairly reasonable (table 1).

A/D converter with program listing	£79.00
A/D program cassette	£9.50
A/D disc for 380Z	£12.00
Leads	£27.00–£35.00
Accessories (microphone, light sensor, temperature sensor)	£20.00
Infra-red detector	£7.50
Electronic ECG	£46.00
6522 VIA	£5.00
Power interface	£94.00

MUSIC NOTES

Sir, After testing the published cassette of my Quicksilva Music Processor, I would like to clarify some points about the software.

The absence of a function-key label has been pointed out to Quicksilva, and I hope to see this included in the package shortly. Cassette labels will, of course, be provided.

The three music files are each nearly twice as long as necessary and should finish at blocks &1A, &26 and &28 respectively. This is also being corrected.

A minor point is the 'helicopter' sound effect given in section 7.1 of the booklet. Channel 1 settings should be: 1 09 92 0 and not: 1 09 00 0.

Andy Williams
Burton-on-Trent

TV SHUDDER

Sir, I am writing about the problem Acorn users are finding with 'shudder' or 'frame jump' occurring when games such as *Defender* are run on ordinary TV sets.

This fault is caused by the fact that in many modern TV sets there is a chip controlling the line and field sync pulses.

These sets have a TDA 2571 or similar IC which divides the 625 lines down to one for the field sync pulse, which is where the 'shudder' occurs. This method is used because in remote parts of the country the transmitted TV signal is so corrupted that there are no distinguishable sync pulses, and yet a picture can be received, so this information is used instead to get the sync pulses.

On high speed games such as *Defender*, the ULA video processor is caught out and misses the first few lines of video information, which is off screen and not seen anyway. With these lines missing the sync pulse occurs progressively later and hence the 'shudder', because the auto sync circuits detect this and attempt to re-

sync the set with a 'jump'.

The same problem occurs with VCRs, so TV set designers have a button on the front of a TV set to disable the IC and use the mains frequency to lock the picture.

So please note this button is called the 'VCR button' and must be used.

We have done a lot of research into this problem as it affects most computers - not only the BBC. Also we have tried a large number of changes to the BBC and have not yet damaged or blown anything up, but many times it never works and hangs up. When things were switched off and restored the computer worked perfectly.

P. Sipos
Surrey

SEIKOSHA HELP

Sir, In November's *Acorn User*, George Hill published the final part of a program for printing a 'test card' direct from the screen onto the Epson MX80 FT2. (Would this be known as a 'screen print program' and be known as 'software'.)

I do not have the Epson but a Seikosha GP100A, bought to help me with my 'O' Level computer studies. My problem is that I cannot control my printer, it remains functional only in its preset mode.

The manual supplied might just as well be written in Japanese for all the sense it makes. The retailer cannot help, and despite promises to supply 'a modified software program' to enable 'graphics printing', has yet to do so.

I need to print programs for my school which contain charts and graphs, for example, sine and cosine curves.

Andrew Gausser
Birmingham

My sympathy for your bafflement with printer manuals. An information sheet on the Seikosha was written as part of the review of the Seikosha in July's issue. It includes example programs and a translation of the vital bits of the manual from the 'Japanese'. Copies are available from the *Acorn User* office (50p plus SAE).

An assembly language dump program was published in the October issue of *Acorn User*. This is scantily documented, but type it in (absolutely no mistakes allowed!), and then run it. Typing CALL BEGIN will cause it to dump the screen. A future issue will contain a shorter hybrid (Basic plus assembly language) screen dump for this printer. The series of articles on printers will, we hope, have helped you in understanding your printer, and in writing your own screen dumps, which are 'software'.

ADDISON-WESLEY PUBLISHERS
53 BEDFORD SQUARE
LONDON, WC1B 3DQ.

Att. of KITTY MILNE
ACORN USER.

I have run the program for the SEIKOSHA GP 100A and
joy of joy's IT WORKS. I have been able to 'SCREEN DUMP'
several small projects without any real problems.

It seems so inadequate to say just THANK YOU so:-

THANK YOU---THANK YOU---THANK YOU---THANK YOU---
THANK YOU---THANK YOU---THANK YOU---THANK YOU---
THANK YOU---THANK YOU---THANK YOU---THANK YOU---

Yours with GRATITUDE

Andrew Gausser.

ANNOYING CLICKS

Sir, My BBC model B seems to have an intermittent fault in that occasionally the TV picture 'freezes' and the only way out is to break. First, I would be interested to know what might be causing this and second, although Basic programs can be restored using OLD etc, how can I get back commercial machine code games programs, such as Acornsoft's 'Snapper' and 'Planetoid', since OLD and RUN (or *RUN) do not work in these cases?

Incidentally, why does the cassette relay (I assume it is the cassette relay) make such an irritating clicking 'noise' when a program is being loaded? From time to time I get a loading problem when the machine fails to spot the beginning/end of a block and there is no corresponding click from the relay. Could this be a cause or a symptom of a fault elsewhere?

I should add that both the above problems occurred before and after a recent OS upgrade from 0.1 to 1.2 and no fault was found when the upgrade was performed by the dealer.

M. Gibson
Staffs

The most likely causes of your picture 'freezing' are mains or static glitches. A possible cause could be overheating of the machine. Your second query: commercial machine code games can't be recovered because of the software protection built into them. You'll just have to re-load them.

The relay clicks every time a block is loaded. If the block doesn't load, the relay doesn't click - it's that simple! If your machine fails to spot the beginning/end of a block then it would be a fault on the cassette, not your micro.

NEW GUARANTEE

Sir, I have recently had my model B upgraded to take a disc interface. This was carried out by Retail Control Systems within my original six months guarantee period.

According to your October 1982 issue, this extends the maker's guarantee by three months. RSC deny all knowledge of this, although they

do state that their work is guaranteed for three months.

I should be most grateful if you could make it clear to me if my maker's guarantee is extended.

S. Belcher
Essex

Our news item in October repeated Acorn's statement to us at that time. However, their official line now is that the three-month upgrade guarantee has no effect at all on the main guarantee.

EMPTY RAM

Sir, On switching on my BBC model B and typing 'OLD', I invariably get the 'Bad program' message, even though nothing has been entered. On using a memory display program, the contents are always the same - a series of several lines with the same number 3328 all of which consist of the word trace followed by six lines of hashes (#). Entering a new program clears this; but does it indicate a faulty chip anywhere, and are there any serious problems that could result from it?

David Evans
West Midlands

The reason for the 'Bad program' message appearing when you switch on and type OLD is that the RAM is empty. You don't have a faulty chip and nothing is wrong.

FOREIGN TV

Sir, I have a BBC model B and as I am going to live in Cyprus, I would like to know what problems I would have in using the computer with a domestic TV.

I have been informed that TVs bought in the UK have to be adapted for use there. Does this mean that my computer will need some sort of adaption? If so could you tell me how much the conversion would cost?

David Guest
London WC1

Cypriot TV is not compatible with the BBC micro. The modifications required to make it so are complex and expensive. Your best bet would either be to take a monitor or a British TV with you and use a transformer to cope with mains voltage differences.

TELLY SOUND

Sir, In the May issue of *Acorn User* you published a letter from B. Sharrock and said it was not possible to have sound through the TV set.

I enclose details of the method that I used to achieve sound through a TV.

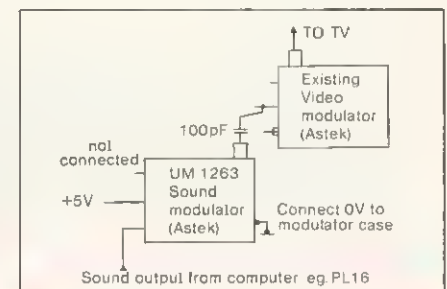

I have glued the sound modulator to the top of the existing video modulator, allowing a slight offset for the lid fixing screw.

The capacitor value was selected by trial and error. A larger value gives better sound quality but a reduction in picture quality and 100pF is about the maximum.

The 5V supply can be obtained from the PCB track connected to pin 16 of IC 45, while 0V can be obtained from the track connected to pin 7 of IC 47.

My computer has had this unit fitted since June last year and has suffered no ill effects.

J. Doggett
Middx

QUEST BUG

Sir, I would like to point out a small bug in Acornsoft's *Philosophers Quest*. It will treat any command starting with A (eg Attack) as a crawl command.

IN PROCW, which starts at 5750, the input is compared with a list of known commands, J is returned as 0 if not found. J is initially set to 0 in line 5752 but reset in line 5760 to 6.

If the command word is less than the first word (8) on the list, ENDPROC is reached with J still =6. If crawl is entered J=6 hence Attack=Crawl. This is easily corrected:

```
5775 IFX$<FNSTR(L,I) OR
      X$>FNSTR(H,I) THEN J=0:
      ENDPROC
```

CENTRONICS DUMP

Sir, I am searching for routines to dump graphics screens from my BBC (B) to a Centronics 739 printer. I must have written 20 letters, all enclosing stamps, to receive two replies, both negative. Can you make any suggestions? I would be very grateful even to be pointed in the right direction. We don't all own Epsoms!

A. Cameron
Inverness

To write any sort of printer dump it is necessary to have a copy of the relevant sections of the manual. Mr Cameron kindly supplied these, and the dump program (program 1) was written and sent. It worked first time (remarkable that!), and other programs for the Centronics 739 have been written since, which Mr Cameron has kindly tried out.

His printer seems to be suffering from a lot of breakdowns though. Do other readers have similar problems with this printer? The print quality is superb, but reliability is important too!

WEARTH WARNING

Sir, I recently experienced an unusual fault on my BBC model B which resulted in damage to output buffers on the computer and input buffers on a printer connected to it.

After considerable detective work

by the engineer of the Guildford Computer Centre, the fault was traced to a third piece of equipment, the distribution board to which all of the system except the printer was connected. This had a faulty earth lead. The result was that leakage currents were flowing in the signal circuits, damaging the buffers.

The story illustrates two important points. First, make sure all system earths are sound when interconnecting equipment. Second, when trouble strikes, there is no substitute for a good dealer who is prepared to back up his sales with service.

Dr. T. Wilson
Surrey

FORUM ERROR

Sir, A misprint occurs in the listing in Beeb Forum, July page 49. The command to save the program and data together should be:

*SAVE "Programe" E00 XXXX
where XXXX is the hex value of the number printed by the previous step.

The purpose of the technique is to save memory space by avoiding the use of numerous data statements within a program.

Robert Ward
Hull University

GAELSETT UPDATE

Sir, Thank you for June's careful review of Gaelsett's Extended Colour-Fill Graphics software. However Mike Milne seems to have been using the earliest version of ECFG (circa November), and has therefore concentrated on the facilities available with ECFG in mode 2, in line with the demonstration programs he had.

ECFG is in fact supported in all graphics plotting modes, and experience has shown that mode 2 is rarely the best when ECFG is present.

For instance, in mode 5, the screen can simultaneously show 289 different graduations of colour-mix from the 6561 available in mode 2, all accessed via the more user-friendly VDU 18,L,32,... ECFG option, without recourse to non-zero values of 'L'. Other sets of 289 shades can be chosen by use of VDU 19,... statements, and extra shades beyond the 289 by use of 'L' of VDU 18,L,64,... . And all this at a saving of 10k of RAM against mode 2!

For high-resolution graphics, mode 1 provides the same facilities as above for mode 5, but with a typical pixel resolution of 1/32 x 1/32 inches on a 14 inch monitor, so that ECFG's colour-mixing shows much less graininess, and is therefore preferred over mode 2 in terms of both the ECFG capability as well as line-drawing resolution. On a non-ECFG machine, execute VDU 23,240,&AA, &55, &AA, &55, &AA, &55: VDU 240,240,10,13,240,240,18,1,129, 16 in mode 1 versus mode 5.

The other point I would like to mention is that ECFG is not so much a 'program' as a machine-code extension which adaptively grafts itself onto whichever version of the operating system it finds in the machine. In this way ECFG facilities are available in Basic, or via OSWRCH calls in assembler, or as VDU statements executed from the keyboard. It will survive use of the break key.

ECFG has been designed to adapt itself to any future MOS, which is illustrated by the fact that it has been found to work without modification on the Electron. This is the more remarkable since ECFG uses unsupported jumps to MOS locations, otherwise it could not be implemented in 1/2k.

David Reader
Gaelsett

PLUG TO BLAME

Sir, My BBC B has had two of the heart-sinking faults described by several others but I haven't seen my simple solutions published in Acorn User. The first fault was the TV picture apparently 'falling' several times a second. I found that the plug going into the TV aerial socket had an unsoldered shield wire and the cure was to split this plug and clamp half the strands between each half of the plug before pushing back the plug's outer cover.

The second fault was the 'Block? Header? Data? Rewind tape' message often obtained when trying to load programs I'd written and saved myself. My tape recorder has an automatic recording level control and putting a 2kohm resistor in series in the microphone lead connecting the tape recorder and the computer worked perfectly for me.

SUBSCRIBE & SAVE

WE HATE to tell you this, but your subscription may well be running out. In fact, if you started with the October 1982 issue there are only two more issues to go! So now is the time to send off.

'But why should I?'

That's a good question and we know it's not easy to part with that extra £3, but here are five very good reasons:

1. If you get your subscription form into us by September 30, the subscription will run for 14 months, whether you are renewing your order or starting up a new subscription.
2. **NOT ONLY** do you get two extra copies of *Acorn User*, but also a complimentary copy of *Programming Hints and Tips for the BBC micro*. This book has been culled from the past year's

issues and will be published in August at £6.95 (Only on orders before September 30.)

3. **NOT ONLY** do you get two free magazines and a free book, but also access to our special subscriber's offers. In the last issue this took the form of £1 discounts on four exciting new books for the BBC micro. In the next issue, subscribers will receive an insert giving them £1 off entry to the *Acorn User Exhibition* in August. These special offers are not retrospective, but there will be others, so don't miss out - subscribe!
4. Not only do you get free magazines, a free book and special discounts, but also your own magazine delivered straight to your door each month.
5. The price of the magazine is bound to go up, but this will not affect subscribers.

We reckon this is pretty good value for your extra £3. In fact, spending an extra £3 could save you £13.95 - beat that for value!

You've seen the competition, and the past year has shown that only *Acorn User* gets the exclusive stories; only *Acorn User* gets the facts; only *Acorn User* gets things right (well, most of the time) - and *Acorn User* gives you the best ideas from the best authors and the real experts.

When you add it all up, there's only one magazine you can choose. And you can't afford to miss this offer. So fill in the form below right now, cut it out and send it off to save yourself time, hassle and money. Remember, September 30 is the date limit for these offers, and you must use the coupon below. Also, we regret that this offer can only apply to the UK.

SUBSCRIPTION SPECIAL - 2 FREE ISSUES PLUS BOOK

Please open one year's direct subscription to *Acorn User* starting October 1983. I enclose a cheque for **£15** payable to Addison-Wesley Publishers Limited.

Magazine programs now available on cassette to members at £3.50 inc: VAT & p&tp – see April/May issue for details.

February Issue: Program Features: BEEBMAZE – Find your way through the random maze, guided by 3D views from inside the maze – an excellent game FIVE-DICE – A Beeb implementation of YAHTZEE (R), a novel dice game. Also a listing of WINDY FIELD – a creation from Acornsoft, SPIROPLOT screen doodler, and a complete memory display program in a user key. Plus Machine Code Screen Dumps for the Epsom and Seikosha Printers; articles on USING FILES, IDEAS ON ANIMATION (including a Rotating Cube program), an Introduction to the Use of Procedures, a Survey of Books on the BBC Micro, and a Roundup of Disc System Hints. PLUS a variety of HINTS, TIPS AND INFO, including a single VDU command to perform a SIDEWAYS SCRDL.

March Issue: Program Features: Life (32K), Artillery Duel (116K '32K), Square Dance, 3D Rotation (will rotate any object). Printers for the BBC micro – Review of Epsom, Seikosha, Tandy and Olivetti. What to do with the new Operating System, Disc Formatter Program, and full Disc instruction set. Newcomers article on Text and Graphics Windows. PLUS How to get a new Operating System ROM and a special deal on Wordwise (members only).

April/May Issue Special Anniversary Issue – Contains index to the whole of BEEBUG Volume 1. Music Composer – create complex 3 part harmonies with this synthesiser Program. Colour bar chart generator program. Beeb implementation of the Connect Four Game. Invasion – a 16k. Plus Review of Tape Recorders for the Beeb; a Basic Program Editor, which lists variables and procedures, and executes Find and Replace in a Basic Program; Reviews of Acornsoft Games and the Torch Z80 Disc Pack. Disc Menu Program. Newcomers introduction to Mode 7. How to save the unsavable; and a routine to print Double Height Characters in all modes.

June Issue: Program Features: 'Return of the Diamond' A 16k adventure game, 'hedgehog' a well implemented 'frogger' type game, and Ellipto. Create your own off the shelf sound effects with Sound Wizard. Plus articles on Using Files, Rotating and Expanding Characters, Using Printers, and How to multi-program the User Keys. Reviews of The Hobbit Floppy Tape System, Adventure Games, and a Comparative Review of Wordwise and View. Plus FX Call Update, Disc Program Auto-relocator, Wordwise Update, and more BBC Book Reviews.

July issue: Games: Robot Attack (32k) and Anagrams, a 16k word game. Watching the Beeb at work – a sample program to show your micro at work. An introduction to discs – what are they and are they worth getting. Balloons – a coloured animation. Make your micro speak like Kenneth Kendal. Bad Program Lister – lists programs even when the computer pronounces them "bad". Reviews of Epsom and Seikosha's new printers. Five books of programs reviewed, plus more software reviews. Using Files Part 4 – A full disc sector editor program – to read and retrieve lost disc files, and how to modify Acornsoft's Planetoid. Plus hosts of useful hints.

BEEBUGSOFT: BEEBUG SOFTWARE LIBRARY
offers members a growing range of software from
£3.50 per cassette.

BEEBUG NEW OPERATING SYSTEM OFFER

BEEBUG members can now obtain the new 1-2 OPERATING SYSTEM ROM at around HALF PRICE. See BEEBUG Magazine February, March or April for details. As a result of BEEBUG negotiations with Acorn the ROM now may also be offered by other user groups to their members.

1. Starfire (32K). 2. Moonlander (16K). 3D Noughts and Crosses (32K). 3. Shape Match (16K). Mindbender (16K). 4. Magic Eel (32K). 5. Cylon Attack (32K). 6. Astro-Tracker (32K).

Utilities: 1. Disassembler (16K). Redefine (16K). Mini Text Ed (32K).

Applications: 1. Superplot (32K). 2. Masterfile (32K).

£10 SMALL AD SERVICE

Please include your cheque for £10 made payable to Addison Wesley Publishers Ltd. This is the standard fee. Don't forget your name, address or phone number. Send cheque plus form to Acorn User Small Ads, 53 Bedford Square, London WC1B 3DZ.

Announcing more exciting programs for the BBC.

Acornsoft is the software division of Acorn Computers, the company that designed and built the BBC Microcomputer. Here are four more exciting programs, all designed to get the most from your BBC Micro.

Magic Garden (£9.95) is a cassette based on Shirley Conran's successful book. It's a problem-solving program which provides the complete beginner with instant answers to the questions of what to plant and where. Simply tell the computer whether you prefer a shrub or a flower, the type of soil, light and shade conditions and required flowering time and the computer will come up with a selection of possible plants.

Draughts & Reversi (£9.95) is a cassette containing two traditional board games for you to play against the computer. Both give a graphic display of the board on the screen and you can enter your moves with either keyboard or joystick. The games can be played at varying levels of difficulty and on the higher levels you will find the computer to be a very worthy adversary.

Hopper (£9.95) is a game on cassette which can be played with either keyboard or joysticks. Hop the frog across the busy motorway trying to avoid four lanes of fast-moving traffic. To get across the river to the frog's lair you must leap on to the logs and turtles' backs, but beware of the diving turtles, the crocodile and the snake.

BCPL (£99.65) is a flexible modern structured language that's very easy to learn. The package consists of a BCPL language ROM, a 40/80 disc and a 450 page User Guide. The disc contains the BCPL Computer, a Screen Editor and a 6502 Assembler. BCPL is particularly good at handling Input and Output and is ideal for writing utility programs and to develop games and commercial packages.

How to get Acornsoft programs.

If you're a credit card holder and would like to buy the programs shown in this advertisement, or if you would like to know the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy the programs directly by sending off the order form below to:
Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Also use this form if you would like to receive the current free Acornsoft catalogue.

Please allow 28 days for delivery.

☎ Credit Card Holders: Telephone 01-200 0200.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me the following:-

PROGRAM	PRICE	QUANTITY	TOTAL	(Include Acornsoft use only)
Magic Garden	£9.95			SBX04
Draughts & Reversi	£9.95			SBC20
Hopper	£9.95			SBC23
BCPL	£99.65			SN1.03

TOTAL

I enclose PO/cheque payable to Acornsoft Ltd.

Or charge my credit card.

ACORNSOFT

Official Acorn and BBC dealers

Acorn dealers stock and service the BBC micro, Atom Computer, Acorn systems and Acornsoft software. The Acorn dealer not only sells computers and peripherals but provides vital customer support. Most have recently

attended technical seminars in Cambridge to ensure that they deal effectively with customers' enquiries. In addition, Acorn supply dealers with specific test and diagnostic equipment to speed fault finding.

BBC ALL OPERATING SYSTEMS 32K 747 FLIGHT SIMULATOR & BRIEFING

A full blown, pilot written simulation (writer of the famous Atom 747) real time instrument and visual display. 3D runway view (Heathrow or Gatwick), large dials, moving pointers plus digital readout. Demonstration approach and landing. Full, separate briefing program. Area chart, notes and flight plan. Fantastic!

A new concept, a new classic...

Wolfpack III

BBC 32K, all operating systems

Combat briefing and program

"Sometimes your first warning is a lancing disruptor beam striking from beyond—sometimes they materialise close at hand. You are either quick or dead!" "A think, zap and think again game!"

True in-space cumulative motion, amazing full colour Starfield graphics & sound. Multiple ship control, each ship has its own mission and destiny, 4 types of enemy, missile strikes. Good strategy rewarded by energy & promotion. Pool combat rewarded by death! (but rescue/refuel possible). Rotating base station, intergalactic warp.

KREMLIN multi level maze escape with Gremlins/bomb/3D graphics and sound/map/compass/quiet explore option!

HARMONY: infinite, saveable, 3D patterns of colour and sound, menu driven.

WORD PERFECT (friendly and versatile, full facility 40/80 column word processor [add £4 for disc version])

AMCOM'S D.F.S.

Supplied in a single 8k EPROM, this Disc filing system offers many extended features, including the ability to have:

- Up to 63 files per disc
- Up to 15 character filenames
- Read/write Acorn compatible discs
- Built in formatter
- Increased flexibility of use

Supplied complete with full manual and fitting instructions. £29.95+VAT

New games for model B

SPACE HI-WAY

A more sophisticated video game. Alien raiders which you can see in advance on the Hi-way, drop off to attack and raid your fuel reserves. Variable strength laser blasts, mutating Aliens and first rate visual and audio effects make this a really excellent game. Cassette £7.45+VAT. Disc £8.45+VAT.

ALIENSWIRL

Blast your way through swarming clouds of Aliens to reach refuelling ships, in this classic fast moving game.

WHITEWASH

In this game you must steer yourself over a grid, painting it as you go, and avoiding or destroying aliens in your way.

Both the above:— Cassette £5.95+VAT. Disc £6.95+VAT.

AMCOM, 23 Hivings Hill, Chesham, Bucks HP5 2PG. 0494 772485

For your BBC micro with Torch Disc Pack

A very special offer at £19 Excl. VAT

xForth

xForth is an advanced implementation of FORTH, the powerful yet interactive modern language used for robotics, accounts packages, editors, data base handlers and even arcade games. Many of the "Star Wars" special effects were created with it. xForth is more comprehensive and easier to use than Forth 79, while remaining compatible with it.

- The best interface you've ever seen for graphics
- A super screen editor for Forth programs
- Virtual Memory
- Full CPN file access
- Access to *FX etc. commands on your BBC micro
- Integers, fractions, strings, arrays
- Recursion

What PCW said about xForth?

"I am an xForth licence holder (and extremely happy with it)" "...excellent documentation" "...make life easier for the novice" "...very advanced extensions" In addition xForth came out first in 14 out of 15 benchmarks on Z80 Forth systems.

How to order your xForth

Most software packages only sell a few hundred, but we aim to deal in bulk, hence the incredible price of only £19. Send us this coupon by 15th July. Cheque or Access orders only.

Please Note. This package is only applicable to either a Torch Computer or a BBC micro with a Torch Disc pack.

INTERFACE

DISCOVER

The Inner Workings of the BBC Micros USER PORT

'INTERFACE' takes you through the operation of the 6522 Versatile Interface Adapter step by step.

'INTERFACE' allows you to experiment while the program monitors the registers and handles the interrupts that you generate.

'INTERFACE' is supplied on cassette with its own printed circuit board which connects directly to the USER PORT - no soldering required - any operating system.

£25.00 INCLUSIVE

ANOTHER FABULOUS B.B.C. PROGRAM FROM BRITAIN'S LEADING SOFTWARE HOUSE

Killer Gorilla

Once again, Killer Gorilla holds captive a young and beautiful heiress. Is the age of CHIVALRY dead? Answer the maiden's cries for help and scale the ironwork tower. Race along Girders, Climb Ladders, Jump Gaps, Leap onto moving Elevators and Career along Conveyors. Dodge or jump the rolling barrels or grab a hammer and smash a few. Watch out for the fireballs and iron beams hurled with animal passion. Sensational, full feature machine code arcade game with four phases, increasing difficulty and speed, bonus points and the highest standard of graphics yet achieved on the BBC micro. Only £6.95.

Other programs available: Swoop (B) £6.95/ Croaker (B) £6.95/Chess (B) £6.95/Laser Command (B) £6.95/Galactic Commander (B) £6.95/Filer £8.95/Timerak (B) £6.95/ Micro Budget £6.95/Moonreider (B) £6.95/ Berrage (B) £6.95/Beebmon (B) £6.95/The Labyrinth of La Coshe (B) £6.95/Draw (B) £8.95/World Geography (B) £5.95/ Spacemaze (B) £5.95/Munchyman £5.95/ Seek £5.95/Eldorado Gold (B) £5.95/ Dissassembler £5.95/Constellation (B) £5.95/ Junior Maths Pack (B) £5.95/Where?
